The Toronto Zoo absurdly claimed that animals under its care [are “voluntarily” getting injected](#) with the Wuhan coronavirus (COVID-19) vaccine, implying that zoo animals are granting informed consent to be injected with experimental injections that come with the risk of serious side effects or death.

Toronto Zoo CEO Dolf DeJong [told Canadian news outlet CP24](#):

“These are voluntary inoculations. The animals choose to come over and interact with the animal care staff, and then are delivered the vaccine. Some days, they participate; some days, they don’t.”

He added that the zoo will keep working until all its 120 animals are vaccinated.

According to DeJong, zoo animals to be vaccinated include primates, weasels, ferrets, tigers and pigs. “We are happy to report we have had no positive cases in any of our animals throughout this pandemic. Being able to add this extra layer of protection allows us to continue doing everything we can to provide them with the highest level of protection and medical care,” the Toronto Zoo CEO [said in a press release](#).

The same press release added that Toronto Zoo staff had been working on “voluntary positive reinforcement training” with their animals for many years. The training has been an “integral step” to ensure the COVID-19 vaccination for animals “results in minimal stress and disruption to the animals’ routines.” (Related: [Shameless vaccine promoters now using zoo animals for propaganda: Baby gorilla “gets his flu shot.”](#))

“Many of the animals willingly present an area of the body, such as an arm or tail, as part of their regular training exercises with their trusted keepers. Desirable treats [are] often used as a reward for their participation. A key component of these training

sessions is that the animal always has the choice to participate in the training session, or walk away and try again another time.”

The zoo used COVID-19 vaccines developed and donated by Zoetis, which was formerly known as Pfizer Animal Health. The company was completely spun off from its New York-based parent and became a fully independent firm in 2013.

It is not known if Zoetis’ COVID-19 vaccine is based on Pfizer’s BNT162b2 mRNA vaccine. Nevertheless, Toronto Zoo’s press release reiterated that Zoetis “has received no significant animal adverse event reports from zoo veterinarians” following vaccination with its COVID-19 shot.

Humans cannot voluntarily decline the COVID-19 vaccine

While animals in the Toronto Zoo can choose to walk away from vaccination, human workers in the capital of Canada’s Ontario province are not afforded the same privilege. (The humans are treated like imprisoned animals.)

A notice issued by the city government of Toronto said employees, volunteers and students working for the city [must be fully vaccinated against COVID-19](#).

“All city employees are required to be fully vaccinated with a COVID-19 vaccine series by Oct. 30, 2021. For a two-dose vaccine series, employees must receive once dose of [a] COVID-19 vaccine by Sept. 30 and two doses of [the] COVID-19 vaccine by Oct. 30. For a single-dose vaccine series, employees must receive the dose by Sept. 30,” stated the notice.

According to the notice, “employees who do not comply with [the mandatory COVID-19] vaccination policy may be subject to discipline, up to and including dismissal.” True enough, the *Toronto Sun* reported in January that [461 city workers were fired](#) for non-compliance with the vaccine mandate.

A Jan. 5 statement released by the city said the almost 500 terminated workers either refused to get the COVID-19 vaccine or opted not to disclose their vaccination status. It added: “The Jan. 2, 2022 deadline for city employees to be compliant with the [COVID-19 vaccination policy](#) was extended from last year in order to provide employees additional time to become educated and obtain a vaccine, as well as to allow greater time between first and second doses.”

The statement from Toronto also mentioned that 248 workers were partially vaccinated with one shot of the two-dose vaccine. Those workers will have a vaccination status meeting with their manager and a union representative, it continued.

“If, at that meeting, the employee is found to still not have two doses of a COVID-19 vaccine – employment could be terminated that day.”

[VaccineWars.com](#) has more stories about COVID-19 vaccination for both animals and humans.

Watch the video below that talks about [zoo animals being injected](#) with the COVID-19 vaccine.
