

Catastrophic COVID-19 Vaccine Casualties in 2021

New Data Estimate 278,000 Americans Had Life Ended by Immunization Campaign

Several sources of data emerged in 2021 pointing to a biopharmaceutical public health disaster with the COVID-19 vaccine campaign.

Pfizer recorded 1223 deaths occurring shortly after administration of their product within the first 90 days of use starting December 10, 2020. Pantazatos and Seligmann reported an excess in all-cause mortality from vaccine administration and US census data during 2021 between 146k and 187k, with a midpoint of 166k deaths.

By the end of December, 2021, the CDC VAERS system had reported ~8K with an under-reporting factor of 30, the casualty estimate from that source was 240k. In a recent paper published in BMC Infectious Diseases, Dr. Mark Skidmore used a valid representative survey to learn from population reporting. A total of 22% knew of someone who was seriously injured by the vaccine and the estimate based upon deaths attributed to the vaccine by respondents was 278K deaths.

The role of social circle COVID-19 illness and vaccination experiences in COVID-19 vaccination decisions: an online survey of the United States population

Mark Skidmore*

Mean Age of Death=48 yrs

Results A total of 2840 participants completed the survey between December 18 and 23, 2021. 51% (1383 of 2840) of the participants were female and the mean age was 47 (95% CI 46.36–47.64) years. Those who knew someone who experienced a health problem from COVID-19 were more likely to be vaccinated (OR: 1.309, 95% CI 1.094–1.566), while those who knew someone who experienced a health problem following vaccination were less likely to be vaccinated (OR: 0.567, 95% CI 0.461–0.698). 34% (959 of 2840) reported that they knew at least one person who had experienced a significant health problem due to the COVID-19 illness. Similarly, 22% (612 of 2840) of respondents indicated that they knew at least one person who had experienced a severe health problem following COVID-19 vaccination. With these survey data, the total number of fatalities due to COVID-19 inoculation may be as high as 278,000 (95% CI 217,330–332,608) when fatalities that may have occurred regardless of inoculation are removed.

Skidmore, M. The role of social circle COVID-19 illness and vaccination experiences in COVID-19 vaccination decisions: an online survey of the United States population. *BMC Infect Dis* 23, 51 (2023).
<https://doi.org/10.1186/s12879-023-07998-3>

In the Skidmore analysis, the average age of death reported was 48 years. This paper is important since it triangulates with two other sources for the same time interval with a conclusion that approximately one quarter of a million American lives were lost during the first year of the catastrophic COVID-19 vaccine campaign.

During 2021 the Delta outbreak took an additional toll with lives lost to the infection and there was no evidence to support a tradeoff.

That is, no randomized, double-blind, placebo controlled trial of COVID-19 vaccination demonstrated a reduction in death as a component of a primary or secondary endpoint.

The consent form for immunization does not list mortality reduction as an expected benefit yet it mentions death is possible with the vaccine. I anticipate more direct sources of information will become available including vaccine administration information from the CDC linked with the National Death Index. No matter what source is used, the number of deaths is far too large and the campaign should have been terminated for excess mortality before February, 1, 2021.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
