Bill Gates has quietly made himself the largest owner of farmland in the United States. For a man obsessed with monopoly control, the opportunity to also dominate food production must seem irresistible.

“Gates has a Napoleonic concept of himself, an appetite that derives from power and unalloyed success, with no leavening hard experience, no reverses.” — Judge Thomas Penfield Jackson, presiding judge in the Gates/Microsoft antitrust-fraud case

The global lockdowns that Bill Gates helped [orchestrate and cheerlead](#) have bankrupted more than [100,000 businesses](#) in the U.S. alone and [plunged a billion people](#) into poverty and deadly food insecurity that, among other devastating harms, [kill 10,000 African children monthly](#) — while increasing Gates’ wealth by [\\$20 billion](#). [His \\$133 billion fortune](#) makes him the world’s [fourth wealthiest man](#).

Gates has been using that newfound cash to expand his power over global populations by buying devalued assets at fire-sale prices and maneuvering for monopoly control over [public health](#), [privatizing prisons](#), [online education](#) and [global communications](#) while [promoting digital currencies](#), [high tech surveillance](#), [data harvesting systems](#) and [artificial intelligence](#).

For a man obsessed with monopoly control, the opportunity to also dominate food production must seem irresistible.

According to the newest issue of [The Land Report](#), Gates has quietly made himself the largest owner of farmland in the United States. Gates’ portfolio now comprises about [242,000 acres of American farmland](#) and nearly [27,000 acres of other land](#) across Louisiana, Arkansas, Nebraska, Arizona, Florida, Washington [and 18 other states](#).

Thomas Jefferson believed that the success of America’s exemplary struggle to supplant the yoke of European feudalism with a noble experiment in self-governance depended on the perpetual control of the nation’s land base by tens of thousands of independent farmers,

each with a stake in our democracy.

So at best, Gates' campaign to scarf up America's agricultural real estate is a signal that feudalism may again be in vogue. At worst, his buying spree is a harbinger of something far more alarming — the control of global food supplies by a power-hungry megalomaniac with a Napoleon complex.

Let's explore the context of Gates' stealth purchases as part of his long-term strategy of mastery over agriculture and food production globally.

Beginning in 1994, Gates launched an [international biopiracy campaign](#) to achieve vertically integrated dominion over global agricultural production. His empire now includes vast agricultural lands and hefty investments in [GMO crops](#), [seed patents](#), [synthetic foods](#), artificial intelligence including robotic farm workers, and commanding positions in food behemoths including [Coca-Cola](#), [Unilever](#), Philip Morris ([Kraft](#), [General Foods](#)), [Kellogg's](#), [Procter & Gamble](#) and [Amazon](#) (Whole Foods), and in multinationals like [Monsanto and Bayer](#) that market [chemical pesticides](#) and petrochemical fertilizers.

As usual, Gates coordinates these personal investments with taxpayer-subsidized grants from the Bill & Melinda Gates Foundation, the [richest and most powerful](#) organization in all of international aid, his financial partnerships with [Big Ag](#), [Big Chemical](#), and [Big Food](#), and his control of international agencies — including some of his own creation — with awesome power to create captive markets for his products.

Former Secretary of State Henry Kissinger, a protégé and partner to David Rockefeller, observed that, "[Who controls the food supply controls the people.](#)" In 2006, the Bill & Melinda Gates and Rockefeller Foundations launched the [\\$424 million Alliance for a Green Revolution in Africa \(AGRA\)](#) promising to double crop productivity and boost incomes for [30 million small farmers by 2020](#) while cutting food insecurity in half.

Characteristically, Gates' approach to global problems put technology and his chemical, pharmaceutical and oil industry partners at the center of every solution. As it turned out, Gates' "innovative strategy" for food production was to force America's failed system of [GMO, chemical and fossil fuel-based agriculture](#) on [poor African farmers](#).

African agricultural practices have evolved from the land over 10,000 years in forms that promote crop diversity, decentralization, sustainability, private property, self-organization and local control of seeds. The personal freedom inherent in these localized systems leaves farm families making their own decisions: the masters on their lands, the sovereigns of their destinies. Continuous innovation by millions of small farmers maximized sustainable yields and biodiversity.

In his ruthless reinvention of colonialism, Gates spent [\\$4.9 billion dollars](#) to dismantle this ancient system and replace it with high-tech corporatized and industrialized agriculture, chemically dependent monocultures, extreme centralization and top-down control. He forced small African farms to transition to [imported commercial seeds](#), [petroleum fertilizers](#) and [pesticides](#).

Gates built the supply chain infrastructure for chemicals and seeds and [pressured African governments](#) to spend huge sums on subsidies and to use draconian penalties and authoritarian control to force farmers to buy his expensive inputs and comply with his

diktats. Gates made farmers replace traditional nutritious subsistence crops like sorghum, millet, sweet potato and cassava with high-yield industrial cash crops, [like soy and corn](#), which benefit elite commodity traders but leave poor Africans with little to eat. Both nutrition and productivity plummeted. [Soils grew more acidic](#) with every application of petrochemical fertilizers.

As with Gates' African vaccine enterprise, there was neither internal evaluation nor public accountability. The 2020 study "[False Promises: The Alliance for a Green Revolution in Africa \(AGRA\)](#)" is the report card on the Gates' cartel's 14-year effort. The investigation concludes that the number of Africans suffering [extreme hunger has increased by 30 percent](#) in the 18 countries that Gates targeted. Rural poverty has metastasized dramatically, and the number of hungry people in these nations has risen to [131 million](#).

Under Gates' plantation system, Africa's rural populations have become [slaves on their own land](#) to a tyrannical serfdom of high-tech inputs, mechanization, rigid schedules, burdensome conditionalities, credits and subsidies that are the defining features of Bill Gates' "Green Revolution."

The only entities benefiting from Gates' program are his international corporate partners — and particularly Monsanto, in which the Gates Foundation Trust purchased [500,000 shares worth \\$23 million](#) in 2010 (but later divested those shares after pressure from civil society groups). Gates himself even [filmed commercials for Monsanto's GMOs](#), touting them as the "solution" to world hunger.

In a typical example of Gates' strange largess, his foundation apparently made his taxpayer-subsidized "charitable" grants amounting to [\\$10 million to the Big Ag behemoth, Cargill](#), to build his supply chains for GMO soy in South Africa. Africans call Gates' program "[Neocolonialism](#)" or "[Corporate Colonialism](#)."

The AGRA Watch initiative of Seattle-based Community Alliance for Global Justice follows Gates' agricultural and food policies. According to Heather Day, an AGRA Watch spokesperson, AGRA is a trojan horse for corporate kleptocracy.

"The Gates Foundation and AGRA claim to be 'pro-farmer,' 'pro-poor' and 'pro-environment,'" Day told me. "But [their approach is closely aligned](#) with transnational corporations, like Monsanto, and foreign policy actors like USAID [United States Agency for International Development]. They take advantage of food and global climate crises to promote high-tech, centralized, industrial agriculture that [generate profits for Gates' corporate partners](#) while degrading the environment and disempowering farmers. Their programs are a dark form of [philanthrocapitalism](#) based on biopiracy and corporate biopiracy."

Gates' climate activism (A memo to my environmental colleagues)

To cloak his dystopian plans for humanity in benign intentions, Gates has expropriated the rhetoric of "sustainability," "biodiversity," "good stewardship" and "climate." These causes are all grim realities that pose existential threats to our children and require urgent attention. However, Gates' record exposes his benevolent intentions as masquerades for his agenda to maximize personal profit and control.

It's baffling to me how so many of my friends in the environmental movement have

swallowed Gates' chicanery. In my 40 years as a climate activist, I saw zero evidence of Gates' funding of genuine climate advocacy; the Gates Foundation is AWOL in the climate wars.

The leading climate groups, National Resource Defense Council, Environmental Defense Fund, Sierra Club, Greenpeace, Waterkeepers, etc., receive virtually nothing from the world's largest philanthropy. His investment history suggests that the climate crisis, for Gates and his cronies, is no more than an alibi for intrusive social control, "[Great Reset](#)"-[scale surveillance](#), and massive science fiction [geoengineering](#) boondoggles, including his demented and terrifying vanity projects to [spray the stratosphere with calcium chloride or seawater](#) to slow warming, to [deploy giant balloons](#) to saturate our atmosphere with reflective particles to [blot out the sun](#), or his perilous gambit of releasing [millions of genetically modified mosquitoes](#) in South Florida.

When we place these nightmare schemes in context alongside the battery of experimental vaccines he forces on [161 million African children annually](#), it's pretty clear that Gates regards us all as his lab rats.

Gates has also heeded Kissinger's advice, "[Control oil and you control nations](#);" his energy holdings nowhere reflect his expressed antipathy for [greenhouse gases](#). Gates' personal investments in hydrocarbons include massive stakes in all the oil majors: [Exxon, Chevron, ConocoPhillips and Shell](#). He owns the world's [largest private jet company](#). His outsized commitment to coal includes giant investments in the dirtiest coal-generating fleets including the [Canadian National Railway](#) and [CSX Richmond](#) which is [the largest coal transporter east of the Mississippi River](#). Gates is betting big on the future of carbon.

Gates' energy-hungry [data harvesting, processing and analytics centers](#) are among the world's fastest-growing sources of exploding energy demand. And, of course, Gates' chemical/industrial agriculture enterprises are the antithesis of climate-friendly. His GMO corn requires heavy applications of [fertilizers, pesticides, agro-chemicals made from natural gas and other fossil-fuel inputs](#). He effectively forced Africans, in Michael Pollan's words, to "[eat oil](#)." African farmers call Gates' program "[climate-stupid agriculture](#)."

Gates has learned to fatten himself on global crises, whether it's pandemics, climate, famine or mass extinction. Climate change has given Gates an excuse to create monopolies over seed, food and agriculture.

In 2008, the Bill & Melinda Gates Foundation announced [\\$306 million in grants](#) to promote high-yield sustainable agriculture among smallholder farmers in [sub-Saharan Africa and South Asia](#). The foundation's plans included creation, through genetic manipulation, of [high-production, drought-resistant dairy cows](#), and the development and proliferation of [super crops](#) resistant to climate change.

In other words, climate change was the guise for more mischievous geoengineering. Meanwhile, Gates' ag policies are [destroying our planet's climate systems](#), pushing millions of species to extinction, desertifying the soil, destroying water systems and [enriching the Poison Cartel](#).

So, a note to my fellow environmental leaders: Bill Gates is not our amigo! Furthermore, Gates has put climate reform in malodour with millions of Americans, who see his climate pretenses in context of his ambitions to control humanity and put an end to economic

activity and personal freedom.

It's largely Gates' doing that half of America sees climate change as either a "Great Reset" flimflam to shift wealth upward, or a geoengineering boondoggle. It's on them that they don't recognize the serious peril of climate change. It's on us that we seem deliberately blinded to the peril of Bill Gates.

Gates profits from all this confusion; the polarization of the climate debate paralyzes reform efforts thereby preserving the value of his carbon stakes. We all need to recognize who is really behind that Green mask!

Biopiracy

"A nation that destroys its soils destroys itself." — President Franklin D. Roosevelt's letter to all state governors, February 1937

Long experience and research have shown that agroecology based on [biodiversity](#), Seed Freedom and Food Freedom is essential not just to civil liberties and democracy, but to the future of food and farming.

For thousands of years, farmers' innovation and biodiversity evolved together to create the most efficient practices for sustainable food production and biodiversity. [The United Nations' seminal 2009](#) study by the International Assessment of Agricultural Knowledge, Science and Technology for Development ([IAASTD](#)) documents the incontrovertible evidence demonstrating the abject failure of the Gates/Rockefeller "Green Revolution" to improve on traditional agriculture.

IAASTD deployed a team of [900 leading scientists, agronomists, and researchers](#) to study the issue of world hunger. [Their comprehensive and definitive report](#) showed that GMO crops are not the answer to food shortfalls or rural poverty. That report definitively concludes that neither Gates' Green Revolution nor his GMOs can feed the world and at the same time protect the planet.

[IAASTD's comprehensive analysis](#) demonstrates that the Green Revolution that the Rockefeller Foundation launched in India and Mexico in the 1960s was a catastrophe; the chemical path of monocultures has undermined Earth's capacity to support life and food production by [destroying biodiversity, soil and water, as well as contributing to climate change](#).

Green Revolution policies subvert food and nutritional security, and dispossess small farmers through debt for external inputs. IAASTD and [numerous other studies](#) show that [Seed Sovereignty](#), [Food Sovereignty](#) and [Knowledge Sovereignty](#) are the only viable future for food and farming. The United Nations and the world's top agricultural scientists have admitted that [GMOs cannot fight hunger](#) as effectively as traditional farming.

Bill Gates has opted to ignore this reality, dismissing science-based evidence in favor of his messianic faith that he is ordained by God to save the world with technology. According to Dr. Gates, M.D., good health only comes in a syringe ([he is the world's biggest vaccine producer](#)).

Likewise, Farmer Bill preaches that good food only comes from monocultures, chemical pesticides and fertilizers, GMO crops and [patented seeds that he happens to own](#). In

constructing his agriculture empire, Gates has repeatedly shown himself willing to ignore the voices of scientists and farmers, and to trample laws, treaties, traditions, civil rights, science, and sensibilities.

Stealing seeds

Since the onset of the [Neolithic Revolution some 10,000 years ago](#), farmers and communities have worked to improve yield, taste, nutrition, robust seed qualities that enhance peculiar growth, medicinal and nutritional attributes, and the genetic resilience that allows certain seeds to flourish in particular soil and water conditions or resist predators.

These vigorous, ingenious genetics are the products of a miraculous collaboration between humans, nature and their Creator during humanity's 1,000 generations of intense agricultural innovation. The free exchange of knowledge and seeds among farmers has been the basis for maintaining biodiversity and food security.

Since 1979, under World Bank auspices, a consortium of agricultural research centers known as the [Consultative Group on International Agricultural Research](#) (CGIAR) has been collecting these premier seeds from small farmers across the globe and preserving them in 15 independent Public Seed Banks stationed in different countries. That venture sought to archive a complete inventory of heritage seed stocks for the benefit of all humanity so as to preserve crop diversity for the millennia.

In the last 17 years, Gates has successfully maneuvered to gain control of those collections — [comprising 768,578 seeds](#) — and to assert monopoly ownership of the world's premier seed inventories.

Beginning in 2003, working in coordination with the Rockefeller Foundation, the Bill & Melinda Gates Foundation pumped [\\$720 million into CGIAR's Seed Bank](#) project. As the largest funder of the CGIAR, Gates used his financial leverage to force the merger of the CGIAR's 15 legally independent centers into one legal entity, a sinister initiative that he calls "[Gates Ag One](#)." He then moved to orchestrate the transfer of research and seeds from scientific research institutions to commodity-based corporations like [Bayer and Cargill](#) with which he partners. In this way he is raiding, plundering and privatizing the seed stockpile for the most promising seeds from indigenous farmers around the world.

Gates Ag One's director, [Joe Cornelius](#), is a former executive at [Bayer Crop Science](#). Prior to that, he was [Monsanto's Director of International Development](#). Working with Cornelius, Gates has perfected the techniques Monsanto pioneered in the 1980s when it led the push to propagate GMOs, and to patent seeds. Gates has made himself the Commanding General in Big Data's pirate war to plunder and monopolize the common genomic data of millions of plants bred by peasants over the millennia.

Gates funds [Diversity Seek \(DivSeek\)](#), a global project he launched in 2015 to map the genomes and genome sequences of the peasant seed stocks held in seed banks. DivSeek and Gates Ag One are the tips of his spears, "mining" seed data to "censor" out the commons. In other words — to terminate the public's ownership claims.

Using artificial intelligence (AI) and digital technologies, Gates' minions at DivSeek and Gates AG One scan these seeds and categorize their genetic data to map, patent and pilfer

humanity's global seedstock heritage. Gates bolsters his patent rationale by using [CRISPR technology](#) to selectively edit the heritage seed genomes, making changes sufficient to withstand patent challenges.

Gates' principal objective is to breed [Green Revolution](#) varieties engineered to respond to chemical inputs produced by Gates' "[Poison Cartel](#)" partners: Monsanto, Bayer, Dow/DuPont, CropLife, BASF, Syngenta, Corteva, etc. In short, Gates deliberately [robs the seed of its integrity and diversity, erasing evolutionary history and its links to the soil](#), reducing it all to a simple "code." In this way, Gates captures our planet's genetic diversity, rewrites it, patents its code, steals the seeds from humanity and marries them off to the chemical conglomerates.

By centralizing the Seed Banks and manipulating intellectual property laws, Gates has launched a campaign of "genetic colonialism" to [rob the world's peasants and indigenous farmers](#) of their hard-earned seeds and knowledge.

"Gates Ag One's aim is to take control over the genetic diversity of this planet," agricultural freedom activist [Dr. Vandana Shiva](#) told me. According to Shiva, Gates "continues to subvert and sabotage both farmers' seed sovereignty and the seed sovereignty of countries. 'Gates Ag One' is a clear declaration of his intent to create an empire over life and biodiversity, over food and farming, and over our sustenance." In the process, says Shiva, "Gates is financing infernal Frankenstein experiments that defile God's creation."

Citizens, governments and farm organizations have written many laws and governments have adopted international treaties on biodiversity protection, including the [Convention on Biological Diversity](#) (CBD) and the [Cartagena Biosafety Protocol](#) to the CBD. By conning government officials, manipulating intellectual property law and rewriting seed regulations, Gates has been able to [bypass or trample](#) these statutes and treaties, and to evade the multilateral governance structures that governments put in place to prevent global corporations from hijacking the planet's biodiversity and the seed commonwealth of peasants and farmers.

Genetically modified organisms (GMOs)

Gates' missionary faith in technology as the solution for every human ill, from food insecurity and disease to climate health, explains his obsessive promotion of GMOs. Gates' [zealous GMOs idolatry](#) and [gene-editing technologies](#) leave him deaf to the mountains of peer-reviewed scientific evidence and warnings by agronomists, nutritionists, toxicologists and other scientists who question their safety.

GMO vaccines and medicines are mainstays of his public health enterprise, and Gates finances research, development and proliferation of GMOs as the fix for every agricultural problem. [He funded](#), for example, [Emmanuelle Charpentier and Jennifer Doudna](#), the two CRISPR chemists who won 2020 Nobel prizes for gene editing.

Gates was also [one of the largest shareholders of Monsanto](#) — the world's most aggressive promoter of GMOs and pesticides. The central mission of Gates Ag One is to fly into the face of virtually every independent science and safety assessment in a blind rush to impose Gates' untested GMOs, patented seeds, synthetic foods and experimental medicines on humanity.

One might expect his Monsanto stake and his partnerships with [processed food](#), chemical and oil companies to discredit Gates' pretensions as a public health advocate. But Gates' massive investments in media journalism (a March 2020 [Nation magazine exposé](#) reveals the Gates Foundation has bought Gates guarantees of favorable coverage with [\\$250 million in grants to media outlets](#) including [NBC/Universal](#), [BBC](#), [NPR](#), [The Guardian](#), [Le Mond](#), [Al Jazeera](#), and others "to influence the news") have insulated him from the scrutiny and skepticism the media historically applied to fiendish profiteering schemes and rank hypocrisy by power-mad billionaires.

Money talks, and the [billions that Gates and his pharma allies](#) annually pour into public and commercial journalism have instead made Gates the media's chief darling. He uses his biweekly "satellite tours" of leading cable and network news shows to showcase his mesmerizing power to command softball questioning and fawning deference from obsequious hosts (with the exception of [Norah O'Donnell](#)) including [Anderson Cooper](#) (CNN), [David Muir](#) (ABC), [Ari Melber](#) (MSNBC), and [Chuck Todd](#) (NBC), who gratefully entertain his lofty prognostication on topics ranging from public health to the economy and agriculture policy.

Evading government regulation

Gates' wealth and power also allow him to evade government efforts to regulate GMO proliferation. In 2011, when India introduced a moratorium on Gates' genetically modified [Bt Cotton](#) and [Roundup Ready](#) crops, Gates shifted his operations to [Bangladesh](#). When the [European Court of Justice](#) ruled that gene-edited organisms and GMOs must be heavily regulated to protect public health, Gates launched a [lobbying campaign for deregulation across the European community](#).

Gates is currently deploying his billions to orchestrate attacks against GMO and gene editing laws in many of the countries that have imposed safety standards. When scientists and regulators plead that time is essential to accurately assess the safety of gene editing and GMOs, [Gates declares](#) that "Time is the enemy!"

In 2017, a German human rights group, [Heinrich Böll Stiftung \(HBS\)](#), published evidence of a Gates' secretive campaign to evade democratically imposed restraints on his high-risk gene manipulation experiments. HBS released more than [1,200 emails](#) the group obtained under U.S. Freedom of Information laws. Those documents show that the Bill & Melinda Gates Foundation [hired a shady Big Ag/Biotech spy](#) and propaganda outfit to mount an [undercover espionage attack](#) aimed at corrupting United Nations officials and sabotaging international efforts to ban a diabolical new technology called "gene drive."

[Gene drives](#) are at the cutting edge of genetic engineering, synthetic biology and gene editing. They are the tools of choice for eugenicists and for those seeking to build the technocratic "transhuman future" [championed by Gates](#) and his Silicon Valley cronies.

Scientists use [CRISPR technology to edit genes](#) into an organism's chromosomes to reprogram DNA to switch off the normal rules of genetic inheritance and "drive" the artificially introduced trait through an entire population and spread it to all future generations. Their capacity to permanently alter the genome of an entire species makes gene drives the biological instrument of ultimate power.

Gene-editing technology could facilitate Gates' schemes to create and patent new-and-

improved species of plants and animals, or to [exterminate species](#) of which he disapproves. One of his aims is to use gene drives to insert "[suicide genes](#)" to eradicate entire mosquito species that spread Zika or malaria — a goal of the [Target Malaria Project](#), in which the Gates Foundation has invested [\\$40 million](#). [Dr. Anthony Fauci](#), a long-time protégé and partner of Gates and an enthusiastic cheerleader for gene drive, told [StatNews](#), "Getting rid of them would be a blessing."

Critics argue that gene drives pose an [existential biosecurity risk](#) to humanity due to their capacity to change or eliminate entire species and to catastrophically alter ecosystems. They are, also, the [ultimate biological weapon](#); the most satanic minds in various military and intelligence agencies covet gene drives to breed [supersoldiers](#) or to mint "apocalypse genes." Critics fear that nations might one day use "genocide genes" [to eradicate certain races or undesirable traits](#).

HBS's Gene Drive Files expose the leading role of the U.S. military in the development of gene drive technology. The U.S. Defense Advanced Research Projects Agency (DARPA) has spent [approximately \\$100 million](#) researching gene drives. The other primary Gene Drive investors are Dr. Fauci's [National Institutes of Health](#) (NIH), and the Bill & Melinda Gates Foundation, which has invested [\\$75 million](#) in researching suicide and anti-fertility genes.

At the [2016 United Nations Convention on Biological Diversity](#) (COP 13) in Cancun, 179 international organizations, including the Heinrich Böll Foundation, voted for the UN to impose a global moratorium on gene drives. The opponents of this technology also [circulated a letter](#), "A Call for Conservation with a Conscience: No Place for Gene Drives in Conservation." Environmentalists worry about unintended consequences if suicide or extinction genes leap species.

The Gene Drive emails reveal that in reaction to the COP 13 resolution, the Gates Foundation [hired "Emerging Ag,"](#) a sketchy espionage concern with its own sinister entanglements with Big Pharma and Big Ag, to sabotage and shut down the diverse and unified international coalition opposing gene drive.

The Gates Foundation gave Emerging Ag [\\$1.6 million](#) to "recruit a covert coalition of academics to manipulate the UN decision-making process over gene drives." The emails reveal that the Gates' campaign was part of the billionaire's plan to "[fight back](#) against gene drive moratorium proponents." Emerging Ag secretly mobilized some [65 allegedly "independent scientists"](#) for hire — "Biostitutes," in the industry vernacular — and public officials to an online expert group, the [UN CBD Online Forum on Synthetic Biology](#). A senior executive of the Gates Foundation provided these crooked operatives with [daily instructions](#) on how to sabotage regulations, undermine the science, discredit advocates, corrupt the process, and subvert democracy.

In furtherance of its campaign, Gates simultaneously funded a 2016 report by the U.S. National Academy of Sciences endorsing gene driving. The DARPA co-funded the whitewash report with the Gates Foundation. [As The Guardian noted](#) after the release of the NAS report:

"The same US defense research agency (DARPA) who paid for the NAS study have made it known that they are going all-in on gene drive research and development of 'robust' synthetic organisms. There is good reason to be worried."

As Jim Thomas of the ETC Group [observed](#): “The fact that gene drive development is now being primarily funded and structured by the US military raises alarming questions about this entire field.”

In furtherance of its coordinated campaign with Emerging Ag, the Gates Foundation manipulated three members, who were under Gates’ control, of the relevant UN expert committee known as [AHTEG \(Ad Hoc Technical Expert Group\)](#) on Synthetic Biology. Gates and Emerging Ag were successful and the UN shot down the moratorium.

The Gates Foundation’s role, exposed by the Gene Drives files, [in subverting the environmental movement’s campaign against this dangerous technology](#) confirms Gates and his foundation as a rogue outlaw cartel with contempt for process, for democracy, for science, law, public opinion, public health and the safety of humanity.

Chemical warfare on human health

Mounting evidence points to the kind of industrially grown and [processed foods](#) that Gates favors as leading culprits in the chronic disease epidemics that are devastating human health and debilitating children across the globe.

The world’s most popular GMOs function to facilitate aerial spraying of [pesticides](#). Monsanto’s technique of inserting genes to make agricultural crops resistant to weed-killing poisons allows Big Ag to [fire ground-based farm workers](#), replacing them with airplanes (or drones) that saturate landscapes (and food) with aerosolized toxins like [glyphosate](#) and [neonicotinoids](#).

Since the proliferation of chemical pesticides in the 1940s, [more than half](#) of American songbirds have disappeared, most of the world’s [bee and insect populations have collapsed](#) and chronic disease rates in America have risen to [54%](#) in lockstep with increased pesticide use.

As Vandana Shiva pointed out, “Gates has declared chemical warfare not just on nature but on our body’s metabolic systems and the symbiosis in the [gut microbiome](#) with his pesticides and herbicides obsession, and his campaign to switch humanity to GMOs.”

Synthetic foods: soylent ‘Gates’

“Diet, injections, and injunctions will combine, from a very early age, to produce the sort of character and the sort of beliefs that the authorities consider desirable, and any serious criticism of the powers that be will become psychologically impossible.” — CIA propagandist Bertrand Russell, an advocate of one world government, dictatorship, and top-down control of the masses by a privileged oligarchal class ([1952](#)).

Gates’ power, profit and control agenda appears to drive his commitment to synthesize so-called “transhuman” laboratory foods and his massive investments in processed food manufacturing.

[Gates calls synthetic meat](#) “the future of food.” He holds investments in companies that make plant-based chicken, eggs and others that make food from bugs. Gates owns patents or has patents pending for over 100 animal proxies, from chicken to fish. He is [invested](#)

[heavily](#) in Motif FoodWorks, a company that makes a variety of synthesized laboratory foods and ingredients. He [co-founded Breakthrough Energy](#) in 2015 with his billionaire buddies [Jeff Bezos, Michael Bloomberg and Mark Zuckerberg](#) — the so-called “Pandemic Profiteers Club.” (U.S. billionaires have [increased their wealth by \\$1.1 trillion](#) since the lockdown began, while the number of impoverished Americans [grew by 8 million](#).)

That collaboration has large stakes in Beyond Meat, which they [co-own with Tyson Foods](#) and Cargill. [Beyond Meat](#) makes plant-based GMO and pesticide-laden chicken tacos. Gates and his Billionaire Boys Club also have big positions in [Impossible Foods](#), which uses heat and pressure to produce [synthetic burgers and bratwurst from GMO soy](#). Lab results [show](#) the company’s imitation meat contained glyphosate levels 11 times higher than its closest competitor. Seth Itzkan from [Soil4Climate](#) wrote:

“Impossible Foods should really be called ‘Impossible Patents.’ It’s not food; it’s software, intellectual property — 14 patents, in fact, in each bite of Impossible Burger. It’s IFood, the next killer app. Just download your flavor. This is its likely appeal to Bill Gates, their über investor.”

Another of Breakthrough’s ventures is [Memphis Meats](#), which formulates an engineered meat-like tissue on a substrate of calf’s blood. A bullish [Bloomberg predicts](#) that synthetic meat revenues will reach [\\$3.5 billion by 2026](#).

In June 2020, the “Breakthrough Bros” invested \$3.5 million in [Biomilq](#), a company that produces synthetic breast milk from “cultured human mammary glands and epithelial cells.” Gates has not explained whether the milk will contain the maternal antibodies — [present in authentic mother’s milk](#) — that function to protect infants from infectious diseases, or whether the coming generations of Biomilq kids will need to rely, instead, on additional batteries of Gates’ GMO vaccines.

Unimpressed, Vandana Shiva observes that Bill Gates “wants to deprive us of good, healthy proteins and fats and get us hooked on his synthetic lab-grown trash.”

Gates is the [creator and largest donor](#) to the United Nations’ subsidiary, GAVI, a faux governmental agency that he created to push his diabolical chemical, medical and food concoctions, and conduct villainous [vaccine experiments](#) on Africans and Indians. Since 2014, [The Food and Agriculture Organization of the United Nations, funded by the Gates Foundation](#) in the amount of [almost \\$850K](#) has aggressively pushed the use of insect protein — particularly for the poor. GAVI characterizes wasps, beetles, crickets and other insects as “underutilized” food sources.

Following Gates’ lead, GAVI is optimistic that bugs will soon be an important food supplement for impoverished and undernourished children.

Perhaps in anticipation of that happy day, the Gates Foundation has invested in [a South African company](#) that makes edible protein from cultivated maggots. The company’s factory houses a billion flies and produces 22 tons of maggots daily that graze on slaughterhouse, municipal and household waste. Since markets are still immature for maggots as human food, [Gates sells his maggot-meal](#) to factory meat operations like those owned by Gates’ partner, Tyson Foods, to feed [battery-caged chickens](#), and to large-scale fish farms, like those owned by [Unilever, a \\$58 billion multinational](#), which is both a business partner to Gates and a grant beneficiary of his peculiar public charity.

As usual, Gates has also mobilized the international agencies that he controls and the large corporations with which he partners to drive his fake food agenda including, most notably, The Gates-funded [World Economic Forum](#) (WEF), which assembles the world's billionaires in Davos each year to plan and plot out humanity's political and economic future.

WEF's Chairman, [Klaus Schwab](#), is the author of the [influential book](#), "COVID-19: The Great Reset", which WEF has apparently mailed to most of [the world's elected officials, down to provincial executives](#).

Schwab makes the case that powerful people should use the COVID crisis to impose authoritarian controls, pervasive surveillance, oppressive new economic models and one-world government on a beleaguered, terrified and compliant humanity. The Great Reset is WEF's plan to rebuild a new controlled economy systematically after the COVID-19 pandemic.

Schwab and Prince Charles [unveiled "The Great Reset"](#) at a WEF summit in May 2020. It is a vision for transferring the world into a totalitarian and authoritarian surveillance state manipulated by technocrats to manage traumatized populations, to shift wealth upward, and serve the interests of elite billionaire oligarchs. To "reset" global food policies, the WEF has promoted and partnered with an organization called [EAT Forum](#), which describes itself as the "Davos for food."

[EAT's co-founder is Wellcome Trust](#), an organization founded, funded by and strategically linked to vaccine maker GlaxoSmithKline, in which [Gates is heavily invested](#). EAT's biggest initiative is called [FReSH](#), which the organization describes as an effort to drive the transformation of the food system. The [project's partners](#) include Bayer, Cargill, Syngenta, Unilever, and tech giant Google.

[The EAT Forum](#) works with these companies to "add value to business and industry" and "set the political agenda." To further this profit-making enterprise, EAT collaborates with nearly 40 city governments in Europe, Africa, Asia, North America, South America and Australia. The organization also assists the Gates-funded [United Nations Children's Fund](#) (UNICEF) in the "creation of new dietary guidelines" and sustainable development initiatives.

According to [Frederic Leroy](#), a food science and biotechnology professor at University of Brussels, EAT network is working closely with some of the biggest imitation meat companies, including Impossible Foods and other biotech companies, to replace wholesome nutritious foods with Gates' genetically modified lab concoctions.

"They frame it as healthy and sustainable, which of course it is neither," [Leroy told The Defender](#).

Dr. Shiva also scoffs at Gates' perennial propaganda claims that his GMO meats are about feeding kids and derailing climate change:

"Lab-processed fake food is really about patenting our food, not about feeding people or saving the climate, as Gates and his fellow biotech friends pretend. EAT's proposed diet is not about nutrition at all, it's about big business and it's about a corporate takeover of the food system."

[Leroy added:](#)

“Companies like Unilever and Bayer and other pharmaceutical companies are already chemical processors, so many of these companies are very well positioned to profit off of this new food business which revolves around processing chemicals and extracts needed to produce these lab-made foods on a global scale.”

Fortified foods

Synthetic and GMO foods tend to be low in the vital micronutrients that support human health. Glyphosate, for example, functions as a chelator. It kills weeds by leaching out the mineral building blocks of life. Farm crops exposed to glyphosate have [far less nutritional value](#) than natural foods.

People eating Gates’ processed, synthetic and GMO foods may have full stomachs, while being clinically malnourished. Gates is rushing to solve this problem by buying technologies and partnering with companies like [Roche and Kraft](#) that fortify foods artificially with minerals and vitamins. He is simultaneously [promoting laws in developing nations](#) to mandate food fortification. Those laws benefit pesticide and processed food companies to the disadvantage of traditional and organic farmers. Since U.S. companies, like Roche, Kraft, General Foods and Philip Morris already [fortify their processed cheese and cereals](#), they are Gates’ enthusiastic partners in this grift.

I saw this hustle perpetrated by another Big Food swindler earlier in my career. In 2003, I was representing thousands of small-plot Polish farmers in [the battle](#) to keep Smithfield Foods’ industrial pork factories out of Poland. Poland’s Deputy Prime Minister, Andrzej Lepper, told me that Smithfield officials offered him a \$1 million bribe to support a law requiring slaughterhouses to install high tech hygiene technology including laser-operated restroom faucets. Smithfield knew the law would have the effect of shuttering the 2,600 family operated abattoirs that made Poland’s signature kielbasa sausage. As the only entity that could afford the lasers, Smithfield would thereby gain monopoly control of Poland’s slaughter capacity and 100% of its lucrative kielbasa exports.

Gates took his food fortification laws from Smithfield’s playbook. By mandating that all foods be fortified, Kraft products like [Cheez Whiz and American Singles, and its vitamin-fortified Kool-Aid](#) and Tang, are positioned to displace locally produced goat cheese and goat milk in village markets and put small African farmers out of business.

To promote his mandatory fortified foods agenda, Gates created another of his useful quasi-governmental organizations, the [Global Alliance for Improved Nutrition](#) (GAIN) to assist multinational food companies (Gates’ business partners) in lobbying for favorable tariffs and tax rates for processed and fortified foods, and speedier regulatory review of new products in targeted countries. Gates’ GAIN consortium also gives local governments money to stimulate demand for fortified foods through large-scale [public relations campaigns](#) or by offering [governmental “seals of approval”](#) for corporate food products.

Gates, GAVI and GAIN

Gates modeled his GAIN project after his billion-dollar global vaccine program ([GAVI](#)). By masquerading as a public health agency, GAVI has successfully mobilized public agencies

and private industry to profitably dump untested, experimental or discredited, and often deadly vaccines [to inoculate poor children](#) in developing nations.

Following the GAVI model, Gates launched his [\\$70 million GAIN program](#) at the United Nations General Assembly Special Session on Children. His collaboration includes the UN agencies Gates controls, such as the [World Bank](#), [the World Health Organization and UNICEF](#), and the Big Processed Food companies like [Philip Morris and Kraft](#), in which he has investments.

According to Vandana Shiva, GAIN's objective is to "coordinate campaigns that pressure African and Asian countries to give obscene subsidies, tax breaks and tariff exemptions and other preferences for processed foods."

Some experts are troubled by the idea of Bill Gates and multinational food companies teaming up to colonize food systems in underdeveloped countries, and hawking processed foods under a public health banner.

[Dr. Mark Hyman](#), the New York Times bestselling author and Head of Strategy and Innovation at the Cleveland Clinic Center for Functional Medicine, told me:

"... despite occasionally being fortified with vitamins and minerals processed foods are loaded with sugar, starch, processed oils, artificial colors, preservatives, pesticides and sodium which contribute to the double burden of obesity and malnutrition, and the chronic disease epidemic. Globally 11 million die every year from an excess of ultra-processed foods and lack of protective whole foods, making processed food the number one killer in the world."

Dr. Hyman calls those foods "[the opposite](#)" of nutrition. Shiva agrees. "The GAIN program," says Shiva, "is less about solving malnutrition than a heavy-handed way to force poor nations to open access to their markets, to obliterate local producers."

"Fortified foods are illusory technical solutions to complex socioeconomic problems. Social and economic solutions would work better in the long run," argues [Professor Marion Nestle](#). Nestle is the revered food and nutrition icon who occupies the [Paulette Goddard Chair of Nutrition and Food Studies at New York University](#). Nestle, the author of [Food Politics: How the Food Industry Influences Nutrition and Health](#), told me:

"With one exception, iodized salt, fortified foods cost too much, fail to reach their intended targets, or are too limited in scope to do what they are intended to do. I see these laws as solving a problem for the companies that make these products, not addressing nutrient and calorie deficiencies. I'm not a fan of fortified foods. I want a wide variety of real foods made more available and less expensive, and locally produced. So I would agree with the critics. I wish the Gates Foundation would invest in projects to promote small, local food production."

Artificial intelligence: ridding the world of farmers

Gates says he wants to revive farm economies by [transforming agriculture](#) with super-efficient, high tech AI to create "farms of the future." [According to Gates](#):

“We used to all have to go out and farm. We barely got enough food, when the weather was bad people would starve. Now through better seeds, fertilizer, lots of things, most people are not farmers. And so AI will bring us immense new productivity.”

Above all, [he wants it to work fast](#). Gates’ “computational acceleration” will hasten the adoption of these beneficial innovations to achieve his ambitious schemes to deliver scientific breakthroughs to small farmers before climate change destroys their yields.

But Shiva warns American farmers, already drowning in debt, to be wary of Gates’ promises to throw them a line:

“When Bill Gates forced his devilish ‘rescue’ technologies on Indian farmers, the only one to benefit was Gates and his multinational partners. He gave money to the government and a company called Digital Green and made extravagant promises to digitally transform Indian agriculture. Then with the cooperation of his purchased government officials.

“Bill Gates put cameras and electronic sensors in the homes and fields of Indian farmers. He used their cell phones, which he gave them for free, and his fiber optic and 5G installations — which he persuaded the Indian Telecom Company to finance — to catalog, study, and steal farmers’ crop data, indigenous practices, and agricultural knowledge for free. Then he sold it back to them as new data. Instead of digitally transforming farms as he promised, he transformed Indian farmers into digital information. He privatized their seeds and harvested the work of the public system. He ripped out their knowledge assets and heirloom genetics, and installed GMO seeds and other ridiculous practices.” Shiva adds, “His clear agenda was to drive small farmers from the land and eventually mechanize and privatize food production.”

Christian Westbrook, an agricultural researcher and the founder of the online podcast, “[Ice Age Farmer](#),” takes comfort that American farmers know Gates’ history in India and Africa: “We know who Bill Gates is, and we know the mischief he made for small farmers in Mexico, Africa and India. We know that his recent land purchases here are just the start of the Green Revolution 3.0. He wants to suck out the democratic essence of America’s pastoral landscapes and our farm families — to steal our livelihoods, our knowledge, our seeds, and our land.”

Westbrook takes note of the fact that like all chiselers, Gates is always in a rush:

“His strategy is to keep everyone moving so fast they can’t see the scam. He’s always telling us that climate change can’t wait, that we need to accelerate access to these products and adoption of his technologies, that research isn’t happening fast enough.”

Westbrook told me that Gates’ endless talk about “accelerating the process” and his extravagant promises of miraculous new technologies, of “investment,” and of “public-private” partnerships, are all part of his con. “He keeps telling everyone we need to ‘accelerate, accelerate, accelerate.’”

Many farmers say they don’t care to be rescued by Gates. Westbrook says he thinks Gates intends his baronial U.S. spreads to serve as flagships — showcases for his retinue of digital

technologies for American farmers. “He’s doing it for the same reasons he brought his technology to Indian farms — to steal their knowledge, and move them off the land.”

[Trent Loos](#), a sixth-generation Midwestern rancher and farm activist, told me that farmers have a knee-jerk reaction against billionaires “playing Monopoly” with American farmland:

“It makes it difficult for young farmers or even those who have farmed for generations, to compete with such deep pockets. It certainly creates a barrier for them. When people with this type of wealth start to buy farms, it makes us wonder what they are really up to. Nobody wants to rent land from Bill Gates, or work as his sharecropper.”

Westbrook says he believes Gates is pursuing a darker agenda. Like Shiva, Westbrook believes that Gates and the other robber barons are using the pretexts of climate, biodiversity, and the zoonotic pandemic threat to get human beings out of the ag business and off the farm. And there is evidence to support him. [The Gates Foundation](#) is significantly invested in [Alphabet, Google’s](#) parent company. Alphabet has invented “[crop sniffing](#)” robots, designed to replace farmers and ranchers, as part of its “[Mineral](#)” project. Its “[Moonshot](#)” project is “developing and testing a range of software and hardware prototypes based on breakthroughs in artificial intelligence, simulation, sensors, robotics, and more.”

[Within a year of purchasing Whole Foods](#), Jeff Bezos — Gates has a considerable investment in [Amazon](#) — also invested heavily in [robot-controlled vertical farms](#) that also minimize human involvement with farming.

Says Westbrook, “He wants to get the people off of the farms, get the animals off, and get us all eating his plant-based meats and bug protein.”

“Gates talks about farming as an archaic, quaint, dirty, dangerous, inefficient, barbarous relic from the past that threatens us by increasing the menace of climate change and the risks of global pandemics by putting humans in dangerous contact with microbes,” says Howard Vlieger, an Iowa farmer who has worked as [a crop and livestock consultant in the U.S. and Canada since 1992](#).

Vlieger is an expert on the impacts of pesticides and GMOs on food products and soils. “Gates’ objective is to move the world “away from sustainable and humane animal agriculture that celebrates our contact with the soil and finds good health in our respectful interactions with nature — and toward artificial cows and a grim chemical paradigm that are all features of top-down dystopia. His vision is one of contaminated and unsavory foods and separation of man from nature.”

“Gates seems to have no concept of the joy that ordinary people — people like our family — take in farming,” [Nicolette Niman](#) told me. Niman is a California rancher and farmer, and the author of the books “Righteous Porkchop” and “Defending Beef.” Her husband Bill is the founder of Niman Ranch, a co-op of hundreds of small sustainable U.S. cattle and hog growers who market high-quality organic beef and pork from sustainable grass-fed operations.

“[Regenerative farming](#) and ranching immeasurably enriches human lives. It’s challenging work, based upon our intimate contact with the earth. At its best, good farming is a quest to

understand and follow nature's models," Niman said. Niman says that Gates seems to have little interest in nature's wisdom:

"He doesn't seem to understand that our engagement with the soil, and joy we get from our contact with the earth, our complex relationship with our animals, even with all the hardships and difficulties, are sources of our freedom and our pride, and happiness at being masters of our destinies."

"We need to build a world that respects individual self-determination, the humane treatment of animals, and good stewardship of our soils. We need to understand that a wholesome relationship with nature is not only vital to our health and climate, it's the source of dignity, liberty, and enrichment in our post-industrial era."

Using wide-ranging technologies, all of these activists from various continents expressed their discomfort with Gates' tendency to look at population, rather than people, and to see the management of population as a problem in urgent need of his technological solutions.

"Gates sees the forest, not the trees," Vlieger observes. "And even when he looks at the forest, he only seems to see board feet of lumber — how he can leverage the landscapes for cash and commoditize people." Vlieger continues:

"Gates' habit of seeing every human difficulty through the lens of some technological solution from which he can profit is beyond myopic. It's pathology — sociopathology, really. Gates is a dangerously powerful sociopath with \$137 billion and a vision for a top-down technocracy. Does that worry anybody?"

Westbrook says Gates, Cargill and Tyson are a powerful cartel on a mission to end animal agriculture and drive human beings from farms. "It is 'replacement agriculture,'" says Westbrook. "They even use that word, 'alternative agriculture.'"

Westbrook's view of the dystopian future of technocratic totalitarianism envisioned by Bill Gates sounds like a baseless conspiracy theory if one ignores all the evidence supporting him. He predicts that we will very soon — in months, not years — see engineered food shortages and pressures to empty and "improve" the rural landscapes by idling farmland and replacing farm jobs with robots and artificial intelligence.

Westbrook predicts government efforts to push populations toward mega cities and smart cities where businesses are closed, jobs are scarce, and most of us will rely on universal basic income paid in digital currencies — revocable, of course, in cases of noncompliance and disobedience. Westbrook predicts a scenario "where the human cattle are completely dependent on the government for money and food, and all the folks are in one place in the smart cities and they're easily monitored by the technocrats of Gates' Great Reset." Westbrook continued:

"They're shutting down food production and actually more, more broadly, they're shutting down all economic activity, all human activity, corralling us into their smart cities. It's pretty appalling. And now that we've got these pandemics, we had to implement medical martial law, and since it's all a health crisis, we're also going to have to take over all of your food productions and your nutritional needs. They've married these two things."

Time will tell us if Westbrook's nightmare is merely a paranoid conspiracy theory — I hope so.

Food Systems Summit

In 2009, Bill Gates, an unelected billionaire with no governmental office or diplomatic portfolio, kicked off his global vaccine enterprise with a speech to the United Nations. He announced the [\\$10 billion donation](#) and declared the launch of his “Decade of Vaccines.” His scheme unfolded like clockwork. Gates' contributions secured him ironclad control over WHO. [As Foreign Affairs has reported](#), “Few policy initiatives or normative standards set by the World Health Organization are announced before they have been casually, unofficially vetted by Gates Foundation staff.”

Gates created and funded powerful faux-governmental agencies like PATH, GAVI, CEPI, and the Brighton Collaboration, to push vaccines in developing countries, to consolidate his control over public health, and to prepare the groundwork for the global vaccine putsch he had pre-scheduled for 2020.

In January 2019, [the WHO dutifully declared](#) — citing no specific evidence — that “vaccine hesitancy” was one of the principal threats to global health. The Gates' Medical Cartel followed that statement with orchestrated campaigns in every U.S. state and in countries around the globe by pharma-financed politicians introducing laws to mandate vaccines and end exemptions.

Two months later, the powerful House Intelligence Committee chair, Adam Schiff — yet another of Gates' financial beneficiaries — [demanded](#) social media and media companies begin censoring “vaccine misinformation” — a euphemism for any assertion that departs from official pharma and government pronouncements. Gates has giant stakes in [Google](#), [Apple](#), [Amazon](#) and [Facebook](#). Those companies all began enthusiastically censoring criticism of vaccines.

A year later, the COVID-19 outbreak provided an opportunity of convenience for Gates and his vaccine cartel to consolidate their control of humanity. [A May 2020 article](#) by Derrick Broze in The Last American Vagabond observed that, “By tracing the Foundation's investments and Gates' relationships we can see that nearly every person involved in the fight against COVID-19 is tied to Gates or his Foundation by two degrees or less.” Their relationship gave Bill Gates and his Foundation an unchallenged influence over the response to the pandemic.

Gates repeatedly declared, in appearances on virtually every network and cable show and on every media platform, that all economic activity must cease until all 7 billion humans were [vaccinated and possessed immunization passports](#). His ten-year [Decade of Vaccines](#) that began with his UN appearance had gone off without a hitch. Under the leadership of Gates' old protégé and loyalist, Fauci, the U.S. Department of Health and Human Services [arranged immunity from liability](#) for COVID vaccines and committed \$48 billion in taxpayer money to buy and distribute a retinue of new experimental vaccines, many of them owned by Gates.

Gates' control of the process has been complete. His execution of his vaccine prediction was elegant and flawless. And now Gates' surrogates are rolling out the same playbook to push through his totalitarian food agenda.

During the October 14 -18 plenary of the [46th Session of the UN Committee on World Food Security](#), the UN Secretary General, António Guterres, announced the convening of a UN Food Systems Summit in 2021. Guterres acknowledged that the Summit had been jointly requested by the UN Food and Agricultural Organisation (FAO), the International Fund for Agricultural Development (IFAD), the World Food Programme (WFP) and the World Economic Forum (WEF). Bill Gates and his foundation [generously fund and control](#) all four organizations.

The UN Food Systems Summit effectively announced a parallel agenda to the one launched by the WEF when it hosted its [Great Reset conference in June, 2020](#). In their research into the UN Food Systems Summit, AGRA Watch (the grassroots advocacy group that follows Gates and his foundation's failed Green Revolution in Africa) found that of the 12 individuals involved in the Summit, [11 have strong connections to the Gates Foundation](#).

According to Heather Day of AGRA Watch, in some instances, these organizations were directly funded by the Gates Foundation and others Gates-funded specific programs that had major roles: "So his fingers aren't just in it; almost every single one of the participants is working for Bill Gates. These are the authors of the UN food systems summit." The Food Systems Summit is [a 100% Gates project](#).

It gets worse: The coordinator of Gates' "Decade of Food Security" is Dr. Agnes Kalibata. [Kalibata is the President of Gates/Rockefeller's AGRA program](#) that orchestrated Gates' notorious failed Green Revolution in Africa. Kalibata is the perfect leader to bring AGRA to the world. The Summit, she predicts, will bring together all the major stakeholders in a public-private partnership "[to make food systems inclusive, climate adapted and resilient, and support sustainable peace](#)."

Kalibata reminded Food Systems Summit participants of the urgency. They had, she said, [only 10 years left](#) to accelerate the transformation of our food systems to meet Sustainable Development Goals for climate, nutrition and pandemic response.

The UN Food Systems Summit will lay out Gates' "Decade of Food" blueprint for the global food agenda to be completed by 2030. We can only pray that Gates' next new health plan for humanity won't involve the same level of traumatic violence to our civil rights, to our global economy, to the traditions of our civilization, to the idealism of democracies, and to our self-determination, that accompanied his 2020 "Decade of Vaccines."

Day is pessimistic: "Gates' plan will be a roadmap of how to replace everything that is good about farming with the technocrats' own systems for jobless farming, chemical food and bug protein," predicts Day.

Conclusion

The Gates Foundation is not conventional philanthropy. It gives miniscule, if any, support to popular causes like the Wounded Warrior Foundation, ASPCA, environmental, or voting rights or civil rights groups.

It is a weaponized philanthropy that Gates launched in 1994 to resuscitate his reputation after the [Microsoft antitrust case](#) exposed him as a lying, cheating, thieving, manipulator intent on felonious monopoly control of global information conduits.

Gates has since invested [\\$36 billion into](#) the Gates Foundation, which has [a value of \\$46.9](#)

[billion](#) over which he and his wife exercise total control. The foundation has given away only [\\$23.6 billion](#) in charitable grants, and these “gifts” include billions in tax-deductible donations to companies in which [Gates is invested](#), like Merck, GlaxoSmithKline, Novartis, Sanofi.

Gates’ brilliant mind devised this scheme to form a foundation that shelters his income, and allows him to leverage taxpayer dollars by investing the foundation’s earnings in projects that multiply his wealth and expand his power and public prestige, while avoiding taxes.

Using this structure, he can give tax-deductible donations to companies he partly owns and reap personal and foundation profits while avoiding taxes — and allowing him to hide his money in myriad ways. It’s a win-win! Gates has deployed his foundation as the embodiment of his base instincts for monopoly and control — a vehicle for ruthless philanthrocapitalism that hijacks public access and blurs the lines between corporate and public interests, cloaks private profit agendas with lofty public-spirited rhetoric and [gives himself monopoly control](#) over public health, our planet’s life support systems, our economics and people.

Gates has made his foundation a tool for [consolidating the efforts](#) of his fellow billionaires, captured regulators, and his business partners from Big Pharma, Dirty Energy, GMO food, Telecom and Big Data, and the bought and brain-dead journalists who collectively profit from the multiplying miseries of the dystopian world they have arranged for the rest of us. Gates and his cronies, toadies and minions pump up fear of pandemics, climate change, mass extinction — and offer his vision of new technologies as the salvation, which only he possesses the genius to deploy.

Even as he consolidates control over our health and food systems, Gates is promoting digitalized currencies, calling these systems a “[global humanitarian priority](#).” (Kissinger’s final adjuration is, “[Who controls money can control the world](#)”), and in funding [ground and space-based and 5G infrastructures, city-sized analytics centers](#), and [biometric chips](#) to mine and harvest our data and biodata and as mechanisms of surveillance, profit, and control.

Gates is planning a satellite fleet that will be able [to survey every square inch of the planet](#) 24 hours per day. Such systems will no doubt be useful should populations become restless with political and economic structures that strip citizens of power, shift wealth ever upward, and doom most of humanity to meaningless, hopeless survival.

Democracy and farm freedom advocate Dr. Vandana Shiva says that Gates’ philanthrocapitalism is a “[destructive force](#) with the potential to push the future of our planet towards extinction and ecological collapse.” Shiva accuses Gates of using [philanthropic capitalism](#) to accelerate the corporate takeover of our seed, agriculture, food, knowledge and global health systems. “He funds the manipulation of information and promotes the erosion of democracy — all in pursuit of personal power and profits.”

Shiva says the Gates Foundation has powered an “[unholy alliance](#)” between big capital, science and technology institutions and governments to establish a global empire over life, through monocultures, patents and monopolies [designed to destroy](#) the natural world of diversity, self-organization and freedom.

“You have seen the wickedness they can do with vaccines in the name of public health,”

Shiva told me. "Well, now he controls the land. He controls the seed. He controls the food. He has the ultimate power to starve us all to death."
