[Global Research Fundraising: Stop the Pentagon's Ides of March](#)

First published by GR on March 27, 2024

The article "Harvard Shuts Geoengineering Project" by Cauf Skiviers, explains Bill Gates, funder of the project, stopping Harvard from carrying out the study to preserve the climate narrative, see [this](#).

How is this relevant?

That Bill Gates calls the shots on what should and should not go forward is nothing new. Surprising is that he was willing to finance such a study in the first place. Why?

The honest results of the research would have shown the outright "climate change" fraud humanity has been exposed to for more than three decades.

The study's outcome would have gone in the complete opposite direction of the current western globalist plan, the World Economic Forum's (WEF) Great Reset and the UN Agenda 2030, One World Order, One World Government. Their success being largely based on the "climate" lie.

Geoengineering serves two purposes, falsely demonstrating the Green Agenda's fake CO2 emissions-based climate change, and – of equal importance – making weather and climate to Weapons of Mass Destruction (WMD).

The outcome of the study would have been against those who want to destroy the world's economy and social structure as we know it, to rebuild it afresh, according to the elites' desire. See *Club of Rome's "First Global Revolution"* (1991); and [this](#).

The revelation of the now canceled Harvard research would have allowed just about anyone marginally aware of what is happening to Mother Earth's climate, to see through the scam. It would have been difficult to avoid leaking the study's outcome of such a hyped-up topic, like "climate change", to the public.

Imagine Harvard research would destroy a political agenda, as well as Big Business. It would reveal that the climate narrative of the "Green Agenda" is a lie and that the weather almost everywhere on the globe is manipulated – or to use the scientific term "geoengineered."

More than three decades of intense "fake science" and media manipulation about humans' CO₂, methane, and similar greenhouse gas emissions, is the culprit for "climate change", have left most people, even non-active, often "bought", so-called scientists, under the impression that doomsday is just around the corner, if we keep using hydrocarbons (oil and gas) to fuel our economy and keep using agriculture to feed humanity.

These alarm bells are constant calls to decarbonize civilization. Yet, the use of hydrocarbons (mostly oil and gas) to run the world's economies has hardly changed in the last three decades. In the early 1990s about 87% of all energy used worldwide came from oil and gas. The figure is almost the same today.

It is a big lie. The climate is NOT changing, at least not more than it has always changed over the past four billion years – normally by small increments, so that life on earth can adapt and adjust.

According to Spain's State Meteorological Agency (AEMET), there are currently more than 50 countries which have at least some technologies to change the weather and climate. See [this](#).

Those with the most sophisticated knowledge are the United States, Russia, and China.

It is fair to assume that the 50-plus nations are "modifying" the weather or climate according to what benefits them most. It is also fair to assume that today there is worldwide almost no weather completely natural, but influenced either directly, or indirectly, through modified weather patterns elsewhere in the world, the collateral effect of geoengineering.

In olden times, it was called "the butterfly effect" – meaning the butterfly flaps its wings and will have an effect somewhere in the world. You do not know where and what. With geoengineering that can be very dangerous.

Obviously, weather modifications, so far, serve primarily the fake *climate change agenda*. When a super hurricane hits the Caribbean, or a prolonged Monsoon floods and destroys two thirds of Pakistan, including her economy, it exponentially exceeds the "normal". Blame it on "climate change".

But most often there is an economic and / or political agenda behind it. Take Hurricane Katrina that hit New Orleans on 29 August 2005. Some 1,800 people died. With 230 km / hour, Katrina made landfall in Southeast Louisiana and destroyed New Orleans.

While the State of Louisiana evacuated about 1.5 million people before the hurricane hit, 150,000 to 200,000 stayed behind, mostly black people in "old" New Orleans, often run-down, but potential prime real estate for developers; was to be razed for luxury-style

rebuilding.

The original owners were later force-evacuated to FEMA (Federal Emergency Management Agency)-provided “emergency” camps (shacks), all over the country. So, the force-refugees could not organize. The properties were taken over by the state and city. This served both an economic and political agenda.

In June through August and into September 2022, Pakistan received about three times as much rain as normal. The deadly disaster was blamed on “climate change”. See [this](#).

In reality, the catastrophe is suspected of having been geoengineered, and had a political agenda. On 10 April 2022, the popular, democratically and by a landslide elected President, Imran Khan, was ousted through a parliamentary non-confidence vote, instigated and “influenced” by the US because Mr. Khan refused to follow orders from Washington but instead intended to be President for an independent Pakistan and for the People of Pakistan.

For weeks, people took to the streets by the millions, creating national unrest, wanting their President Imran Khan back. Creating or geoengineering the destructive Monsoon floods was a means to stop the social upheaval so that the country could follow the western / Washington imposed political agenda, which meant foremost no political or business relations with China.

This is weaponized geoengineering.

When geoengineering serves as a weapon for Super-Powers, the dangers may be equivalent or worse than from nuclear weapons. Because most people have no clue that these weather “disturbances” and climate disasters are manmade and targeted for specific purposes at an “enemy”.

To get this right, geoengineering is NOT *manmade* in terms of what the Green Agenda interprets *manmade* “climate change”, as in CO2 emissions, greenhouse gases and more of

the like. Geoengineering is dangerous. The Green Agenda *climate change* claims are sheer bullsh*t.

Geoengineering has been developed since the early 1940s. It started out with simple cloud-seeding, to prompt rainfall, mostly for agricultural purposes. It then moved to more sophisticated weather and climate manipulations, using the infamous chemtrails, white “vapor” stripes emanating from airplanes, crisscrossing the blue skies, disseminating poisonous chemicals and microscopic heavy metal particles, to influence the climate – but also, and possibly more important, to affect people’s health in very negative ways.

There are hundreds if not thousands of patents out there for these chemicals and heavy metals coming down from the planes into the ground, into the water, into plants and vegetables and finally into our bodies, killing our Pineal Gland and gradually weakening our bodies.

Geoengineering also includes the High-frequency Active Auroral Research Program (HAARP) and similarly sophisticated technologies. HAARP, more recently under the auspices of the Pentagon-linked think tank DARPA (Defense Advanced Research Projects Agency), is controlled by the US Air Force. HAARP is possibly the world’s most capable high-power, high-frequency electromagnetic waves transmitter, acting on the ionosphere.

HAARP technologies often applied from satellites, can emit electromagnetic waves piercing deep into the earth, creating earthquakes. It is suspected that HAARP technologies were used to cause the 6 February 2023 Turkey/Syria earthquake of 7.8 Richter scale strength, killing more than 60,000 people.

Rescuers carry a victim on the rubble as the search for survivors continues in the aftermath of an earthquake, in rebel-held town of Jindires, Syria, February 7, 2023. [Source: usnews.com]

The seism happened shortly before Recep Tayyip Erdogan was reelected in May 2023 as

President of Turkey. The earthquake's epicenter was in Turkey's Kahramanmaraş province, with seismic movement taking place along the *Conjugated Tectonic Faults*. Strangely and remarkably, however, ***the tremors defied the natural patterns and do not fit into the usual mainshock-aftershocks sequence.***

This was also the time when President Erdogan refused to approve Sweden and Finland into NATO, despite the tremendous pressure of all 29 other NATO countries – to put NATO even closer to Russia, the western-made non-conform enemy that needed to be “subdued.”

This would be weaponized political geoengineering, with an economic side effect.

The 12 January 2010 Haiti earthquake of 7.0 magnitude left the capital city Port-au-Prince devastated and killed about 220,000 people. Sizable off-shore oil and gas deposits are all over the Caribbean, and also off-shore of Port-au-Prince.

These petrol reserves, are so deep that it is uneconomical to exploit them at current depths. A seismic event will break the tectonic plates, so that the earth's core pressure pushes the oil to higher levels, where exploitation is easier and more economical.

Haiti has been in chaos ever since. The Clinton Foundation set up allegedly to help rebuild Haiti, has been a disaster, causing more harm than good, and making the Clintons richer. Destabilizing the country is a good reason for the US to maintain steady control.

Haiti is the world's first and only country inhabited by black slaves that fought for and obtained independence 220 years ago (January 1, 1804). Washington pretends, Haiti could become a *national security threat* – like Cuba! – and must be controlled. See [this](#).

The giant Haiti tremor also served two interests: economics, as in oil; and politics, as in control.

Geoengineering is a convenient and highly effective weapon to dominate or coerce countries into submission. The geo-weapon's potential could explode exponentially during the coming years, decades, if people remain ignorant about its menace for humanity.

A Harvard study divulging what geoengineering does and can do would not only derail the entire fake “climate change” narrative, but might also risk taking steam out of the growing geo-weapons industry.

Therefore, ***“Solving the ‘climate crisis’ is indeed bad for business and bad for politics”***, and even worse for strategic warfare planning. So, Bill Gates was right in stopping the *Harvard Geoengineering Project*. Geoengineering may, therefore, prosper, bringing rain, shine and – war.
