[Big Tech's Effort to Silence Truth-tellers: Global Research Online Referral Campaign](#)

Oct. 2023 – Long-time Fox News Journalist 40 year old Ashley Papa was diagnosed with Stage 4 Appendix Turbo Cancer, her 2nd "rare" disease in 2 years.

[I was sworn](#) in as an official member of a club I never wanted to join last October. I'm a 40-year-old wife and mother of a toddler. I've been a [journalist with Fox News](#) for 15 years. Now, I also belong to the cancer club.

I had barely celebrated my birthday when I was told I had cancer. The diagnosis [metastatic appendiceal cancer](#). (Stage 4)

My reaction when I got the news was just what you'd expect. Everything went blank as my oncologist started rattling off these very scientific terms, the treatment plan and long list of possible side effects from chemo. *Appendix cancer? That's a thing? This useless organ did this?*

As [the diagnosis sunk in](#), along came the companion feelings of fear, despair, anger, even betrayal (how could my body do this to me?). The list still goes on. But let's go back to how it all started.

It was early June when I recall feeling some dull pains in my abdomen. It never once crossed my mind that it could be cancer. It usually never does. That's not uncommon, especially for someone as young as me.

Ashley with her husband, Jay and daughter, Sage. (Ashley Papa)

I did a little Internet self-diagnosing and chalked it up to not eating the right foods or drinking enough water and carried on with life and our summer plans.

But over the next two months, the pain slowly got worse. I have known my body for 40 years. I've known the pains of cramps, pulled muscles, broken bones, even emergency cesarean sections.

This was different.

Still, I figured it was [diet related](#), but decided to see my doctor and have HER confirm that. Her first thought also was that the symptoms were probably related to my diet. But she ordered a CT scan anyway.

Now, I often think, if she hadn't ordered that scan... Because the pain wasn't that bad, I could've just kept on dealing with the symptoms the way I had all summer — while the cancer continued to spread.

After another rare diagnosis and having to undergo emergency lung surgery during pregnancy, Ashley says she pulls a lot of her strength from her daughter, whom she calls her "angel baby." (Ashley Papa)

The evening after the CT scan, I got a call from my doctor. *'That was really fast,'* I thought seeing her number on my caller ID. She told me she wanted me to get to a gynecological oncologist as soon as possible. *It looks like ovarian cancer.* I was home alone with my daughter at the time. I went numb. It was not the call I would've ever expected.

There was a lot of fear and confusion between my husband and me that night. We didn't want to believe it was cancer. But the next day, I sent my scan to [Dr. Nicole Saphier](#), a trusted radiologist, colleague, and Fox News Medical contributor. She came close to confirming the cancer. But what kind was it, really? We were still not sure.

There was a mass on the scan, but it was hard to see exactly where it was located.

After another rare diagnosis and having to undergo emergency lung surgery during pregnancy, Ashley says she pulls a lot of her strength from her daughter, who she calls her "angel" baby. (Ashley Papa)

Within three days of that scan, I was in with an oncologist at Memorial Sloan Kettering (MSK). What followed was a month of tests, surgeries, scans and lots and lots of tears, until the official, and rare, diagnosis finally came.

Just over two years ago, when I was pregnant with my daughter, I had a [complete lung collapse](#) and ended up needing emergency lung surgery when I was six months pregnant.

It was then that I had been diagnosed with another very rare lung disease that affects women in the child-bearing years called Lymphangiomyomatosis (LAM). I just couldn't fathom that I would be hit with not one extremely rare disease, but two...and in less than two years!

I've never had more than the flu in the past four decades. How is this possible? You've got a better chance at winning the Powerball! This isn't fair!

Maybe this is related to the lung disease, my husband and I questioned and hoped, but it wasn't.

When they asked if I wanted to harvest any eggs before starting chemo, I said no. I am already so blessed to have a healthy daughter after what I went through then. Now I wanted to do everything to make sure I will be here for her. I wanted to get started with the cancer treatment right away.

I am now 7 rounds into my chemotherapy with 5 more rounds to go. What comes after, is to be determined. Likely, another surgery.

Yes, [chemo is brutal](#). But, so far, I have typically bounced back quickly. I feel fairly good in between infusions. I think I am lucky in that regard.

Right now, I can ultimately live normally for about ten days between treatments. And in those ten days of feeling fine, I live life as if I didn't have cancer, which is vital for my mental and physical health.

We make plans as a family and have little celebrations after I finish a chemo round.

Having those things to look forward to in the face of grueling treatment and this [evil disease](#) is crucial. It's like giving the middle finger to cancer, like saying to the disease, *'you're not going to stop me from living my life'*. Besides, what is the alternative?

Well, otherwise, I'd be living from treatment to treatment, in a state of constant fear and dread.

While treatment takes priority now, Ashley says being a cancer patient is still just a small part of who she is and can't wait to one day call herself a cancer conquerer. (Ashley Papa)

I believe there is a lot of truth behind the mind's ability to overpower the body.

I thank God every day—as soon as I wake up—that I am not in pain and often feel good, which enables me to continue to live life and chase around my very energetic toddler — who is currently in a phase of not wanting to ever get dressed!

Faith over fear is what I strive for. Of course, this is easier said than done and there are times my mind goes to the dark side.

Feb. 25, 2024 – Las Cruces, NM – 29 year old Sam Sigfrid was diagnosed with Appendix Cancer that didn't respond to chemotherapy treatment. It has spread to his liver.

Round 3: Help Sam (Sigfrid) fight his cancer.

Jason Smythe is organizing this fundraiser.

Las Cruces, NM

Created February 25th, 2024 ·  [Medical](#)

Hi, I am Sam's friend. This is a new fundraiser. Please read to the end. If you know him then you probably know him through the SCA. He is probably that guy that shot you with an arrow in the face plate at the war (unless you are from the Outlands, then he is probably the guy who shot you in the face at war practice.) You have probably seen his amazing videos on youtube (Sigfrid's Helmet Cam) documenting the cool things that you've done on the field before Sam shot you in the faceplate. Sam recently had his appendix removed and his doctors discovered that **he has a very rare appendix Cancer. Goblet Cell Adenocarcinoma of the appendix is so rare that only ONE in 2 million people here in the US get it. Despite the involvement of some of the best Doctors in the world, he still has cancer. Sam endured Chemo treatments twice. The cancer has spread to his liver. The standard treatment just didn't work.** Two weeks ago, Sam was given the bad news, its back, and without treatment he only has 1-3 years. Then he was given the worse news, with treatment he only has 3-5 years. Sam turned 30 this past Saturday. He is young and fit and a perfect candidate for Clinical Trials so that he can make it beyond 3-5 years. He leaves next weekend for Houston to fight for his life again. Sam is a fighter. He has got this. But once again finances are tight. This is about as direct as it gets. Please consider donating. And regardless of whether you donate, PLEASE SHARE this on your social media. Sam is a great man and a wonderful husband. Let us show him how much we care.

[Feb. 11, 2024](#) - UK - 46 year old Simon Atkins was diagnosed with Stage 4 Appendix cancer and died 2 weeks later on Feb. 11, 2024.

A "HEALTHY" dad died just two weeks after being diagnosed with an aggressive form of cancer.

Simon Atkins had been feeling bloated and nauseous but doctors assured him he was simply [constipated](#) and there was nothing to worry about.

Simon Atkins died just two weeks after being diagnosed with cancer of the appendix Credit: Sara Atkins

The dad-of-two, 46, with his wife Sara Credit: Sara Atkins

He was given laxatives and told he'd feel better in a few days.

But the 46-year-old was soon icy cold and vomiting every time he ate, and had lost so much weight he was "skin and bones".

Eventually, Simon was diagnosed with appendiceal [cancer](#) - but by then it was too late.

The dad-of-two was given two to 26 weeks to live, and died a fortnight later.

MY HELL I lived in fear as 6 relatives died of cancer & begged for UK's 1st life-savin...

His family want to use his story to educate others on the [symptoms](#) to look out for so their loved ones aren't next.

Simon's wife Sara told The Sun: "I need people to know that if they feel bloated or show any of the other signs, they need to get tested.

"Simon just got passed from pillar to post and nobody knew. Doctors just kept dismissing him.

"If I can help anybody, then something good has come out of what's happened."

Simon Atkins

Sara Atkins is organizing this fundraiser.

Hi, my name is Sara and I've just lost my husband, Simon.

He was 46 years old and we had our whole life ahead of us, it was busy but so much fun especially with our 2 young children Lucie 13 and Jacob 11.

Simon's story only started in October, the photo at the top was of our holiday in October half term.

He had stomach pain and was out of sorts but when we came home I sent him to the doctors....

They said it was a blockage and to take some laxatives.

He did this in the hope of feeling better but he was losing weight so fast.

In December on the 2nd I took him to A&E and they told us he had cancer.

From then on nothing was the same.

He was in hospital for Christmas and new year he came home.

January we saw the doctors for the diagnosis,

Simon had a rare cancer in his appendix that had spread to his abdomen and there was nothing to be done, they gave him 2 weeks to spring time.

Simon came home and we had time altogether.

On the 7th February I took him to hospital as he had gotten more poorly over night. I stayed cuddled up to him and nursed him through it all.

On 11th February just before 9am he took his last breath in this world.

I was with him every step of the way.

Jan. 9, 2024 - Mexican singer and actor best known for his role in "X-Men: Days of Future Past", 42 year old Adan Canto died suddenly on Jan. 9, 2024 after battling a very rare cancer of the Appendix.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a

relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists.
—Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. –David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it’s too late. You will not find so much valuable information and analysis in one place. –Edward Curtin
