In commemoration of the 22nd anniversary of the 9/11 attack, we repost this article by Richard Gage, first published in 2018 by AE911Truth.

According to the National Institute of Standards and Technology (NIST) — which is the U.S. government agency that investigated the World Trade Center's destruction — the Twin Towers came down "essentially in free fall."

NIST's theory of the collapses hinges on the idea that the upper section of each tower could continuously accelerate through the lower stories at nearly the rate of gravity, while in the process completely dismembering the steel frames and pulverizing nearly all of the concrete to a fine powder.

In this carefully research documentary, Richard Gage and Architects and Engineers for 9/11 Truth refute the official narrative.
