This is a controversial report based on the findings of Spanish researchers. It remains to be fully ascertained.

What is required is to have precise details on the composition of the mRNA vaccine, from one or more samples of the drug, also including the identification of the so-called digital microchip.

Independent laboratory studies based on several samples of all four major mRNA “vaccines” are required, namely AstraZeneca, BioNTech-Pfizer, Moderna Inc, Johnson and Johnson.

Statements pertaining to future impacts of the “vaccine” must be corroborated and confirmed.

Several of the statements pertaining to the dangers of the vaccine by Dr. Jane Ruby in this report are premature and cannot at this stage be corroborated.

the Spanish study must be acknowledged and taken seriously.

It should be noted that while the “fact checking” media reports deny the existence of graphene oxide in the mRNA vaccine vial, several reports confirm patent applications pertaining to the use of graphene oxide in vaccines. e.g. [Nano coronavirus recombinant vaccine taking graphene oxide as carrier](#)

Dr Jane Ruby joins Stew Peters to discuss a scientific report that just came out from the University of Almería School of Engineering in Spain entitled, “Graphene Oxide Detection in Aqueous Suspension: Observational Study in Optical and Electron Microscopy”, where it was found that each dose of the Pfizer shot “was found to contain 6 ng of RNA and 747 ng of graphene oxide, which is 99.103% of the medication.

Dr Ruby draws our attention to a 2016 study, [“Toxicity of graphene-family nanoparticles \[GFNs\]: a general review of the origins and mechanisms”](#), which found, “Several typical mechanisms underlying GFN toxicity have been revealed, for instance, physical destruction, oxidative stress, DNA damage, inflammatory response, apoptosis, autophagy, and necrosis.”

She says,

“These graphene sheets that investigators found in the Pfizer vial, when they get into your system and when they start to penetrate your cells – which they have a lipid nanoparticle that pushes them into your cells – you get oxidative stress...

“It destroys literally everything inside the cell. It explodes the mitochondria. It creates a situation where the body is on a 10-Alarm fire truck and inflammation, cytokines, chemokines. This incredibly violent...inflammatory storm comes in and it has particular affinity for creating acute inflammation of the lungs, it creates an inflammatory storm in cardiac tissue and in brain tissue.

“Stew, this is going to tie directly to strokes, to the heart attacks – and we’re giving this to pregnant mothers and babies? This is really something everybody’s gotta start paying attention to.”

Stew asks her if graphene oxide is a poison and she responds, “It is most definitely a poison.”

Stew says,

“Spanish researchers have found that over 99% of the Pfizer vaccine is graphene oxide, is that right?”

“That’s right. Stew, there’s no other reason for this to be in there except to murder people... If the rest of the companies that are pushing these jabs, all four of the companies in the US are filled with 99% of this toxic industrial chemical, I don’t know what to say to you but everybody better shut everything down right now. This is really dangerous.”

Stew replies,

“This is horrific. I get chills listening to this. I don’t know why the media’s not picking any of this up. They’re in on it. They want you dead. They’re part of the murder plot...

“OK, let me ask you question. Aside from pre-meditated murder, what might be another motivation for one to fill another person’s body, their entire make-up with this graphene oxide? What else does this stuff do, other than poison and kill people?”

She responds,

“The only other explanation I could come up with, as a scientist, myself is that this is a mass-uninformed, without-consent global experiment, because they’ve never been able to get this into humans on an experimental basis.”

Stew asks,

“When they authorized this for emergency use, the efficacy was broadcast everywhere – fake, false lies, complete lies – they said that this thing killed the coronavirus, known as COVID-19, 98.6% success rate, whatever – how can they prove that? Was that just a lie? Did they just make up an arbitrary number? Is that documented anywhere? Does thing really delete or combat the SARS-CoV-2 virus?”

She replies,

“Stew, I’m going to go back to the beginning. The PCR test is a fraud perpetrated by Christian Drosten and Olaf Landt. The coronavirus SARS-CoV-2 has never been isolated, its protein sequences have never been demonstrated or validated, no one can prove to us that it ever really existed.

“Did something exist last year? Something flying around now that’s a flu? Lots of different versions of the Common Cold? Yes, yes and yes. But no one’s ever proven or shown an isolate; verified an isolate of the SARS-CoV-2 virus. That’s number one.

“And I want to add one more thing. These Spanish researchers in the group said that when you look at the different symptoms at whatever was the SARS-CoV-2 from last year, or a few residual cases now, they are all symptoms that would also be caused by excess graphene oxide in your body: the storm in the lungs – and by the way, they’re preparing an inhalant version of this “vaccine”. And God help us, Stew, because it’s more potent, it goes right into the lungs and it creates a pulmonary storm of pneumonia right away and you’re gonna see, if they get this into Emergency Use Authorization, you’re gonna start seeing respiratory flash pneumonias and rapid deaths...

“Since the Nuremberg Trials, you cannot experiment on human beings, regardless of the drug, the disease state, you cannot do it without the approval of a Human Subjects Review Board. That’s an independent board that approves your protocol and your informed consent, which no one’s ever seen – a real informed consent about these jabs...

“There’s also some information coming in and we’re going to see more and more of it and we’re going to talk about it, of the fact that when you get your body filled with enough graphene oxide, with the warmth of your body and...if it draws the oxygen into it, that [the graphene oxide] can be manipulated and your body can be affected by...the 5G network, which we haven’t seen be completely set up and rolled-out yet and so there’s a lot of concern around that.

“At that point, it’ll just be the residual people who haven’t died of lung or heart disease from this excess toxic chemical.”
