The Ministry of Covid Compliance is reminding us this week how the virus has a genetic targeting mechanism able to differentiate between essential cans of vegetables, bottles of liquor, lottery tickets and non-essential products like sneakers and paint. Thus the Ministry is able to help us better understand the lock-down policy.

We've been piling into crowded supermarkets for seven weeks buying food, and we are allowed to purchase liquor and lottery tickets. Those purchases are deemed safe by the state; however, it is critical for viral control that we not purchase sneakers or other hazardous items which pose a greater threat of proximity transmission.

Similarly the COVID-19 virus seems incapable of keeping up with the speed of passenger vehicles, buses, airplanes and trains. However, once you exit your COVID compliant transportation, the virus can swoop down and attack you if you are in the proximity of a open-space park or beach.

The Ministry appreciates our compliance in avoiding the dangerous virus freedom zones; and is thankful for compliant citizens who do not question the complex data analysis that goes into regional scientific tracking systems.

To avoid an increased infection rate it is critical for American citizens to only visit Home Depot, Lowes, Costco, WalMart & other large institutional retail systems with influential lobbying offices near the Covid Mitigation Ministry.

Effective compliance and mitigation requires that everyone must avoid the small business operations where the virus is more prone to hide out and attack consumers. The scientific data-hubs in/around K-Street in Washington DC must lead our careful decision-making.

Remember, the Ministry is working closely with regional governors to outline the greatest threat. Walking on a golf course in Massachusetts is safe-behavior; however, if you carry a particularly shaped stick and swing it at a ball, the virus will immediately target you.

These granular distinctions are very important to understand.

In the Ministry of Delaware food trucks are now permitted to operate; however, if you attempt to purchase a dress for Mothers Day, you are putting society at risk.

Currently in most regions the virus is allowing dogs and cats to have their fur trimmed; however, if a human attempts to commercially reduce the length of you sideburns it will create a viral hot-spot potentially putting the health of our planet at risk.

The rebel alliance has noted that specifically random viral targeting appears much more prevalent in the regions where people formerly wore genitalia on their heads. There is a possibility this could be propaganda because there is not enough conclusive scientific data assembled to quantify the merit of this claim. Confirmation efforts remain ongoing.

In almost all regions of ministry control, furniture purchasing seems like one of the most potentially dangerous activities. Out of an abundance of caution these consumer hubs of activity have been shut-down; however, the Ministry is evaluating how the virus would respond if cans of vegetables were placed within the building.

According to the most extensive study conducted so far, commercial buildings with cans of vegetables appear to be the safest venue allowing congregation and proximity. It is unknown if moving canned foods and sandwiches into the furniture stores, or other less traveled venues, would transfer the benefits of virus mitigation. The Ministry has a teleconference with scientists and industry experts scheduled later this week to analyze this question.

In the interim, the Ministry would like to remind you the greatest danger is the type of purchasing you make. Large box retailers with dense populations are safe-spaces. Smaller business with less density are hazards; and houses of religious worship are death traps due to their propensity to promote the most critically dangerous activity of all, *fellowship*.

Because the literal health of our nations' citizens are at risk, we must remain steadfast and resolved to keep all hospitals and patient facilities closed and at precipice of financial ruin.

Remember, we are all in this together; and to prove how critical this is to our society we must all stay apart.

The masks were stolen the first night. Classic Chicago. <https://t.co/FFv4uUtB9k>
