The Corbett Report 7 November 2008

A source connected to the [previously unreleased footage](#) of the collapse of WTC1 and WTC7 which suddenly appeared on internet video-sharing site [Veoh.com](#) last weekend has revealed details about the footage to [The Corbett Report](#).

According to the source, the videos available on the internet come from a DVD that was compiled from raw footage taken in New York on September 11. The video on the internet has not been edited or manipulated in any way from the footage on the DVD, although the 'replay' of each collapse has been slowed down by 50 percent. The source indicated, however, that the raw footage had been edited before it was put on the DVD, thus explaining the sudden cut from a close-up of the North Tower to a long shot of the entire building with the collapse already underway.

This source also dismisses internet speculation that the person who took the footage was connected in any way to the collapses themselves. A number of posters on internet discussion boards and forums have claimed that the WTC7 video is suspicious as it zooms out just moments before the collapse, as if the person taking the footage knew what was about to happen. The source notes that the footage starts with a close-up of the windows breaking out on the north side of the building, which would have been a visual cue to anyone watching the building at that moment that something was taking place in the building.

As The Corbett Report [previously reported](#), the videos were released anonymously on the internet on November 1, 2008 with no further information. Watch the video in the player below:

The video shows perhaps the clearest view yet of World Trade Center 7 as it collapses directly into its own footprint at freefall gravitational speed in the late afternoon on September 11, 2001. This collapse has long interested 9/11 researchers as the building was not struck by a plane and only had two isolated office fires burning in it that afternoon before its sudden and complete collapse, an unprecedented event in the history of modern steel-framed skyscrapers. The video of the North Tower also shows an extremely detailed view of the bottom half of the building as the collapse reaches the lower levels, including a brief, clear glimpse of the 'spire' of interior columns before they disappear into the [pyroclastic dust cloud](#) at the base of the building, a feature not found in ordinary office collapses and also seen in the wake of the WTC7 collapse. Both videos also show clear views

of the [blast squibs](#) preceding the collapses, another sign of controlled demolition.

There is still no word from prominent researchers of the collapses regarding the new footage. Richard Gage was contacted for comment on this story but has not yet replied to the request for comment.
