This question is invited by news reports that they are preventing the use of the anti-malaria drugs chloroquine and hydroxychloroquine to treat coronavirus patients. According to experts, the anti-malaria drugs are effective if used early enough in the infection. But the drugs are cheap and there is no profit in them.

As of Tuesday, New York hospitals have federal permission to give desperately ill patients a cocktail of hydroxychloroquine and azithromycin on a “compassionate care” basis.

According to the world’s leading expert, Didier Raoult (image on the right), it is too late to give the anti-malarial drugs in the latter stage of the infection, see [this](#).

Fauci says there is no substantive proof that the drugs are effective, but the Chinese and Didier Raoult, who is far more prominent than Fauci, say otherwise.
