In-depth Report: [THE H1N1 SWINE FLU PANDEMIC](#)

Rarely in the annals of history have we seen such a humongous hoax as the recent “H1N1-pandemic”. What reportedly began in Mexico last spring in Vera Cruz state, at an insalubrious industrial sized pork farm was then upgraded from to a global health crisis. Nine months later it has ended with allegations of an immense imposture on a world-wide scale. A presumably fake flu scare was orchestrated and carefully coordinated apparently from within the WHO’s inner sanctum, in order to boost vaccine sales and the profits of the pharmaceutical industry. Were we all fobbed and sold of bill of goods? Was the “false pandemic” really a hoax or are accusations coming from medical experts such as Dr. Wolfgang Wodarg (www.wodarg.de/english/index.html) just conspiratorial blather?

Well let’s look at it from this standpoint. Out of a total planetary population of around 6.8 billion people, only approximately 15,613 deaths [not all of which were actually confirmed] have been directly attributed to H1N1 as of late 2009 (www.flucount.org). In 1918, by comparison the mortality level attributed to the “Spanish flu” was 50 million deaths. This was a whopping 3 percent of the total world’s population which was 1.6 billion at the time. So just based on this measurable scale the Swine flu was indeed a big dud.

Despite this epidemic’s low mortality rate, it was never the less judged by both national government’s medical experts and the UN health officials in Geneva to be a “pandemic”. This alarmist term has been used irresponsibly in a “fast and loose” manner to seemingly panic people and get them to go get jabbed to the delight of the vaccines’ manufacturers. Officials during the height of the hysteria around June, spread highly exaggerated pronouncements about the extent and virulence of the “deadly outbreak” among the populace. Of course this was designed to deliberately scare the populace and it engendered a pandemic of fear which spread further and faster than the H1N1 –Swine flu bug itself.

Misusing terminology and making misleading claims

Pandemic, of course originates from the Greek words “pan” mean all and “demos” or people. Hence an outbreak of a dreaded contagious disease in order to qualify as a “pandemic” must affect the vast majority. This was certainly not the case in Mexico . Yet at a “critical” period in late April 2009 there were 148 deaths “suspected” to be (<http://www.washingtonpost.com/wp-dyn/content/article/2009/04/27>) directly related to the flu. They occurred in an urban centre with over 20 million people. The “pandemic” prompted a virtual state of emergency to be enacted, which practically paralysed the entire capital.

Not only did governments evidently over- sell the severity of this virus as if it were a great deadly plague, and in the process mislead the public, they were also apparently and willingly gouged by “Big -Pharma” which over -charged their national clients to the delight

of the vaccines' manufacturers. (<http://www.guardian.co.uk/world/oct/11/swine-flu-vaccine-baxter>)

The H1N1 “hoax” turns into a full- fledged “fiasco”

In France the Swine flu “fiasco has resulted in millions of unused doses of the H1N1 vaccine piling up as it approached its expiry date in government warehouses. Since the mass vaccination campaign began last October, around 5 million people go the jab. The French health ministry purchased 94,000 million doses more than would cover the entire population of the country at a cost of \$ 1.25 billion. The government stuck with vast quantities of doses which are decreasing in potency is frantically seeking to sell off their left -over stocks (but the manufacturers are reluctant to buy them back!). Others countries like Canada, unable to sell off the vaccines, is offloading or sending them to “needier” countries in the developing world as a gesture of their self-less generosity.
