

“Altered Genes, Twisted Truths” : A Challenge to Monsanto

Attorney Steven Druker's New Book

By [Colin Todhunter](#)

Theme: [Biotechnology and GMO](#)

In a challenge delivered to Monsanto's headquarters on May 20, 2015, US public interest attorney Steven Druker calls on that corporation to find any inaccurate statements of fact in his new book:

Altered Genes, Twisted Truth – How the Venture to Genetically Engineer Our Food Has Subverted Science, Corrupted Government, and Systematically Deceived the Public.

The thoroughly documented and referenced book exposes the substantial risks of genetically engineered foods and the multiple misrepresentations that have enabled them to permeate world markets.

Druker asserts that if Monsanto cannot prove that his book is essentially erroneous, the world will have a right to regard these controversial foods as unacceptably risky – and to promptly ban them.

‘Altered Genes, Twisted Truth’ was released in March 2015 and is the result of more than 15 years of intensive research and investigation by Druker, who initiated a lawsuit against the US Food and Drug Administration (FDA) that forced it to divulge its files on GM foods.

The book indicates that the commercialisation of GM food in the US was based on a massive fraud. The FDA files revealed that GM foods first achieved commercialisation in 1992 but only because the FDA covered up the extensive warnings of its own scientists about their dangers, lied about the facts and then violated federal food safety law by permitting these foods to be marketed without having been proven safe through standard testing.

If the FDA had heeded its own experts’ advice and publicly acknowledged their warnings that GM foods entailed higher risks than their conventional counterparts, Druker says that the GM food venture would have imploded and never gained traction anywhere.

He also argues that that many well-placed scientists have repeatedly issued misleading statements about GM foods, and so have leading scientific institutions such as the US National Academy of Sciences, the American Association for the Advancement of Science and the UK’s Royal Society.

Druker states that contrary to the claims of biotech advocates, humans have indeed been harmed by consuming the output of genetic engineering. He also explains that laboratory

animals have also suffered from eating products of genetic engineering, and well-conducted tests with GM crops have yielded many troubling results, including intestinal abnormalities, liver disturbances, and impaired immune systems.

Druker says:

“Contrary to the assertions of its proponents, the massive enterprise to reconfigure the genetic core of the world’s food supply is not based on sound science but on the systematic subversion of science – and it would collapse if subjected to an open airing of the facts.”

Now, in his open letter dated 19 May, Druker challenges Monsanto’s Chief Technology Officer to:

“Face Up to the Extensive Evidence Demonstrating that Genetically Engineered Foods Entail Unacceptable Risks and Should Be Promptly Removed from the Market.”

Druker finishes his letter by saying:

“If by July 20th you and your allies have not been able to refute the essential factual accuracy of Altered Genes, Twisted Truth according to the terms set forth above, the world will have a right to assume that it is as sound as the experts who reviewed it have affirmed – and to conclude that GE foods are unacceptably risky and must be banned.
