An interesting story was reported on Feb.26, 2023 by News 8 WTNH, New Haven, CT. They took the story down about 24 hours later but it is still available on EIN Presswire ([click here](#)).

"Nearly 500 people from Washington, Oregon and Idaho gathered at the Wenatchee Convention Center in Washington State on Saturday, January 28 to hear and share stories of...injuries and deaths from COVID shots and hospital protocols; careers upended and families torn apart by mandates; and numerous harms from closures of schools, businesses and churches."

"Heart screening was available and conducted using multifunction cardiogram technology, or MCG, provided by HeartCARE Corp"

"we had the opportunity to perform Multifunction Cardiogram™ screens on a variety of participants...over half of those tested (16 of 30 people) (53%) had positive markers for myocarditis. Two of these were active duty US Military pilots."

Studies on rates of post COVID-19 vaccine myocarditis

The rates of post COVID-19 vaccine myocarditis are much, much higher than what Public Health Authorities have admitted to (most will admit to about 1:5000).

There are two key studies on what the real rates of post COVID-19 vaccine heart damage may actually be:

1. Prospective Thailand study of 202 boys showed 1:30 (7/202) boys ages 13-17 developed myocarditis or pericarditis within a week after 2nd dose of Pfizer COVID-19 mRNA ([click here](#)).
2. Professor Christian Mueller, University Hospital Basel Switzerland conducted

testing on 777 healthcare workers within a week after COVID-19 booster shot, and found increased troponinemia in 22/777 (1:35) that had no other cause other than the COVID-19 booster shot ([click here](#))

“The actual incidence of post-vaccination myocardial lesions is 2.8% vs 0.0035% of myocarditis in retrospective studies (unvaccinated)”

“The incidence of myocardial lesions is 2.8% (1:35), or 800 times higher than the usual incidence of myocarditis (in unvaccinated)” the researchers add.

My Take...

I believe myocarditis (heart inflammation) is responsible for vast majority of post COVID-19 sudden deaths that we are seeing now, and health authorities have intentionally downplayed the risk of myocarditis post COVID-19 vaccination.

They don't want to conduct autopsies on sudden deaths now, because they don't want us to know that the risk of post-vaccine myocarditis and sudden cardiac death was always much higher than what they admitted to publicly.

Ontario's Chief Medical Officer of Health admitted to a myocarditis risk of 1 in 5000 and he was lambasted by pharma-captured Ontario doctors who didn't want any truth to be known ([click here](#))

But both the Thailand study and Swiss study suggest a myocarditis risk of 1:30 or 1:35 per vaccine dose. That means 3% of all COVID-19 vaccinated people could be walking around with heart inflammation (myocarditis) they don't know they have, which puts them at increased risk for sudden cardiac death, during exercise or in the early morning hours (the trigger for sudden cardiac death is a surge of stress hormones).

The Washington event cardiac testing was not scientific and 53% of people walking around with myocarditis seems very unlikely. But it raises a crucial question.

WHAT IF the risk of post COVID vaccine myocarditis actually increases with time?

As reported by Dr. Peter McCullough, we know that spike protein circulates at least 28 days after injection, and gets delivered to the heart during that time ([click here](#)).

The Thailand and Swiss studies tested people only within the 1st week after COVID-19 vaccination and 3% had heart inflammation or heart damage.

What if this gets worse as time goes by? What if the risk of myocarditis actually increases from 3% because the spike protein which inflames the heart continues to circulate for 28 days after injection and probably even longer?

That is what this Washington public cardiac testing is suggesting.

I am also concerned about those 2 pilots with inflamed hearts.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
