In-depth Report: [Nuclear War](#)

Fukushima Reactor # 4

“Should the public discover the true health cost[s] of nuclear pollution, a cry would rise from all parts of the world and people would refuse to cooperate passively with their own death.” Dr. Rosalie Bertell. “No Immediate Danger,” xiii.

I write this article not just as a long-time environmental writer and author, but also as a survivor of the horrific 2003 1-million-acre Southern California FIRESTORM that took many lives (both human and millions of animals) during the three-and-a-half-weeks of out-of-control blazes and 400-foot-high walls of flames throughout San Diego and Orange counties. This nightmare blanketed a vast area from over the border into Tijuana up to just south of Los Angeles. Many “back county” areas and national and state parks were also destroyed. Hundreds of thousands of us could not evacuate because planes were grounded and the flames crossed over many freeways. Death and destruction continued for many years after. Many of my friends have died since then, due to fire-related illnesses, as the entire area was blanketed with a spew of toxins. As with the tragedy of September 11th, when Christy Todd Whitman said New York’s air was okay, our local “public” officials refused to monitor the air. Finally, unable to breathe, even with a high-tech respirator, I called the county with warnings. San Diego air “quality” samples were posted for only three days and then conveniently disappeared. Toxins were off the scale.

We had just 15 minutes to evacuate, when the helicopter flew overhead at 7 a.m. My entire neighborhood of 2,000 was destroyed, as well as 90 percent of all the wildlife! It was deliberately torched, and people and animals died. When we were finally allowed “home,” all that was left was burn, ash, skeletons of trees, and hot soil. I know what it means, day-to-day, to just barely survive a countywide catastrophe. I know what deep trauma is all about. I know how everyone in charge lies and deceives those of us in extremis. I know that when a place in the US is declared a “Federal Disaster” area, this quite literally means: “tough, you are on your own. There will be no help.” My heart aches for the people in Japan who are directly in harm’s way, while their government continues to make nuclear corporate profits the priority over the safety of millions of Japanese. It is criminal; and it happens all over.

During and for years after the FIRESTORM, public officials lied and deceived us. Insurance

companies refused to honor thousands of policies, and many of us had to take them to court...but even the "justice" system is rigged. From the mayor and fire officials to the governor and a so-called "Blue Ribbon Commission," the 14 arson fires and their causes were all covered-up. No one was held accountable. No one told us the truth. Further, we barely had any real help in clean-up or recovery –even if we had insurance. Knee-deep in warm ash, I shoveled it myself over seven-and-a-half months, with only 5 days of help. Thousands of us had to do it ourselves...even to getting our own Relief Center set up –again, because officials gave us the run-around.

A week-and-a-half into the Fukushima nuclear disaster, this is what is happening:

1. There are 4 reactors in various stages of collapse, releasing untold amount of dangerous radiation. Two more reactors may also be at risk.

2. The public generally has not been told that, in addition, there are 40 years of spent fuel rods on this already contaminated site. See:

www.infowars.com/alert-fukushima-coverup-40-years-of-spent-nuclear-rods-blown-sky-high

3. Other fuel rods are fully exposed (meaning, unknown amounts of release of radiation) because they are no longer covered with the necessary 45-feet of water.

4. Last week the US refused to post online whatever radiation levels they were monitoring as radiation hits the West Coast and comes East. Then there were several reports that their monitors [all of them?] went off line, or crashed. It is doubtful that any official will report the truth. See:

www.washingtonsblog.com/2011/03/you-can-view-official-epa-radiation.html

The lies, criminality, and cover-up continue. This is how a totally broken system "works." See:

www.globalresearch.ca/index.php?context=va&aid=23676

and

<http://www.infowars.com/pentagon-cover-up-of-data-on-fukushima-disaster>

Here is some additional excellent information about reactors and the extreme dangers of nuclear power:

1. Keith Harmon Snow's "Nuclear Apocalypse in Japan. Lifting the Veil of Nuclear Catastrophe and cover-up":

www.globalresearch.ca/index.php?context=va&aid=23764

2. A report from the New York Academy of Science has been published on "Chernobyl: Consequences of the Catastrophe for People and the Environment":

www.globalresearch.ca/index.php?context=va&aid=23745

3. List of US nuclear plants:

www.animatedsoftware.com/environm/no_nukes/nukelist1.htm#MidWest

Realistically, the Japanese catastrophe could last months or years, given the half-life of many radioactive particles. We don't know, because no official or agency is reporting the truth, while we all are in danger of radiation exposure. How much? For how long? What kind (cesium, iodine, plutonium, strontium, uranium, all radioactive and each with different half life)? I think this catastrophe will turn out to be far worse than Chernobyl because again profits taken precedence over safety. See:

www.youtube.com/watch?v=QtriAolCyow&feature=player_embedded

and

www.nytimes.com/2011/03/14/world/asia/japan-fukushima-nuclear-reactor.html?ref=asia

I URGE EVERYONE who has access to a good Geiger counter or other monitoring technology to monitor radiation levels -most especially on the West Coast; and all other US states, as it comes East on the Jet Stream. Some radiation has already been reported in Washington state. One website is already monitoring the situation in real time in Santa Monica (near Los Angeles), CA:

www.enviroreporter.com/2011/03/enviroreporter-coms-radiation-station

But we need much more collecting and reporting of radiation data. This is extremely urgent! Remember, for the past 12-15 years, our weather and air have been altered and deliberately manipulated. All along the Pacific Coast, from San Diego, Los Angeles, San Francisco, Portland, Seattle, and Vancouver, we need real-time radiation figures. This goes for Canada, too. We can post these results on this website and others, so we can have an accurate collective picture of the on-going radiation dangers we may be facing throughout North America. This is a highly dangerous, yet invisible and real threat to our safety and wellbeing -most especially for children who are most vulnerable! [I also remind readers that the ENTIRE Gulf of Mexico, and its nearby southern states, continues to be poisoned daily in an unmitigated crisis!]

From the very beginning, nuclear energy has been totally unsafe. Even early on in the 1950s, when there were nuclear tests in Nevada, citizens were never warned about the extreme toxicity and dangers to which they were exposed. For our entire lives, the nuclear industry has done decades-long media campaigns to give us misinformation and lies. It's all about greed, but never about our safety or well-being. The US government has indemnified these companies, just as they have done with the pharmaceutical companies and their dangerous drugs. We are all expendable, except as uninformed consumers to buy their toxic products, and then for the next generation to repeat this insanity. With each new generation that is less well educated (dumbed-down, and often on prescription drugs from an early age), there is less information, no accountability, but millions more people who now are far more ill from an environment rife with thousands of poisons that surround our every move.

Some of the Nuclear Dangers include:

1. The reactors have design flaws, as does Fukushima's Mark 1, built by GE.

There are many of these same-designed reactors here in the US. On March 16, the NY Times reported some of these flaws. But, it is just the tip of the proverbial iceberg:

www.nytimes.com/2011/03/16/world/asia/16contain.html?_r=2&nl=todaysheadlines&emc=tha2

2. For radioactive nuclear waste, there is no safe or secure storage anywhere on this planet. There are 1,623 hazardous Superfund sites all over the US (such as Hanford Nuclear Reservation, built in 1942, near Richland, WA, and the now highly polluted Columbia River) leaking radioactive poisons on a daily basis for decades. There is another working nuclear facility, San Onofre, located between San Diego and Los Angeles along the beach right on the Pacific Ocean. This facility was built on the San Andreas fault, an active earthquake zone. The nuclear contamination is enormous and, every day, this puts us all at risk. Dr. Rosalie Bertell, one of the world's leading authorities who has written extensively about the spectacular flaws and true costs of nuclear energy, notes: "The problem of secure storage of nuclear waste...remains dangerous for millennia." [See also her quote at the beginning of this article.]

3. The half-life of many radioactive elements is thousands of years. There is no safe level of exposure! It's all Orwellian media hype and corporate lies. The plutonium fuel used at Fukushima Unit 3 reactor uses MOX [mixed oxide], a plutonium-uranium fuel mixture. A single milligram of MOX is 2-million times more deadly than enriched uranium. NOTE: Plutonium-239 has a half-life of 24,000 years; and Uranium-235 has a half-life of 700-million years.

4. Hiroshima and Nagasaki Atomic bomb survivors are still being monitored. Birth defects, cancers, and miscarriages are high, just as these continue to be so at Chernobyl. This April 25, it will be 25 years since Chernobyl's nuclear catastrophe. Sterility figures (for human and all other life) continue to increase. Nothing is healed. Nothing is fixed for millions of people. The children are most vulnerable, and suffer enormously.

5. The horrific on-going crisis in Iraq [an ancient culture was illegally invaded and destroyed!] is also greatly exacerbated due to US bombings of Depleted (Radioactive) Uranium, poisoning the entire population. Now, illness and birth defects are common throughout the entire Iraqi population. It is all for control of their oil. Afghans were also illegally bombed with DU. Is Libya next with yet another illegal invasion and DU bombings? None of the real and tragic stories are ever reported by the mainstream corporate-controlled media. This is in violation of international law and the Geneva Conventions. This is heinous! However, it all is irrelevant how much harm is perpetrated on innocent civilian populations when criminals are in charge. War is big business, while the rest of our economy is in a state of deliberately orchestrated collapse.

Connecting the Dots of Harm

The new report (#53) from GEAB [Global Europe Assessment Bulletin] published on March 17 from Brussels also is important news not generally reported. GEAB has been quite accurate in their evaluations, as the US economy (everything but military expenditures) continues to be intentionally destroyed:

www.leap2020.eu/Global-systemic-crisis-Second-half-of-2011-Get-ready-for-the-meltdown-of-the-US-Treasury-Bond-market_a6091.html

Last week world-renowned author Dr. Helen Caldicott, co-founder of Physicians for Social Responsibility, gave a lecture in Montreal on the dangers of the nuclear age. Dr. Caldicott

has spent almost 40 years educating the public about the serious medical dangers surrounding this topic and the now very urgently needed changes in human behavior to stop the extensive environmental devastation. Although the lecture has not been posted online, here is a recent interview (March 12):

www.globalresearch.ca/index.php?context=va&aid=23663

Finally, there are other enormous concerns regarding our safety and well-being, because there is absolutely NO PRECAUTIONARY PRINCIPLE in place. That is the elite insider's plan: grave harm! We MUST address these vital issues on a grassroots level, because those in charge are the ones causing us such extreme injury. We will need the help of independent scientists and health-care providers. It is a given that we no longer have any real air "quality." What we are breathing with every single breath is a hazardous, now plasma-state, spew.(1) This impacts our immune system at the cellular DNA level. How will the thousands of tons of aerosolized poisons in Chemtrails, sprayed around the world, interact with radioactive materials (especially those with a long half life)? What might be the detrimental synergistic interaction(s) among the nano-Morgellons-fibers (that Clifford Carnicom has been researching microscopically for a decade(2), found in human, animals, and environmental samples), the nano-particles of fiber-coated aluminum, and now-unknown quantities of various radioactive particles?

How might all of this also interact with possibly thousands of tons of deadly Corexit 9500 dispersant sprayed (on land and over water for many months) and the unconscionable release of "Synthia," a genetically modified synthetic genome bacteria now replicating exponentially throughout the Gulf of Mexico.(3) Tragically, the Gulf is now a biological and chemical war zone. However, it is all happening on an invisible level. This hazardous Gulf spew is in addition to what is heading our way from Japan to North America and thence to Europe and Asia. We must wake up. There is much we can do! Will YOU help?

NOTES:

1. Clifford Carnicom discusses the plasma state and other vital environmental issues in a recent web interview:
