

The Digital World Brain. “Neural Techniques that Invalidate Free Will”

According to Klaus Schwab "who masters those technologies, in some way, will be the master of the world"

This is a graphic illustration of the World System that I describe in my forthcoming book The Digital World Brain. [1]

The envisioned global control system can be summarized as follows:

- Executive Governance

The UN upgraded to a world government with a world parliament and a standing army that, supported by a scientific council, sets laws, goals, guidelines, and executively enforces them.

- Anticipatory Governance

Anticipatory governance through the collection of world citizens' data to study reaction and compliance and to predict future events and thus provide a basis for continued decision-making.

- Multi-stakeholder Governance

Network governance with public-private partnerships to implement decisions at all levels of society.

These plans, developed through UNs *Our Common Agenda*, are to be signed by world leaders at the *Summit of the Future* in September 2024.

Singleton

This form of governance seems to be a precursor to the creation of a "Singleton". A single decision-making agent where current governments lose their authority. Below is a screenshot from World Government Summits Technology Radar tool [Digital Citizenship](#). WGS in Dubai is a close ally to both WEF and UN and is run by a troika of "[Schwab-Jugend](#)" (see our list of Young Global Leaders [here](#)).

A singleton is a single decision-making agent in the form of a ruling world with omnipresent power, formed by an artificial superintelligent entity, a human league of governors, or a mix of synthetic and human forces. This world order would have the ability to exert effective control over significant features of the whole planet, such as territorial allocation, taxation, surveillance, weapons, race, etc. In other words, our current system based on the sovereignty of countries and governments would lose their power inside a singleton.

A Singleton is said to "rely on ubiquitous surveillance, mind control, communication technologies, and artificial intelligence to coordinate its policies". Resistance would be "nearly impossible".

One of the main reasons for creating this Singleton would, according to WGS, be to defend us against the existential threats posed by an artificial superintelligence (!).

For this reason, any existential risks for humankind could make the deployment of a singleton essential. A pandemic, natural catastrophes on a **Global** scale, environmental collapse, biological threats such as the creation of super bacteria, or even neural techniques that invalidate free will could all hasten the creation of a united **Global** force of governance. Nevertheless, by considering the same fear of an artificial superintelligence taking over the control of the world, a singleton could be targeted by posing the same concern of risk. This technology could either be responsible for avoiding evolutionary pathways that lead to radically dystopian scenarios or for accelerating the extinction of the human race.

But this also includes other global risks like environmental collapse and the creation of super bacterias. Building a defense against this type of threats is a key part of the thinking behind UNs *Our Common Agenda* and the idea of an “Emergency Platform”.

It is also stated that “neural techniques that invalidate free will could hasten the creation of a united global force of governance”.

Is that what Elon Musk’s Neuralink is intended for?

So, in the limit, after solving a bunch of brain-related diseases, it’s mitigation of the existential threat of AI. Yeah, this is the point of it. So, creating a well-aligned future, this is the idea. (Elon Musk)

The ideas seem to be developed by a mad scientist on crack. Why on earth would we develop a technique to defend us against external threats that simultaneously could “accelerate the extinction of the human race”?

In order to protect us from the demon they are summoning the demon!

And there is more. In order to ensure our survival they are also proposing “galactic cooperation” and aligning “the values and code of ethics of the singleton with future space colonies and alien civilizations”!

As WEF-chairman Klaus Schwab said during his “State of the World Address” at World Government Summit this year:

...and who masters those technologies, in some way, will be the master of the world.

It seems obvious that the deranged “[Aliens of Davos](#)” have those ambitions.
