Sen. Ron Johnson (R-Wis.) <u>held a panel</u> on COVID-19 vaccines in Washington on Dec. 7, featuring experts including Dr. Robert Malone and Dr. Peter McCullough.

Experts discussed vaccine development, vaccine composition, data from insurance and adverse event systems, and other topics.

Here are four takeaways from the panel.

Insurance Experts Record Jump in Excess Mortality

Edward Dowd, a former BlackRock analyst now with the Humanity Project, showed data from the Society of Actuaries 2021 Group Life Insurance survey that showed a jump in excess mortality among young and middle-aged adults starting around the time the vaccines began being administered.

The only thing that changed at the time, Dowd said, was "vaccines and mandates."

He pointed out that Denmark and the United Kingdom, among other countries, have stopped recommending or entirely halted vaccination of young, healthy people because of growing concerns over side effects like heart inflammation that can lead to death.

"Why are our health authorities still pushing this vaccine if other countries are backing off?" Dowd asked.

Representatives from major U.S. health agencies, including the Centers for Disease Control and Prevention (CDC), were invited to the discussion but did not attend.

Josh Stirling, an insurance analyst, presented an analysis of data from the United Kingdom that concluded death rates were higher among the vaccinated as of May 2022.

Doctors Report Increase in Heart Inflammation Since Pandemic Started

Several vaccines have been linked to side effects such as myocarditis, a form of heart inflammation that can turn deadly.

Doctors testifying during the panel said they've seen an increase in patients with the inflammation.

"It's been very high," Dr. Reneta Moon, a clinical associate professor at the Washington State University College of Medicine.

Moon said she saw a handful of cases in her 20 years of practicing before the pandemic. The number has jumped since the pandemic started, she said.

Dr. Kirk Milhoan, a pediatrician based in Hawaii, said he's also seen more cases.

Milhoan said that the <u>research</u> <u>that's emerged</u> shows myocarditis and a related condition, pericarditis, are caused by the Moderna and Pfizer vaccines.

Moderna and Pfizer have not responded to requests for comment on heart inflammation.

The studies show that the spike protein, which the vaccines cause the body to make, is "cardiotoxic and cause the heart to be inflamed," Milhoan said. "Let that sink in, the current public health plan is asking our own body to make a cardiotoxin."

COVID-19 can also cause myocarditis, according to some studies, though other research has challenged that view.

Young People at Little Risk From COVID-19

Dr. Harvey Risch, a professor emeritus of epidemiology at the Yale School of Public Health, presented data from the CDC that show young people face little risk from COVID-19.

The share of infection among those aged 0 to 17 that led to death, for instance, was just 0.01 percent through September 2021, while the share was 0.05 percent among those 18 to 29.

"When you have such low or nonexistent mortality in these low age groups, the potential severe adverse effects of the vaccine will surmount the nonexistent mortality of these age groups and therefore, what we've been told, that everybody has to be vaccinated ... had no reason to be there in the first place, because there was no mortality they were trying to prevent," Risch said.

The share was much higher among older people. Among those 85 and older, for example, the share was 24.6 percent.

Because vaccines have little to no impact on transmission or infection, the only point of getting vaccinated is for treatment, but most young people "had no reason to choose that when mortality from infection is orders of magnitude is much less than from vaccination," Risch said.

No Strong Trials

As the vaccines have performed worse and worse against infection, health officials say they should still be taken to protect against severe disease.

But McCullough, chief scientific officer of The Wellness Company, said that no randomized, double-blind, placebo-controlled trial has shown the vaccines reduce hospitalization or death.

Such trials, known as RCTs, are generally considered the highest form of evidence for a drug.

Both the emergency authorization and approval for the vaccines have been on the basis of preventing infection. In fact sheets, prospective recipients are told the vaccines "have been shown to prevent COVID-19." There's no mention of severe illness or death.

Dr. David Gortler, a former official with the Food and Drug Administration, said that the best way to prove a drug has efficacy is long-term studies, which have not yet been performed on the vaccines because they're so new.

U.S. authorities currently advise virtually all Americans to get a primary series, or two doses, of a vaccine. They also say that pretty much all Americans above the age of 4 should get a booster, and that many Americans should get multiple boosters. The currently available boosters are updated, but have no.clinical.effectiveness.com/ data. About 12 percent of Americans have received one of them, according to the CDC.

The Worldwide Corona Crisis, Global Coup d'Etat Against

Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project "destroys people's lives". He provides a comprehensive analysis of everything you need to know about the "pandemic" — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

"My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the "deadly" COVID-19 "vaccine". This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument."
