Apparently, it is increasingly difficult to hide the catastrophic situation of the Kiev's war arsenal. According to a major Western media outlet, the neo-Nazi regime will run out of most of its anti-air missiles by the next month. The source of the newspaper would be an alleged leaked Pentagon's document. The case shows once again how unfavorable the military scenario of the conflict is for the Ukrainian forces.

The subject was discussed in a recent article published by the Wall Street Journal. According to the outlet, documents leaked on the Pentagon's official social networks would have exposed an extremely pessimistic forecast about the future of the Ukrainian armed forces, pointing to the nearly total exhaustion of Kiev's anti-aircraft defense capacity. Anti-air missiles are expected to run out in May, which will further complicate the Ukrainian situation and boost demand for new NATO weapons packages in order to prolong the alliance's proxy war.

The forecast is based on a calculation taking into account the recent numbers of the Ukrainian army. Currently, Kiev is expending about 69 Buk missiles and 200 S-300 missiles a month to maintain its defense positions against the Russian air attacks. With these numbers, it is most likely that the Buk missiles will run out in early April and that the stock of S-300s will expire by May 3rd, according to Pentagon's officials in the leaked document.

Indeed, some measures to mitigate the effects of Ukrainian anti-aircraft weakness have already been taken by Western forces. Kiev received three Iris-T anti-aircraft systems from Germany, in addition to eight American NASAMS systems. However, these devices allow a limited number of launches, which do not cover as much territory as the S-300 missiles. This limited aid has made it difficult to efficiently supply new Western missiles to Ukraine, making Kiev still heavily dependent on Soviet-era launch systems.

In this sense, a new wave of broad military support would be needed to overcome the

Ukrainian deficit. The US military, according to what is exposed in the revealed paper, estimate that the necessary number will reach 16 Irist-T or NASAMS batteries and up to 12 Patriot or SAMP-T batteries. It is necessary to remember that recently the American president Joe Biden had already authorized the sending of a Patriot battery, at the same time that Germany, France and Italy promised to supply a SAMP-T system to the neo-Nazi regime. However, this equipment has not yet reached Ukraine, which is why the situation of Kiev's defense has not yet improved.

Since late 2022, requests for military aid focused on anti-aircraft defense have been constant in Ukrainian President Vladimir Zelensky's speeches. He considers this type of equipment a "number one priority", and his advisors have also requested, in addition to anti-missile systems, the well-known US F-16 fighter jets, which have been repeatedly banned by the US government. Some pro-Ukrainian analysts believe that these aid packages would be a kind of "game changer", but renowned experts rule out any possibility of reversing the military scenario of the conflict, regardless of whether NATO weapon reaches the battlefield.

It is important to note that the US government has not yet commented on the case, with the Pentagon being silent on the authenticity of the supposed leak. The matter comes amid a recent wave of releases of classified Pentagon's documents. Other reports from the department were exposed on social networks, including information on sensitive topics such as China, the Middle East and terrorism. There has been strong distrust on the part of analysts about the veracity of these alleged leaks. Some commentators argue that if the releases were true there would be no room for the Western media to report their existence, with a strong censorship initiative trying to hide the incident.

Although there is not enough information to point out the veracity of these leakages, it is possible to say that at least with regard to the Ukrainian anti-aircraft missiles, there is a great possibility that the numbers are real, considering the evident defeat of the Kiev's forces in the battlefield. In a more realistic perspective, it is possible to suspect that in fact there are no "leaks", but that the Pentagon would be deliberately publishing the numbers to increase the fear of a Ukrainian defeat in public opinion, boosting support for the shipment of new weapons.

What we have seen recently is the absolute failure of the "Ukrainian victory" narrative, as Russian advances have made it clear which side militarily controls the combats. Due to this, there seems to be currently an attempt at "damage control", with officials and mainstream media partially admitting Ukraine's defeat. If before the justification for sending weapons was that Kiev would be winning, now it is said that Kiev is losing, but "must win". The aim is to spread anti-Russian fear in public opinion and to convince ordinary citizens that the shipment of weapons is an urgent measure in order to save the West.

In a rational and strategic analysis, it is possible to see that at no time did Moscow show interest in expanding the limits of its military operation, therefore there is no reason for any kind of fear on the part of Western citizens. On the other hand, the exhaustion of Ukrainian forces seems to be good news, since, faced with the inability to continue fighting, the Kiev regime would be forced to surrender, which would end hostilities. This would be the best-case scenario for all sides except for NATO's pro-war elites.
