

Boom: Florida Forcing Labs to Report Number of PCR Test Cycles—Game Changer

If the governor of Florida handles this breakthrough correctly, it could be the beginning of the end for one widespread piece of COVID test fakery...

And the beginning of the end of “rising case numbers”

As I’ve reported, COVID testing labs never tell doctors or patients how the PCR test is run. [1]

This means the number of cycles is a secret.

A cycle is a step up in amplification of the tissue sample taken from the patient.

As even Tony Fauci has asserted, tests run at 35 cycles or above are useless. [1] [2] They’re also misleading. The results tend to be positive, meaning the patient is “infected with the virus.” But this is false.

However, as I’ve also reported, the CDC and the FDA recommend that the test should be run at up to 40 cycles. [1] [3] This is a direct hustle. It ensures false positives and higher COVID case numbers—used as justification for lockdowns.

Now, the state of Florida is doing something unheard of. It’s demanding that labs report the “cycle threshold” for every test they run.

Here is the relevant wording in a release from the Florida governor, Ron DeSantis, and the state Department of Health, dated December 3, 2020 [4]:

“Cycle threshold (CT) values and their reference ranges, as applicable, must be reported by laboratories to FDOH via electronic laboratory reporting or by fax immediately.”

“If your laboratory is not currently reporting CT values and their reference ranges, the lab should begin reporting this information to FDOH within seven days of the date of this memorandum.”

We can assume there is only one reason for this order. The Florida governor and the Department of Health are aware that tests run at 35 cycles or higher are useless and misleading, and they want to stop this crime.

Imagine what happens if the trend of “new COVID cases” in Florida soon takes a sudden dip and keeps on falling—because labs are finally telling the truth. Because their deceptive test results are being rejected. The con will be exposed.

And imagine other states following Florida’s example.

I have a few concerns. The term “cycle threshold” is taken to be more or less synonymous with “number of cycles.” But I would prefer Florida simply say: “All labs must report the number of cycles for each PCR test they run.” For me, that would be clearer.

And then, down in the Florida memo, we have this: “If your laboratory is unable to report CT values and their reference ranges, please fill out the brief questionnaire attached to this memorandum and submit by facsimile to the FDOH’s Bureau of Epidemiology confidential fax line...” [the link to the questionnaire is in [4]]

Unable to report? Why would any lab be unable?

The questionnaire offers two bizarre possibilities. The first: “Although the qualitative result is generated based on a CT value, the assay/instrument does not provide the user [the lab] with the actual CT value—it only provides the qualitative result.”

What?? This indicates the lab’s PCR equipment is internally pre-programmed to run the test at a certain number of cycles, and the lab doesn’t know what that number is, can’t find out, and can’t demand the equipment manufacturer disclose that vital piece of information. ABSURD. We’re dealing with a state secret?

The second item in the questionnaire for labs: “The laboratory does not have a separate mechanism to report the CT value to FDOH [Florida Dept. of Health] since the CT value does not get reported to the submitting provider.”

No mechanism for reporting? SET ONE UP. Email, fax, pencil and paper, carrier pigeon. Also ABSURD.

As always, the devil is in the details. I’m sure many labs will try to avoid reporting. They don’t want to be exposed as the charlatans they are.

Memo to Florida Governor DeSantis: Don’t let the labs weasel out of this one. Don’t let them give you excuses. Don’t let them off the hook. Failure to report true facts during a public health crisis is felony. Charge a few labs, drag them into court. Put fear of prosecution into state labs. You’re on the right track. You’ve made a major breakthrough. You see the con at work. You don’t want your state to be pressured into lockdowns based on fake case numbers derived from deceptive tests. Now make sure your enforcement personnel crack down on reluctant labs. Go the distance. If labs have equipment pre-set for the number of cycles, and they don’t know how to get inside the equipment to find that number, bring in pros who will do the job for them. I believe you’ll uncover a major scandal. Much of that equipment will be pre-set for 40 cycles. Keep updating the public on what you discover. Blow this crime wide open. Keep a very close eye on your public health officials. Among them, you’ll find agents who don’t want the truth to emerge. They’ll try to sabotage your good efforts every which way they can.

DON’T LET THEM.
