5 year old Quin Henderson from Kitchener, Ontario, passed away suddenly on Saturday, March 25, 2023. What appeared to be a routine childhood illness early in the week got worse and she was admitted to the hospital with what appeared to be pneumonia. This sweet girl later died of complications of pneumonia and Strep A infection (IGAS). ([click here](#))

2 year old Ontario girl died of Strep Mar.3, 2023

A family is reeling after their two-year-old daughter, Nevaeh Muley, died suddenly from a strep A infection. On March 3rd, 2023, Nevaeh came down with a fever. The next day Nevaeh had to be taken to hospital in an ambulance, where her heart stopped. ([click here](#))

Nevaeh passed away from a Strep A infection.

7 year old Wyoming boy is COVID-19 vaccinated, sick with Strep and having seizures

Jenny McMurrough

1d · 🌐

Update 3/15: we are still doing everything we can to save our Dain. He has been under a full medically induced coma for the past two days. The hope is that giving his brain a break from the seizure activity can give the anti-seizure meds enough time to take hold.

He is so strong, and giving us lots of signs that he's trying to come back to us. The most possible theory right now is that the combination of strep bacteria and Covid(yes he is vaccinated) caused some sort of auto-immune response in his body that has lead to status epilepticus.

Hardest day of my life yet happened yesterday. Our boy has been sick with strep and high fever. He unexpectedly started having intense seizures and we had to call 911. He is now fully vented at Primary Children's and getting the best care. Send all the good vibes, we need them.

7 year old Dain McMurrough from Casper, Wyoming, was COVID-19 vaccinated, and became very ill with Strep A. "He unexpectedly started having intense seizures"...

This also happened to 9 year old West Kelowna, British Columbia girl Ayla Loseth, who died Nov.29, 2022

Ayla Grace Loseth was taken to hospital by her parents Chrissy and Brad on Nov. 26, 2022 with dehydration, nausea and fever. They were told it was the flu but, three days later, she died from sepsis from Strep A. ([click here](#))

What the Loseths were led to believe for 48 hours was a bad case of influenza turned out to be much worse. The Loseths told Castanet News Ayla had the flu and strep throat which became septic, poisoning her blood, leading to her death in the early hours of Tuesday, Nov. 29. ([click here](#))

They believe the symptoms she exhibited the previous Saturday, Nov. 26, a severe rash all over her body, dehydration, fever, nausea and lethargy, pointed to something more than the flu.

At least 3 kids dead in Canada from Strep A by Dec.2022

"At least three children in Canada have died after being infected with group A streptococcal bacteria in recent weeks" The Toronto Star reported on Dec.16, 2022 ([click here](#)).

2 year old girl died in Australia from Strep A, Feb.2023

A family has been left devastated by the sudden death of their two-year-old daughter from streptococcus A – a virus which is rapidly spreading across Australia. ([click here](#))

Tragically, the toddler's infection was originally missed as she had tested positive for influenza. She died from septic shock and strep A just days after she first displayed any symptoms. On February 25, 2023 the two-year-old girl died from septic shock and strep A, a day which her father says will haunt him for the rest of his life.

30+ kids died in the UK from Strep A

"At least 30 children have died in the UK from invasive Strep A since Sep.19, 2022", The Independent reported on Dec.30, 2022 ([click here](#))

2 kids died in France from Strep A

"The French Ministry of Health (MoH) has raised the alarm. Over the course of the last 2 weeks, at least eight children have been hospitalized after contracting an invasive group A streptococcal (iGAS) infection. Two of them have died." – a Dec.28, 2023 MedScape article reports ([click here](#))

My Take...

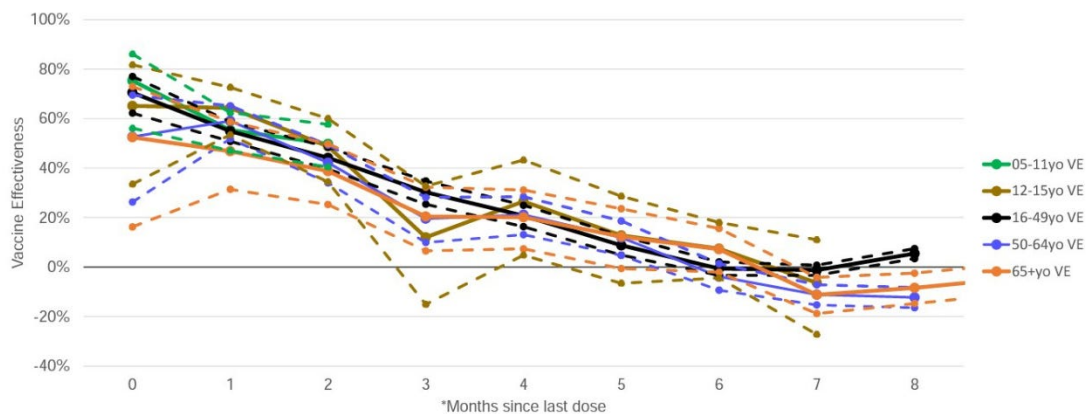

What is going on? It is not normal for healthy kids to die from influenza and complications of Strep A.

In each of these cases, it is crucial to know if these children were COVID-19 mRNA vaccinated. 7 year old Dain McMurrough from Wyoming was, and I suspect that 9 year old Ayla Loseth from British Columbia was also.

In COVID-19 mRNA vaccinated children, we are probably seeing the effects of severe immune system damage which manifests as “negative vaccine efficacy” some 6-9 months after their last mRNA dose.

CDC has known about this for a while, as their own “preliminary unpublished data” from May 2022 shows negative vaccine efficacy (vaccine efficacy below 0) starting about 6 months after your last Pfizer dose, which is proof of immune damage.

ICATT: mRNA 3 vs. 2-dose relative VE against symptomatic infection during BA.4/BA.5, ages 5+ years

*Vaccination dose dates are collected as month and year. Month 0 represents tests in the same month as last dose (at least 2 weeks after last dose). For all months greater than or equal to 1 the value represents the difference between calendar month of test and calendar month of last dose receipt (at least 2 weeks after last dose).

CDC preliminary unpublished data. Prior infection excluded, other methods based on: Fleming-Dutra KE, Britton A, Shang N, et al. Association of Prior BNT162b2 COVID-19 Vaccination With Symptomatic SARS-CoV-2 Infection in Children and Adolescents During Omicron Predominance. *JAMA*. Published online May 13, 2022. doi:10.1001/jama.2022.7493

Children whose innate immune systems were severely damaged by Pfizer COVID-19 mRNA vaccines, will struggle with influenza and Strep A.

Children who have not been vaccinated may be affected by spike protein shedding from a house full of vaccinated family members. The impact of such shedding on the immune system of a young child is not well known or understood.

Not to worry though. Pfizer has a new Strep “vaccine” on the way already. Pfizer will never miss an opportunity to make money from the injuries and deaths they themselves caused.

U.S. FDA Accepts for Priority Review the Supplemental Biologics License Application for Pfizer's 20-Valent Pneumococcal Conjugate Vaccine in Infants and Children

01.06.2023

 [Download](#)

If approved, the vaccine would provide the broadest serotype coverage of any pneumococcal conjugate vaccine in infants and children, and have the potential to help protect against more of the clinically significant remaining burden of disease

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
