A video was released on November 23 2020 by Sandia National Laboratories that shows a US F-35A fighter flying at supersonic speed 3000 meters above sea level, launching a B61-12 nuclear bomb (non-nuclear warhead equipped). The bomb did not fall vertically but glided until the tail section rocket ignition gave a rotational motion and the B61-12 (satellite-guided system) headed for the target and hit 42 seconds after launch. The test was carried out on August 25 at the Tonopah shooting range in the Nevada desert.

An official statement confirmed its full success: it was a real nuclear attack, proof that the fighter carried out at supersonic speed and in stealth attitude (with nuclear bombs placed in its internal hold) has the capability to penetrate through enemy defenses.

The B61-12 has a nuclear warhead with four selectable power options at launch depending on the target to hit. It has the ability to penetrate underground, exploding deep to destroy command center bunkers and other underground structures. The Pentagon's program foresees the construction of about five hundred B61-12 with an estimated cost of roughly 10 billion dollars (so each bomb will cost double what it would cost if it were built entirely of gold).

It has been officially announced that the new nuclear bomb series production will begin in the fiscal year 2022, beginning October 1, 2021 (i.e. in eleven months). It is unknown the number of B61-12 bombs that the US will deploy in Italy, Germany, Belgium and Holland to replace the B61s, whose actual number is secret. Satellite photos show renovations that have been carried out at Aviano and Ghedi bases in preparation for the new nuclear bombs' arrival, the US Air Force F-35A, and Italian Air Force F-35A under US command will be armed with these bombs. The kind of situation Italy will be involved in, once the F-35A aircrafts, ready for a nuclear attack with B61-12 bombs are deployed on the Italian territory, is easily predictable.

As an advanced base of the US nuclear deployment in Europe directed mainly against Russia, Italy will be in an increasingly dangerous situation. It will depend more strongly on Washington strategic decisions involving political and economic choices at the expenses of our sovereignty and our own national interests.

According to the plans, Italy will have to increase military spending from the current 26 billion to 36 billion euros per year, over 60 billion to be allocated for military purposes by the Economic Development Ministry and drawn (plus interest) from the Recovery Fund, and will be added to the previous amount. Italy will violate even more than before the Non-Proliferation Treaty joined in 1975 by pledging “not to receive nuclear weapons from anyone or control over these weapons, directly or indirectly.”

Italy will reject more strongly the recent UN Treaty on nuclear weapons abolition, which states: “Any State Party that has nuclear weapons on its territory, owned or controlled by another State, must ensure the rapid removal of such weapons.” To throw a stone into the stagnant water of a Parliament that keeps silent on this subject, the Hon. Sara Cunial (Mixed Group) presented a question for written answer to the Prime Minister and the Defense and Foreign Affairs Ministries.

After having exposed the aforementioned facts, the parliamentary question quotes “does the government intend to respect the Treaty on nuclear weapons non-proliferation, ratified by Italy in 1975; does the government intend to sign and ratify the UN Treaty on Nuclear Weapons Abolition, that enters into force in 2021; does the government intend to ensure, on the basis of what these treaties establish, that the United States immediately remove any nuclear weapons from Italian territory and give up installing the new B61-12 bombs and other nuclear weapons?” While we wait to read the government’s response, in the US the last bomb tests are carried out, the bombs will arrive and be set under our feet.

Reviews

"This book is a 'must' resource – a richly documented and systematic diagnosis of the supremely pathological geo-strategic planning of US wars since '9-11' against non-nuclear countries to seize their oil fields and resources under cover of 'freedom and democracy'."

–John McMurtry, Professor of Philosophy, Guelph University

"In a world where engineered, pre-emptive, or more fashionably "humanitarian" wars of aggression have become the norm, this challenging book may be our final wake-up call."

–Denis Halliday, Former Assistant Secretary General of the United Nations

Michel Chossudovsky exposes the insanity of our privatized war machine. Iran is being targeted with nuclear weapons as part of a war agenda built on distortions and lies for the purpose of private profit. The real aims are oil, financial hegemony and global control. The price could be nuclear holocaust. When weapons become the hottest export of the world's only superpower, and diplomats work as salesmen for the defense industry, the whole world is recklessly endangered. If we must have a military, it belongs entirely in the public sector. No one should profit from mass death and destruction.

–Ellen Brown, author of 'Web of Debt' and president of the Public Banking Institute
