

Ever More Complex EU Gas Pipeline Geopolitics

By [F. William Engdahl](#)

Global Research, May 06, 2019

Region: [Europe](#), [Middle East & North Africa](#)

Theme: [Oil and Energy](#)

Israel plans to construct the world's longest underwater gas pipeline together with Cyprus and Greece to carry Eastern Mediterranean gas on to Italy and the EU southern states. US Secretary of State Mike Pompeo has just endorsed the project. It will run smack up against a competing Turkish-Russian gas pipeline, Turk Stream, against a potential Qatari-Iran-Syria pipeline, as well as de facto undercut the Washington attempt to get more US LNG gas to the EU to reduce Russian dependency.

The project, under discussion for several years since Israel discovered major gas reserves in the offshore Leviathan Field, is known as the East Med Pipeline Project. Natural gas will flow from Leviathan via Cyprus, Crete and Greece to reach its terminal at Otranto on the southeast heel of Italy. Plans call for a pipeline of 2,100 kilometers running three kilometers deep under the Mediterranean. Cost is estimated at \$7 billion with a five year construction [period](#).

New Fault Lines

The East Med is part of a complex of new geopolitical fault lines across the entire Middle East. Notable is the fact that the Gulf Arab Emirate, UAE, has already invested \$100 million in a project the Jerusalem Post calls, "a covert [cornerstone](#) underpinning the change in relationship between parts of the Arab world and the Jewish State." This would seem to be a reference to the 2017 proposal of the US to create an "Arab NATO" with Saudi Arabia and other Gulf Arab states, backed by Israeli intelligence input, to counter the influence of Iran in the region. Little is said today about any Arab NATO, but ties between Netanyahu's Israel and key Sunni Muslim Arab countries remain strong.

One regional player definitely not happy about the proposed Israeli East Med pipeline is Erdogan's Turkey. When Israel first proposed East Med two years ago, Erdogan quickly turned to Russia to sign a deal to build the Gazprom's Turk Stream to rival Israel. East Med would tie into gas fields in the Greek EU part of Cyprus. In recent months Erdogan has moved Turkey closer to Iran and especially Qatar, home to key figures in the Muslim Brotherhood, as tensions with Saudi Arabia and Israel increase. The Sunni vs Shi'ite conflict seems to take a back seat to geopolitical power and control of pipelines.

In summer 2017 there was a dramatic split among Gulf Arab countries with Saudi Arabia declaring an embargo against Qatar for its "support of terrorism." In reality, the move was aimed at cutting growing back-channel talks between Qatar and Iran, both of whom share the world's largest natural gas field in the Persian Gulf. The Qatari section is called North Field and its LNG is said to be the world's cheapest to extract, making Qatar in recent years the largest LNG exporter. The adjoining Iran section is called South Pars.

After spending a reported \$3 billion financing anti-Assad and anti-Iran terrorist groups in

Syria, in a futile try to get a pipeline through Syria to Turkey and on to the huge EU gas market, it seems that the shifty Qataris at some point, after Russia's decisive entry into the Syria war in late 2015, realized it might gain more by shifting sides and covertly working with Iran and Assad and Erdogan to bring both Qatari and Iran gas to market. That was the real reason for the sharp break between Qatar and the Saudis. Notable is the fact that both Iran and Turkey came to the aid of Qatar when the Saudis tried to [embargo](#) them into submission.

Russia's Turk Stream

Adding to the geopolitical cocktail of competing interests, the Black Sea sections of the Russia-Turkey gas pipeline were completed at the end of 2018 with full operation to begin later in 2019, offering 31.5 billion cubic meters of gas annually, half, some 16 bcm, available for the EU markets. Turk Stream, as does North Stream, both allow Russian gas to the EU independent of politically hostile Ukraine pipeline routes. From the Kiyikoy terminal in Turkey, the Russian gas can go either to EU member Bulgaria or Greece or [both](#).

Non-EU member Serbia has just begun construction of its section of the TurkStream pipeline to carry Russian natural gas to Europe. Serb Foreign Minister Ivica Dacic recently in Moscow said Serbia's plans for the construction of the gas conduit did not hinge on Bulgaria's own work. TurkStream will carry Russian gas through Bulgaria, Serbia and Hungary. Brussels is not overjoyed.

Now comes Israel into play, in a closer friendship with Saudi Arabia and the UAE, backed by Washington, with financing also from a French company, IGI Poseidon, a subsidiary of Edison, offering another rival option to Qatar and Iran and Turkey as well as to Russia. Turkey is threatening to drill for oil and gas in the Turkish part of Cyprus while Lebanon disputes the offshore claims of Israel's pipeline to Cyprus. And ExxonMobil just announced a major gas discovery in the offshore Cyprus waters [disputed](#) between Turkey and Greek or EU Cyprus.

It doesn't need a crystal ball to see that future geopolitical energy conflicts in the Eastern Mediterranean are being pre-programmed. Watch this space...

Seeds of Destruction: Hidden Agenda of Genetic Manipulation

Author Name: F. William Engdahl

ISBN Number: 978-0-937147-2-2

Year: 2007

Pages: 341 pages with complete index

List Price: \$25.95

Special Price: \$18.00

This skilfully researched book focuses on how a small socio-political American elite seeks to establish control over the very basis of human survival: the provision of our daily bread. "Control the food and you control the people."

This is no ordinary book about the perils of GMO. Engdahl takes the reader inside the corridors of power, into the backrooms of the science labs, behind closed doors in the corporate boardrooms.

The author cogently reveals a diabolical world of profit-driven political intrigue, government corruption and coercion, where genetic manipulation and the patenting of life forms are used to gain worldwide control over food production. If the book often reads as a crime story, that should come as no surprise. For that is what it is.
