

Is America's Second Corona Wave a Political Hoax?

By [F. William Engdahl](#)

Global Research, July 21, 2020

For several weeks, just as most states across the United States began to reopen, following three months of lockdown to “flatten the curve”, several states including Texas and Florida began reporting record new numbers who tested positive for the coronavirus. At least that is what the world is being told. More careful investigation suggests what is unfolding as a huge manipulation of coronavirus tests that includes collusion by the national Centers for Disease Control and Prevention (CDC), the same CDC who badly bungled initial rollout of the virus tests in March by distributing tests that were found to contain traces of the virus and other serious defects. The present scandal bears the earmarks of more than mismanagement. It looks like political collusion to influence the November election and far more.

It seems that today something is very, very rotten in the State of Texas. The same for Florida, California, Arizona and many other states who just after reopening, now have again imposed lockdown and the foolish and ineffective mask-wearing and social distancing. Yet if we look at the actual data for deaths attributed to the coronavirus, since around the middle of April, the daily deaths designated of COVID-19, whether “with” or “of”, has steadily dropped to a level some 90% below the peak.

Even the highly corrupt CDC has had to admit “Nationally, levels of influenza-like illness (ILI) are low overall...Changes in indicators that track COVID-19-like illness (CLI) and laboratory confirmed SARS-CoV-2 were inconsistent during the most recent week, with some increasing but others decreasing.” Then the weekly CDC report updated 17 July, makes the following statement:

“Based on death certificate data, the percentage of deaths attributed to pneumonia, influenza or COVID-19 (PIC) decreased from 8.1% during week 27 to 6.4% during week 28, representing the twelfth week of a declining percentage of deaths due to PIC... Nationally, ILI activity remains below baseline for the thirteenth week but has increased for [5 weeks now](#).”

Note the language very closely. The CDC defines ILI as “Influenza-like Illness.” So are we talking about tests for presence of a specific virus, SARS COV-2, that is blamed for the Wuhan outbreak that apparently has spread globally since the beginning of 2020? Or is it “influenza-like” illnesses, a catchall which may or may not include the coronavirus? The CDC has cleverly lumped deaths whether from pneumonia, influenza or COVID-19 into one neat basket of death cause they call PIC- Pneumonia, Influenza or COVID-19. All PIC deaths are now conveniently designated as COVID-19 per CDC instructions on a death certificate.

Even with this sly sleight of hand, the CDC cannot hide the fact that all PIC deaths across the USA have declined for twelve weeks now. How to keep the nation in a state of fear and

lockdown longer and how to satisfy the agenda of unscrupulous Democrats who seem willing to do everything to weaken the economy to force defeat of the Republican Presidential candidate on November 3?

A 'Cases Pandemic'?

The response has been a dramatic ramping up of the number of tests on citizens for coronavirus or more precisely for an indirect test of antibodies or other signs that may or may not indicate a person has SARS COV-2. Around the middle of June as most states were rightly opening up to more normal conditions, the CDC pushed for a massive increase in testing. Naturally a dramatic increase of those tested will give an increasing number of persons who also test positive for indications of coronavirus. Just as Trump and many state governors were sensibly advocating steps to reopen, the CDC began pushing for a dramatic increase in tests. Testing went from about 150,000 to more than 700,000 per day. Reuters reported that many of the CDC-approved tests were contaminated as well.

Now the case of Texas is exemplary of what seems to be going on. According to officials in Texas in contact with former US Congressman Ron Paul, himself a medical doctor, the Texas State Department of Health Services changed the definition of what constitutes a "Covid case" in mid-May when cases were in significant decline. The new definition states, "while previously the determination of a Covid "case" was a confirmed test result, the definition was suddenly changed to count "probable" cases as "cases." At the same time, the threshold for determining "probable" was lowered to a ridiculous level." Basically if you have a fever and headache, even without a corona test, you can be [listed](#) as a "probable COVID-19 patient."

It gets worse. Based on possibly unrelated subjective criteria, up to 15 people in possible contact with that "probable" case were also listed as "probable cases." And "probable cases" were considered cases. Presto! Texas is in panic and mandatory masks and other draconian measures imposed. Further, the Texas health officials added to the fears by reporting hospitals in the state were being flooded by corona patients. Yet when contacted, Houston hospital directors themselves, said they were nowhere near actual capacity and in fact were about the same level as they were [last year](#). Texas has a Republican Governor and is a critical state for Trump in November.

Florida Too...

In Florida where the Republican Governor came under heavy media attack for allowing the beaches to open and other steps, as cases there were dramatically down in "The Sunshine State," the recent spike in corona "positive" cases is equally suspicious. A local Florida TV station became alerted when they saw a breakdown of lab tests many of which showed that 100% of all tests were "positive." The TV station contacted test labs across the state. What they found was eye-opening.

TV reporter Charles Billi noted, "We found numerous labs that are only reporting positive test results, so they show a 100-percent positivity rate. That got our attention." They located twenty-two labs that reported 100-percent positivity rates. Two labs reported 91.18-percent positivity rates. Such results suggest something rotten somewhere. Further investigation showed that many labs did not even report negative results. But when the TV journalists contacted the various labs to question the shocking numbers, data suspiciously

changed. One lab, Orlando Health, had a 98 percent positivity rate. “However, when FOX 35 News contacted the hospital, they confirmed errors in the report. Orlando Health’s positivity rate is only 9.4 percent, not 98 percent as in the report.” Similarly, Orlando Veteran’s Medical Center had a positivity rate of 76 percent. “A spokesperson for the VA told FOX 35 News on Tuesday that this does not reflect their numbers and that the positivity rate for the center is [actually 6 percent](#).” That is a huge difference.

No surprise that COVID-19 “infections” showed an alarming rise in Florida in recent weeks. As of July 14 Florida state health officials had not replied to requests from the journalists for [comment](#).

Citing a dramatic rise in corona positive tested persons, California Democrat governor Gavin Newsome on July 14 reversed his decision to allow reopening of schools, offices, public malls and churches, though protest marches like Antifa or BLM are permitted, it seems. That decision in a state of 40 million and the largest state economy, will deal a severe blow to any USA economic recovery before November. Democrat Governor Gavin Newsom last month ordered that ballots be mailed to all of California’s 20.6 million voters for the Nov. 3 general election.

Changed Narrative

These cases indicate the huge, stinking miasma surrounding the entire subject of risk to the American population from SARS COV-2 and a political agenda that could have ominous consequences for the democratic process in America.

The influential political forces backing the NIH guru Tony “trust science” Fauci- who has been consistently wrong in his advice, but always pushing the most draconian lockdowns and testing and vaccines—clearly are trying to continue the destructive lockdown until the November US elections. They seem willing to engage in any and every manipulation and panic promotion to do that. Now they have simply changed the narrative. Three months ago Fauci and others said the goal of the lockdowns and social distancing—something never before done in modern public health—was to “flatten the curve” of new coronavirus cases so hospitals would not be overloaded. That overload rarely happened. Now with hospitals nearly empty across the nation, the narrative has shifted to the meaningless number “new coronavirus cases,” which in fact mean new numbers tested with tests whose reliability has repeatedly been called “unsatisfactory” or worse.

Stanford University’s Dr. John Ioannidis points out that the COVID-19 fatality rate for those under the age of 45 is “almost zero,” and between the ages of 45 and 70, it’s somewhere between 0.05% and 0.3%. So, the fact that young and middle-aged adults are testing positive in large numbers is not a warning sign of an impending onslaught of deaths, as the risk of death in these age groups is minuscule. The COVID19 Curve has been “flattened.” Politics is steering the USA COVID-19 events, but not the politics Fauci and the Governor of California claim. This could have catastrophic social and economic consequences if it continues.

Seeds of Destruction: Hidden Agenda of Genetic Manipulation

Author Name: F. William Engdahl

ISBN Number: 978-0-937147-2-2

Year: 2007

Pages: 341 pages with complete index

List Price: \$25.95

Special Price: \$18.00

This skilfully researched book focuses on how a small socio-political American elite seeks to establish control over the very basis of human survival: the provision of our daily bread. “Control the food and you control the people.”

This is no ordinary book about the perils of GMO. Engdahl takes the reader inside the corridors of power, into the backrooms of the science labs, behind closed doors in the corporate boardrooms.

The author cogently reveals a diabolical world of profit-driven political intrigue, government corruption and coercion, where genetic manipulation and the patenting of life forms are used to gain worldwide control over food production. If the book often reads as a crime story, that should come as no surprise. For that is what it is.
