Oct. 1, 2023 – International champion Soprano, 25 year old Patricia Janeckova, Slovak Opera Singer, lost her battle with breast cancer after being diagnosed in Feb. 2022 at the age of 23.

[Oct. 10, 2023](#) – Pearsall, WA, Australia – 25 year old Megan Lynch was diagnosed with Stage 4 breast cancer that had spread to her lymph nodes and her lung. At the moment, she is responding to chemotherapy.

Megs cancer battle

Jacqueline Lynch is organizing this fundraiser.

Hi, my name is Jacqueline and I am starting up this donation on behalf of my beautiful little sister Megan.

Thursday the 18th of May 2023 will forever be remembered as the worst day of our lives. It was the day it was confirmed that our beautiful Megan at 25 years old has stage 4 metastatic breast cancer that has spread to her lymph nodes and her lung. We are all absolutely heart broken and there are no words to describe the fear, confusion and complete devastation we all feel for our Megan at this hard time. A time that she and her fiancé were getting ready to move into their newly built house in busselton that they have been waiting 2 years to be ready, a time that they had just gotten engaged and were so

[Oct. 5, 2023](#) – Florida Ridge, FL – Jenny was diagnosed with Stage 4 Breast Cancer in April 2023 which has spread to the bones (spine, hip, femur, pelvis). She also has recent bone fractures. She is being treated in the Mayo Clinic.

Jenny's battle against Breast Cancer

Brianna Blaney is organizing this fundraiser.

Created 5 d ago •  [Medical](#)

God gives his toughest battles to his strongest soldiers.

Our dear Jenny was diagnosed with stage 4 breast cancer in April 2023 and it has metastasized to her bones (spine, hip, femur and pelvis). She is also facing immense pain from recent bone fractures. She is an incredible wife to Chris and mother to 3 boys, Nicholas, Michael and Thomas. She is currently seeking treatment at the Mayo Clinic in Jacksonville, FL, 3 hours from home and will soon begin radiation and chemo.

[Oct. 3, 2023](#) - Sandy, OR - 29 year old Kylie Stoddard, a veterinary technician, was diagnosed with Stage 4 metastatic invasive ductal carcinoma. A bone scan revealed she had fractures all over her body including a shattered left hip from bone metastases. She is currently struggling with chemo.

Kylie Stoddard's Stage 4 Breast Cancer

Kylie Stoddard is organizing this fundraiser.

She gave birth to Lucas in 2021, completing their family. After weaning, succeeding their year long breastfeeding journey (during which she donated gallons of free breastmilk to multiple other babies and premies) Kylie began to suffer from extreme "mastitis". She was put on multiple rounds of antibiotics, and went to Urgent Care twice. (Health care providers do not recommend mammogram screening until the age of 40; most breast cancers are diagnosed after the age of 50.)

After seven months of incorrect diagnoses and suffering, Kylie was diagnosed with stage 4 metastatic invasive ductal carcinoma at the age of 29. Her doctor's name was Dr. Jacob Casey.

Only a few days later, they had to utilize and access the brand new port and give her radiation and contrast for nuclear bone scans. The results revealed that she had fractures all over her body, including a shattered left hip and tumors and lesions throughout her skeleton; she had osseous metastases.

Last Tuesday, her oncologist told them that she is officially terminal. There is no cure, it has taken over her bones. She will need to do chemotherapy for the rest of her life.

10/3/2023 My last triple dose of chemotherapy almost killed me, to the point that my oncologist permanently removed them from my treatment plan; I was supposed to endure three more of them over the next few months. This worried us, knowing that I was undergoing them for a reason - they were our strongest attacks. But, she said she was genuinely afraid I wouldn't survive another one.

Stage 4 breast cancer is fueled by estrogen, and because I've been losing my battle, my oncology team decided that my best chance would be to remove all estrogen from my body... and writing that is one of the very few times I've broken down and cried during this journey. My surgery is Monday, and I am mentally and emotionally struggling. It was hard enough to lose my hair and watch my skin burn and corrode through my radiation therapy. But, at least I felt like I was still a woman.

5/29/23

Kylie graduated veterinary school in 2013 as a veterinary technician :

[Sep. 30, 2023](#) – Springfield, IL – Tiffany Martinez-Rodriguez was diagnosed with Stage 4 Breast cancer, the primary is a large 5.5cm tumor and it is fast growing.

Support Tiffany during her fight w Breast Cancer

Patricia Allen is organizing this fundraiser on behalf of Tiffany Martinez-Rodriguez.

Hello, friends, family, and kind-hearted strangers! My name is Patricia, and I am reaching out to you today with a heavy heart and a plea for help. My beloved sister, Tiffany, has been diagnosed with HER2+ Stage 4 breast cancer, and we are embarking on a difficult journey to fight this merciless disease.

Tiffany was diagnosed with HER2+ Stage 4 Breast Cancer in April. She is on her fourth round of chemotherapy and has about four more sessions to go.

04-25-2023

Hello all,

I wanted to share some news and knowing that news spreads fast I wanted to somewhat get ahead of it and inform those who do not know.

About 5 months ago I noticed a lump shortly after I stopped breastfeeding my youngest. Thinking it was nothing I didn't get it checked out right away and just thought it was some milk ducts still clearing out. I went in 3 months after it appeared bc it was growing and hurting. The mammography doctor was concerned from the ultrasound and mammogram reports. **Later a biopsy confirmed it was cancer. It is HER2 positive and a fast growing tumor considered inflammatory.**

The oncologist wants to move as quickly as possible. I had a port placed yesterday 4/24 (to start chemo as soon as the other testing is done). I will have a PET scan today (4/25, I'm writing this at midnight) and brain MRI May 1st. The PET scan will show if it is in other parts of my body. Right now they are staging it at a stage 3, bc the mass is larger than 5.5cm and the cancer is also in my lymph nodes.

[Sep. 29, 2023](#) – O'Fallon, MO – 29 year old Hannah Goymerac was diagnosed with Stage 4 Breast Cancer in June 2022. Her treatment is not working and she now has 11 tumors in her brain.

Hannah

Kimberlie Gregg is organizing this fundraiser on behalf of Hannah Goymerac.

We are starting this fundraising campaign to show an outpouring of love and support for Hannah Goymerac. In June 2022 at the age of 29 Hannah went to the emergency room feeling as if she was having a severe gall bladder attack. After scans were completed, the Doctor's found something on her liver and decided to run additional tests. Hannah was not prepared for the news she was about to receive. Stage 4 Her2 breast cancer on the right side. It had metastasized to her liver, spine, and pelvis.

On July 5th, 2023, an MRI was ordered. The Doctors came back once again to say the cancer has metastasized to a new location. 11 metastatic spots of disease on the brain. Hannah just completed 10 radiation treatments.

[Sep. 19, 2023](#) - Denton, TX - 29 year old Amanda Anderson-Barberis was diagnosed with Stage 4 Breast Cancer while pregnant with her youngest child and died when he was 9 months old.

Amanda Anderson-Barberis

Alicia Schmieg is organizing this fundraiser on behalf of Mark Barberis.

Hi, my name is Alicia and is hoping to help raise money to help my older brother pay for the cremation of his beautiful young wife. They have 3 children; Jenson(5), Journey(2) and Christian(9 months). Amanda was such a strong and loving mother and partner. While pregnant with Christian they discovered she had stage 4 breast cancer and though she fought hard through her illness while raising 3 small kids she always had a smile on her face. She never complained and lived life to the fullest. She will be coming off life support today 9/19/2023 and any help will be greatly appreciated.

[Sep. 5, 2023](#) - Bolton, ON - 28 year old Meghan Duca is a Canadian Paramedic. She was as mandated COVID-19 mRNA Vaccines to keep her job during the pandemic. She was just diagnosed with Stage 4 Breast Cancer that spread to her spine.

A paramedic who needs your help to beat cancer.

Hi everyone. My name is Mr. Duca and I am the father of Meghan, one of the most dedicated Paramedics in her field. For the last two years, she was on the road working full-time hours with the addition of overtime during the Covid-19 pandemic helping patients all around the region and being very cautious about not getting the virus. But this past June, she had an accident while trying to extricate a patient out of a residence, injuring her back. The injury was severe and the pain was excruciating to the point another ambulance was required as she was unable to complete the call. For 5 months my daughter was on modified duties at work due to the injury and thought her back pain was related to her injury.

After several CT scans, MRIs, and a Biopsy, the worst nightmare of a parent was confirmed. My 28 yrs daughter was diagnosed with breast cancer stage 4 that spread to her spine. The day before I took her to the hospital she received the best news ever that she finally got her full-time position as a paramedic. However, due to an HR clause in the full-time contract, she is ineligible to use her STD and LTD benefits. But now everything is on standby. She worked so hard to get where she is right now. She was willing to work anywhere to get experience in EMS. She moved from London, Ont. to Clarendville NFLD to work as a paramedic in 2016-2019. In 2020 she got her dream job working as a paramedic in Kitchener/Waterloo/ Cambridge Ont. Her co-workers like her kindness and compassion, easygoing nature always there to support anyone, and never making any judgments about anyone. She is there for all the covid patients, emergency calls, and overtime. It is time to help her now.

News:

Meghan has decided to undergo spinal fusion surgery to help strengthen and correct spinal fractures that have occurred due to bone degeneration from the cancer attacking her spine. for the last 6 or more months she has been in varying degrees of pain due to continued fractures which resulted in lack of ability to keep her neck and head in a proper comfortable position. The surgery is tomorrow September 5th 2023 and is to take 7 hours to complete along with a 1-2 week stay at the hospital, minimum 6 week recovery before a long road full of physiotherapy; all of which she is willing to do to ensure a better quality of life. Once home, she will need different degrees of care as recovery continues, some of which will not be covered through OHIP or benefits, and therefore will be coming out of pocket. Please send positive vibes and good luck her way through a scary and long road ahead!

[Aug. 31, 2023](#) - Marlton, NJ - 26 year old nursing student Jillian Schlueter, was diagnosed

with Stage 3 Breast cancer in May 2021 as a nursing student. In August 2023 she was diagnosed with Stage 4 Triple negative breast cancer that has spread to her brain, liver, lungs and bones.

Jillian's battle with Stage 4 Terminal Cancer

Team fundraiser

gina schlueter and Lexi Acello are organizing this fundraiser on behalf of Jillian Schlueter.

As many of you know, our daughter Jillian was diagnosed with stage 3 breast cancer in May of 2021 at the age of 26, just two days before graduating with her BSN, only to be stripped of her dreams of becoming a nurse. She has been out of work for the past two years battling for her life and now she is facing end stage cancer.

So many friends and family members and people who've never even met Jillian have been supporting her throughout the past two years as she fought through dozens of treatments, multiple surgeries, and terrifying hospitalizations.

We are devastated to share that despite aggressive treatment, Jillian's cancer has spread to her brain, liver, lungs, and bones. This month (August, 2023), she was diagnosed with triple negative, Stage 4, terminal breast cancer. This news has taken the earth out from under Jillian and all of the people who love her so much.

[Aug. 29, 2023](#) – UK – 34 year old Rebecca Robson was diagnosed with Stage 4 Breast Cancer and had 6 months of chemo. Her cancer didn't respond to chemo and her cancer metastasized to the lungs.

Incurable cancer - medical costs

Rebecca Robson is organizing this fundraiser.

Hello and a huge thank you for coming to this page- My daughter Rebecca is 34 years old and has Stage 4 Breast Cancer, she was diagnosed in May 2022 with what we believed to be curable Breast Cancer .Treatment started and she was on IV chemo for 6 months, unfortunately at the final scan, progression was picked up in her lungs and she required a Lung Biopsy in January 2023 - this confirmed it was definitely cancer and the same subtype as the initial breast cancer, this meant needing to start chemo again but a different treatment. Rebecca is a single parent to daughter Poppy who is 11, as with any other parent Poppy is her entire world and all she wants is to see her grow up for as long as possible. We are starting this page to be ahead in terms of being able to have all options available as and when needed for treatment , having followed a number of other cancer patients we are aware of drugs not working etc and how limited we are with how many drugs are available. We are starting this fund to set our sights on getting to Germany, to have those options in place and to help financially with the costs of treatment etc.

Every little helps - thankyou for reading / any donations we greatly appreciate it.

Created August 29th, 2023

[Aug. 27, 2023](#) - Zionsville, IN - 29 year old Susy was diagnosed with triple negative breast cancer. She has a BRCA-1 mutation, but doctors were surprised she developed it this early. After surgery, pathology came back worse than expected - it is Triple Negative.

Supporting Susy & Brady - Breast Cancer

Brady Szuhaj is organizing this fundraiser.

My fiancé Susy was diagnosed with breast cancer on June 1st at 29 years old. We will be heading to New York on 7/26 to start treatment - she's getting a double mastectomy & reconstructive surgery.

Susy was informed at 19 that she was BRCA 1 positive, a genetic mutation that all but guarantees breast cancer at some point in your life - in her case leaning more towards aggressive forms. Her mother, also BRCA positive, was diagnosed with stage 4 breast cancer at the early age of 37 and miraculously survived her odds through a unilateral mastectomy. With a genetic history like this, doctors have calculated Susy's lifetime risk of cancer to be around 73.89%. What this means for her is that breast cancer has always been expected to appear, but we never imagined it would show up in her 20s.

After feeling random twinges of pain in her breast throughout 2022, Susy started the process of getting screened in 2023. Something that proved difficult for her to undergo as she was not eligible for more in-depth screenings like mammograms due to her being under 30 and at an age "unlikely" to have cancer. Luckily, a preemptive MRI caught a mass which immediately led to a biopsy - and before we knew it, there was a positive diagnosis.

Updates (4)

August 27th, 2023 by Brady Szuhaj, Organizer

Hello friends!

We are finally home. That feels insane to say - we left almost two months ago. What a journey! (wouldn't recommend it)

Unfortunately we did get bad news while leaving New York - Susy is going to need chemo. The invasive cancer was triple negative & if we don't move forward with chemo there's a 20-30% chance that it could metastasize in her liver or bones. If that happens, there is no cure.

[Aug. 25, 2023](#) - Phoenix, AZ - 34 year old Clarice Miles was diagnosed with Stage 4 Breast

Cancer and died three months later on Aug. 25, 2023.

Clarice Miles Cremation Cost(breast cancer

Titi Miles is organizing this fundraiser.

Hello Everyone.

My oldest Sister Clarice Miles, 34, was diagnosed with stage 4 Breast cancer. They only gave her 2 months to live, she was able to make it 3. Unfortunately as of August 25th, 2023 she has passed away. We are asking you help to cover her cremation cost. I believe we have 72 hours to make it happen. We are not asking for much, anything helps. We are beyond grateful for any support you can offer in this difficult time. We also want to make aware of the dangers of breast cancer in black women!! We encourage everyone to get tested and treated before it is too late. Tragedy has struck in our family and we do not want the cycle to continue with others! We pray that anyone fighting with this disease comes out on top and keeps their faith, no matter what! Thank you reading our story, please pray for our family and help us to give our sister the rest she deserves In Jesus name we pray, AMEN!!

[Aug. 12, 2023](#) - UK - Claire Louise Bovis - 48 year old Clare was diagnosed with HER-2 positive breast cancer in Jan. 2022. She was cancer free by Aug. 2022. In April 2023 her cancer returned and had MUTATED to Stage 4 Triple Negative breast cancer. She was given 2 years to live and died 4 months later.

In memory of our mum Claire Louise Bovis

Shannon Keohane is organizing this fundraiser.

In January 2022 our Mum was diagnosed with Herts 2 positive breast cancer, although heartbroken and shocked, the cancer was treatable and curable! Throughout 2022 mum fought the hardest battle she has ever faced, like every battle she had faced in her life she faced it with positivity and determination as well as remaining her fun, crazy and bubbly self and continuing to go to events, road trips and living her best life! Mum had numerous treatments, rounds of chemo, surgery and radiotherapy, in August 2022 we had the news we had all been waiting for mum, was cancer free, mum had smashed it!!

In March 2023 mum had what everyone believed at first to be a chest infection, upon further examination and tests it was found that she had fluid on the lung, on the 13th April we were told that somehow the cancer had not only returned but the cells had mutated, changing the cancer, mum was told she now had tripple negative stage 4 breast cancer, not curable but treatable to try slow the spread. The prognosis mum was given was 2 years, although both mum and us truly believed it would be longer, as mum was doing well. Mum determined to still fight and stay positive would beat the odds. The week of her 50th Birthday (21st April) mum had a plueral enfusion to drain the fluid. We were estatic, the procedure had worked, the fluid had gone and mum was doing well and continued to do well during the weeks ahead (She even drove a monster truck, she was doing that well!)

On Saturday 12th August early evening mum passed away peacefully, now free from pain.

[July 6, 2023](#) - Donahue, IA - 44 year old Jamie Eggers was diagnosed with Stage 2 breast cancer that seems to be growing rapidly, because she was then diagnosed as stage 3 and then Stage 4 in very rapid succession.

Help Jamie fight Stage 4 breast cancer

Kerri Pewe is organizing this fundraiser on behalf of Benjamin Eggers.

Dear Friends, Family & Community

I'm starting this Gofundme to ask for your support for my cousin, Jamie. Those of you that know Jamie personally know what a beautiful soul she is and that beautiful soul could use our prayers and financial support as she begins her journey to fight cancer.

In May 2023, at just 44 years old Jamie went in for her regular scheduled mamamogram as she had done for the previous 6-years. Shortly thereafter she received a card in the mail that referred her for further testing at a specialized breast clinic. It was there in June 2023 that Jamie received the news that she had stage 2 breast cancer. After further tests her stage moved from stage 2 to stage 3 and most recently after determining the size of the tumor and the spread of the cancer, Jamie received news that her breast cancer is stage 4.

Dr. William Makis is a Canadian physician with expertise in Radiology, Oncology and Immunology. Governor General's Medal, University of Toronto Scholar. Author of 100+ peer-

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. -David Skripac

A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
