

# Fukushima and the Dumping of Radioactive Materials into the Ocean. Enormity and Scale of this Unspoken Global Crisis

TEPCO Drops Bombshell About Sea Releases; 8 Billion Bq Per Day: For How Long? They Have Just Admitted They Are Killing Our Oceans

*It came as no surprise, to those following the ongoing nuclear melt-downs at Fukushima, and the continuation of pouring seawater to cool the Corium masses, the T.E.P.C.O would "simply run out of room" for the highly radioactive waste water created and stored in the large tanks on the site.*

"We knew they would have to eventually dump into the Ocean", stated Ray Masalas, of the International Watch Group, Rainbow Warriors. "Not only were they illegally transferring waste into the ocean before seeking permission from affected groups, but they continue the practice now daily"

T.E.P.C.O have continually tried to allay Global concern over the illegal (by international treaties and definition) releases of radioactive cooling water into the Pacific Ocean.

A List of Failed T.E.P.C.O mitigation attempts.

1. Diversion channels for ground water around the reactors
2. Sea barrier in the harbor wall
3. ARRIVA filtration system
4. Ice wall around the reactors
5. On site storage tanks.

Since the failure of the above mentioned, TEPCO have no choice but to pour the cooling water straight back into the Pacific Ocean from whence it came, after assurances that this practice was never going to happen.

The implications and ramifications for the Pacific ocean, and food chains around the world, is a fact and an eventuality, no longer a possibility.

As this is a first time Global crisis phenomenon, there is no data, no science and no research to lead us on with a solution, nor guide us with any protective measures as to the ongoing crisis.

TEPCO released the following information on sheer volume of the highly toxic, deadly radiocative releases going on, on a daily basis from Fukushima.

The World's Media is silent, and one has to conjecture that it is because of the enormity and scale of this crisis on a Global level, that they choose to remain so.

August 26th, 2014

TEPCO made the startling admission today at a press conference that the plant is leaking 8 billion bequerels per day. (8 gigabequerels)

5 billion bq of strontium 90  
2 billion bq of cesium 137  
1 billion bq of tritium \* (later corrected to 150)

This is the ongoing daily release to the Pacific. These release numbers are also within the realm of what some oceanographers have been warning about since last year, that there was an ongoing and considerable leak to the sea. According to journalist Ryuichi Kino TEPCO said this may be due to failings of some sort within the "glass" wall at the sea front. This is an underground wall made in the soil by injecting a solidifying agent to block water flow.

This daily release would add up to 11,680,000,000,000 = 11 terabequerels over 4 years time in addition to the initial sea releases during the meltdowns.
