

India 2020: ‘Superpower’ or Still ‘Super Poor’?

By [Andrew Korybko](#)

Theme: [History](#)

The hopes of India's over 1.3 billion people were shattered after their country objectively failed to become the "superpower" that many of their leading "influencers" (read: propagandists) predicted it would be by 2020, with this finally being acknowledged by the popular Hindu nationalist Shiv Sena party last week after it did an about-face by pleading for Trump to reclassify their country as a "developing" one because it "is miles away from the status of developed countries on parameters like education, health, employment, cleanliness and poverty alleviation" and thus supposedly deserves to retain tariff-free access to the American market.

"Superpower 2020"?

Indians entered the current decade with bated breath, having been indoctrinated since shortly before the turn of the century with the completely false expectation that their country would finally become a "superpower" by 2020. They didn't know exactly what this would mean in practice, but it sounded prestigious enough and was a welcome distraction from the abject poverty that marks many of their lives. After all, Prime Minister Modi told them last March that they were now a "[space superpower](#)" after successfully conducting an anti-satellite missile test. He then [declared](#) less than a month later ahead of the parliamentary elections in May of that year that only he could fulfill India's "superpower" dreams. Then-BJP President Amit Shah [seconded](#) this statement shortly thereafter prior to it being reiterated by Modi's Minister of State in September when he [promised](#) his people that India is on the "verge of being a superpower". Once again, nobody ever really explained what being a "superpower" entailed, but the hyper-nationalist population wanted so desperately for the rest of the world to recognize them as one anyhow.

An Epic Disappointment Decades In The Making

That was why it was a disappointment of epic proportions for them that India entered 2020 without becoming the envy of the world like they falsely expected. The popular Indian online news site Scroll.in published a powerful piece at the time titled "[India Superpower 2020: Tracing the brief history of a spectacularly incorrect prediction](#)", which touched upon the 1998 origin of the "superpower 2020" prediction and then explained its viral evolution across the proceeding years to the point where it basically became the country's unofficial slogan over the last decade. Those who had earlier expressed their reservations about this unrealistic expectation were viciously attacked for being so-called "anti-nationals", and if they weren't Indian, then they were usually accused of "Hinduphobia", but those defamatory abuses are no longer relevant after the influential Shiv Sena Hindu nationalist party publicly acknowledged that India isn't even a "developed nation", let alone anywhere near becoming a "superpower".

The US Calls India's "Superpower" Bluff

This was very important development because the organization contributes to framing the national narrative, meaning that Indians might never talk about being a "superpower" again, as if what Scroll.in described in their article as the nation's "collective delusion" over the past two decades never happened at all. Shiv Sena didn't suddenly switch their narrative from one of impending "superpower" status to that of India simply being yet another "super poor" "Global South" country no different from dozens of others just for sake of factual accuracy but because the nation stands to lose several billion dollars a year if it sticks to that debunked script. The US recently reclassified India as a "developed economy" ahead of Trump's [visit to the country](#) later this month where he's expected to sign major [military](#) and [trade](#) deals with America's new strategic partner. [Asia Times](#) reported that this decision was made for technical reasons since India's share of world trade was above the 0.5% threshold qualifying it for "developing economy" status, hence why nearly 2000 of its products are no longer eligible for the Generalized System of Preferences (GSP) regime that had previously given \$5.7 billion in imports to the US duty-free status in 2017, thus making it the largest beneficiary of this program.

\$5 Billion In Economic Restrictions Got Shiv Sena To Switch Their Narrative

Shiv Sena, forgetting all about everything that it had said in the previous years about India's supposedly imminent "superpower" status, [furiously lashed out](#) at the US last week by describing its move as "a big blow to our economy...a big crisis for India."

Walking back its entire narrative of India's "miraculous growth" which had hitherto won it millions of devoted followers all across the country, the Hindu nationalist party repeated the same observations that the nation's critics at home and abroad have been saying for years already, namely that "India is miles away from the status of developed countries on parameters like education, health, employment, cleanliness and poverty alleviation." Evidently, speaking incessantly about India's supposedly impending "superpower" status is useful for winning votes but becomes economically counterproductive the moment that the US acts like it believes that false narrative and then makes moves to eliminate the country's preferential market access as a result. With \$5.7 billion on the line, Shiv Sena had no choice but to tacitly admit that it and everyone else who had been celebrating India's rise as a "superpower" were simply lying this whole time.

It's No Longer "Hinduphobic" To Share Facts About India

There are some crucial lessons that other countries can learn from India's humiliating experience, the most obvious of which is for political leaders to be more responsible when talking to the public about their country's future status. Giving the largely impoverished masses unrealistically high expectations of global prestige using a never-defined slogan such as "superpower" is deceptive to the extreme and strongly suggests that they were deliberately manipulating their people for political purposes, likely to distract them from their dire economic situation with delusions of international grandeur. It's all fun and games until the deadline for "superpower status" finally passed with a whimper and then the US took India at its word by restricting duty-free market access for \$5.7 billion worth of its exports, thus dealing a heavy blow to some of its companies which were dependent on that regime in order to remain competitive. Shiv Sena is right, "India is miles away from the status of developed countries on parameters like education, health, employment, cleanliness and poverty alleviation", but they were wrong for lying about that all this time,

though at least those who repeat the party's new rhetoric can finally speak freely without fear of being attacked as "anti-national" or "Hinduphobic".
