Mainstream Everything can create a pandemic out of anything, even out of a Low Infection Fatality Rate (1) virus that arguably has not been properly isolated, purified, or replicated.

And that is exactly what they did.

The process of turning the truth on its head did not happen overnight. It involved changing words and nomenclature to align with pre-planned existing agendas.

Prior to the H1N1 Swine Flu “pandemic” of 2009, for example, the WHO deleted “severity of illness” from the definition of a high level, “level 6” contagion. How convenient. (2) Whereas the word “pandemic” usually conjures up images of devastating, high mortality-rate plagues, in reality, thanks to the changed nomenclature, the term is now used to define COVID-19 which has Low Infection Fatality Rates.

Coding changes to Death Certificates, for COVID-19 only, also continue to distort reality. Had coding changes not been altered in March 2020, the COVID death rates would be substantially lower. (3) When people see high numbers of deaths falsely attributed to COVID, they become fearful — which is part of the plan- but the fear is not reasonable. It is not based on real mortality rates.

It doesn’t end there. Some argue that mRNA experimental injections are not vaccines because they basically alter a person’s DNA using synthetic RNA. Typical vaccines do not do that. Problem solved. Merriam -Webster recently changed its definition of “vaccine” to cover the mRNA experimental jabs as well.

Rocco Galati @roccogalatilaw · 5m

Wow. Alice in Wonderland with goose-steps.

Gary Conway 😊 @gazcon · Mar 21

How the Merriam-Webster dictionary defined the word "vaccine" in January and how it defines it today.

They're literally changing the meaning of words to fit the narrative.

The screenshot shows a web browser with a calendar overlay for January 2021. The browser address bar shows 'https://www.' and a search bar with 'Go'. The Merriam-Webster logo is visible in the top right corner. The main content area displays the word 'vaccine' as a noun. Below the word is a 'Save Word' button and the pronunciation 'vac·cine | \ vak-'sēn \, 'vak-,sēn \'. The definition of 'vaccine' is provided in two parts: a general definition and two specific definitions labeled 'a' and 'b'.

vaccine noun

Save Word

vac·cine | \ vak-'sēn \, 'vak-,sēn \

Definition of vaccine

: a preparation of killed microorganisms, living attenuated organisms, or living fully virulent organisms that is administered to produce or artificially increase immunity to a particular disease

a : an antigenic preparation of a typically inactivated or attenuated (see [ATTENUATED](#) sense 2) pathogenic agent (such as a bacterium or virus) or one of its components or products (such as a protein or toxin)

b : a preparation of genetic material (such as a strand of synthesized

The WHO also changed its definition of "herd immunity" by negating natural herd immunity from the definition and by attributing it exclusively to vaccines.

Angelis Dania @NeotipPro · 2m

In 2020, the human immune system was officially erased.

Mr. Beavy - Democracy NOT Technocracy @ScreaminBeva · 19h

Replying to @SConwaySmith and @NikolovScience

WHO changed the definition

HERD IMMUNITY Before 2020

Herd immunity (also called **herd effect**, **community immunity**, **population immunity**, or **social immunity**) is a form of indirect protection from **infectious** disease that occurs when a sufficient percentage of a population has become **immune** to an infection during a sufficient or minimum time (which means that a number of immunized individuals are needed for a given time to achieve the goal of collective immunity), whether through **vaccination** or previous infections, thereby

HERD IMMUNITY After 2020

'Herd immunity', also known as 'population immunity', is a concept used for vaccination, in which a population can be protected from a certain virus if a threshold of vaccination is reached.

Herd immunity is achieved by protecting people from a virus, not by exposing them to it.

The astute observer will see the very transparent beneficiaries of these changes in nomenclature.

Financial interests, Big Pharma, and globalists imposing lockdowns would be some of the front-line beneficiaries.
