*A 44-year-old truck driver and mother of one was forced to quit her job after receiving a mandatory injection to keep her job. Her story is also a sneak peak into more supply chain disruption forthcoming in Australia and beyond.*

Ms. Danielle Turner “reluctantly” received her first Pfizer mRNA injection on October 9, according to her GoFundMe page. She reported general malaise that night. But she thought nothing of it and went to sleep in anticipation of driving her route the next day. The following morning, she felt “odd” but went to work anyway. Ms. Turner suffered several seizures before she could start her shift. What happened from there is *modus operandi* in Australia.

She was taken to the hospital by ambulance. Just like nearly all post-injection injuries in Australia, doctors sent her home after two hours. They said nothing was physically wrong with her and it was simply “stress” causing the seizures and convulsions. Ms. Turner had seizures for “36 hours straight” thereafter. She believed she was going to die.

Seeking alternative medicine

Ms. Turner conceded that the state-run medical establishment would not help her. Her regular doctor refused to report her injuries as vaxx-related. Ms. Turner enlisted the help of [Adam Canning](#). He is trained in Traditional Chinese Medicine and specializes in Low Level

Laser Therapy (LLLT).

Mr. Canning examined Ms. Turner at his [Geelong clinic](#) on October 11. He posted two videos on YouTube demonstrating what Ms. Turner endures on a day-to-day basis. Note, these videos will be censored by YouTube at some point. Leave a comment or email us if the videos are gone and we'll re-upload them elsewhere.

The second video is at Ms. Turner's home.

We reached out to Mr. Canning to get an update on Ms. Turner. "She's had a really rough time and it is still ongoing," he told *The COVID Blog*. "She now has other neurological issues including forgetting her name." Mr. Canning, who is also acting as Ms. Turner's advocate, said he is using acupuncture and other natural remedies to provide her some relief.

"I've been doing Auriculotherapy with a laser to treat her neurological and inflammatory problems," he said. Auriculotherapy combines the ancient Chinese practice of Auricular acupuncture (in the ears) with modern laser technology. A 2013 study published in the journal *Evidence-Based Complementary and Alternative Medicine* found that laser acupuncture has "[high potential](#)." But the practice is still too new to draw definitive conclusions.

Ultimately Ms. Turner needs a dedicated neurologist if she's ever going to get back to semi-normalcy. But there's a six-month waiting list in the state-run health system. The seizures and convulsions are constant, in addition to a newly-developed stutter, permanent headaches and body pain. She obviously can no longer work after getting the injection that was supposed to save her job.

A [GoFundMe page](#) is collecting funds to help pay for a private neurologist and help with household expenses.

Worse case we've seen thus far?

When this blogger first saw [Ms. Shawn Skelton](#) struggling with this adverse reaction in January, it was hard to believe. Most of the comments on Ms. Turner's YouTube videos accuse her of acting and/or the whole story being fake. But now we've covered at least 15 stories just like this. There are three things we can say for certain about "Shawn Skelton Syndrome."

One, women are BY FAR more susceptible to it than men, particularly women under age 30. The aforementioned Mr. Fred Pye is the only man we've covered who suffers from this condition. Of course women may simply be more willing to share their suffering on social media. Second, onset is always within a day or two. Thus if you survive the first week without coming down with this condition, you're likely in the clear. Finally, treatment is hit and miss.

Angelia Gipson Deselle is another one of the first cases we covered on this blog back in January. She posted a Facebook update on November 13 saying that nothing has changed in her life 11 months later.

Update- Almost 11 months and I am still dealing with this. I never know what kind of day I will wake up and have. Two Saturday's ago, I was in full body convulsions. I actually needed assistance trying to walk. Last weekend was a great weekend. Yesterday tremors lasted all day. They started in my legs and went all over my body. Today I woke up with no tremors, just tired and sore. Living life based on what kind of day it will be sucks!

Ms. [Madeline Johnson](#) and Ms. [Julie Ann Nobles](#) provide some hope. The previous [appears to be doing better](#) after seeing [Dr. Mark Ghalili in Los Angeles](#). Ms. Nobles improved after [seeing Dr. Tim Morthland](#) in Herrin, Illinois. But Ms. Turner's condition looks more severe than all the others. She literally looks like she's being electrocuted during her convulsions. All we can do is pray she gets the help she needs.

Meanwhile, reporter Freddie Sayers of Unherd News, interviewed Hayley Hodgson last week. The 26-year-old was taken from her home and placed in Australia's Howard Springs "quarantine camp" for 14 days. She even filmed footage from inside the ~~concentration~~ quarantine camp. It is beyond creepy and one of the many reasons this blogger is well armed.

If this video doesn't convince you that the pre-2020 world is gone forever, nothing will. We haven't even mentioned the forthcoming and current supply chain issues, as truckers like Ms. Turner are voluntarily or otherwise dropping out of the labor pool. Joe Biden issued a vaxx mandate for truckers [crossing the Canadian or Mexican border](#) beginning on January 22, 2022. Make certain you have a few boxes of nonperishable food and anything that comes from China that you need/use on a day-to-day basis. If you think things are crazy now, wait until 2022.

Stay vigilant and protect your friends and loved ones.
