July 21, 2023 - Spearville, KS - Destiny Barnett, a 4th grade teacher, was diagnosed with Stage 3 Hodgkin Lymphoma 3 months after giving birth to Swayde.

Destiny Barnett's Cancer Journey

Melissa Barnett is organizing this fundraiser.

Hello! I have created this to help with the financial stressors that are upcoming for my daughter, Destiny Barnett. Destiny was diagnosed this week with Stage 3 Hodgkins Lymphoma that has spread to her spleen, which is a cancer that affects the immune system. She will be on an intense chemo composed of 4 different chemo medications every other week. She just recently moved with her husband and kids to Council Grove. She will be a 4th grade teacher at Council Grove Elementary this upcoming school year. She is a momma to 2 sweet babies, Briley who is 21 months and Swayde who is 3 months. She has been breastfeeding the baby but has been told she will no longer be able to do this due to the medications and chemo she will be on. Destiny will be making many weekly trips to

July 18, 2023 - Fishkill, NY - Erika Thomaselli gave birth to a new baby girl recently. A few days after giving birth, she was diagnosed with Stage 4 Neuroendocrine Carcinoma.

Erika Thomaselli and Family

Aileen Schatz is organizing this fundraiser on behalf of Anthony Thomaselli.

My sister, Erika Thomaselli is the kind of person who has always been willing to go above and beyond for others. She is a loving mother (to 4 beautiful babies), wife, sister, daughter, and friend. Just a few weeks ago, and days after giving birth to her new baby girl, my sister, a true warrior in every sense of the word, was diagnosed with stage 4 neuroendocrine carcinoma.

When she received her diagnosis, it was a devastating blow to our entire family. Despite the challenges that lie ahead, she continues to approach each day with courage and optimism, determined to fight this battle head-on. Her resilience and strength inspire us all, and we

July 11, 2023 - Traverse City, MI - 32 year old Nina Carder was diagnosed with the "most serious and aggressive form" of breast cancer. She has a 10 month old baby.

Help Nina in her fight against breast cancer

Kate Calder is organizing this fundraiser.

In early July the Carder family received the devastating news that at the young age of 32, Nina has been diagnosed with the most serious and aggressive form of breast cancer called triple-negative breast cancer (TNBC). This grows and spreads quickly with fewer treatment options, making the prognosis poor. It is a dreaded diagnosis for this young family. She will be starting a 6-month chemotherapy cycle next week with possible surgery following. She continues to undergo evaluation for metastasis but her oncology team is optimistic that the cancer remains localized at this point.

Nina is a remarkable mother to Sandro (10 months) and an incredible partner to her husband Alex. She works full-time as a Physician Assistant, caring for her community and sacrificing her sacred family time to help others. If you know Nina, she lights up any room with her presence and radiates positivity and kindness. Her sincere and unwavering spirit has touched the lives of many, and now it's our turn to stand by her side. She hopes to fight this and be around to see the many milestones in Sandro's life.

Nina is very self-reliant and asking for help is not in her nature. She is usually the person giving, not accepting. And so, on her behalf, we are reaching out and are grateful for anything you might be able to contribute, no matter the size. We understand that not everyone may be in a position to donate, but sharing this with your friends, family, and social networks can also greatly help. We sincerely thank everyone for your ongoing support and generosity in helping to relieve the financial burden this family faces.

July 5, 2023 - Linthorpe, UK - 30 year old Fi Leyshon was diagnosed with aggressive metastatic renal cell carcinoma 11 weeks after giving birth. ([click here](#))

Jarrow mum told she has rare aggressive cancer 11 weeks after giving birth

TYNE TEES | HEALTH | JARROW | CANCER | ⌚ Wednesday 5 July 2023 at 12:29pm

*Fi Leyshon has now been told the treatment which had kept her condition stable for the past year is no longer working.

A mum has been diagnosed with a rare and aggressive cancer just 11 weeks after the birth of her baby boy.

Fi Leyshon, from Jarrow, in [south Tyneside](#), has now been told the treatment which had kept her condition stable for the past year is no longer working.

The 30-year-old, who lives in Linthorpe, said she is determined to keep fighting for her little boy, Reuben, and has been overwhelmed and humbled by the outpouring of support since she received the news.

She is urging others to know the symptoms of kidney cancer and visit their GPs if they are concerned something is wrong.

Ms Leyshon has now been told she has stage four incurable and inoperable metastatic renal carcinoma - with the cancer having spread to her liver and lymph nodes.

At the time of her initial diagnosis, Ms Leyshon was told chemotherapy "wouldn't touch" her kind of cancer because it is so rare and aggressive and is usually seen in older people.

May 17, 2023 - Rutledge, GA - Karen Vincent had a C-section at 26 weeks and was diagnosed with Stage 4 metastatic breast cancer that had spread to her bones, liver and brain.

Help Pregnant Mom with Stage 4 Breast Cancer

Meet our cousins, Raymond and Karen Vincent, proud parents of 6 beautiful children. On April 22, after a month of declining health and 26 weeks pregnant, Karen was admitted to the emergency room. What we thought was preeclampsia turned out to be something far more serious.

First, the happy news: Doctors performed an emergency C-section when Karen's condition became unstable, and we are overjoyed to tell you that Alexander Constantine Vincent was born healthy, despite being three months premature. He'll have to stay in the NICU a few more months, which presents its own challenges, but he's healthy and growing and we're so grateful.

However, after surgery, doctors performed CT scans to find the underlying cause of Karen's condition and rapidly deteriorating health.

The scans revealed that Karen had Stage 4 metastatic breast cancer that had spread to her bones, liver, and brain. We were absolutely devastated by this news.

May 2, 2023 - Minooka, IL - Christine Yenser is a mom of 5 and had her 5th baby in Sep. 2022. Just 6 months later she was diagnosed with a Stage 4b Mediastinal B-Cell Lymphoma.

Help support Christine Yenser fight lymphoma!

Kelly May is organizing this fundraiser on behalf of Christine Yenser.

Hi, I am Christine's sister in law. Christine was diagnosed in March with Primary Mediastinal B cell Lymphoma (non-hodgkin lymphoma). She's only 35, and a mom of 5, including a newborn.

The cover photo of her in the hospital was taken in September 2022, right after she delivered her 5th baby, Owen!

Sadly, just just 6 months later she was diagnosed with stage 4b PMBCL.

Jan. 2023 – 32 year old oncology nurse April Addison was diagnosed with breast cancer the day after she delivered her son by C-section. She has no family history ([click here](#)).

Dec. 2022 - Vancouver, BC - 37 year old Aimee Cox was diagnosed with Stage 4 Colon cancer 11 months after giving birth to her daughter. It is so aggressive it has already metastasized to the liver ([click here](#)).

New mom battling stage 4 cancer raising money for treatment outside Canada

Claire Fenton | Dec 11 2022, 4:17 pm

Aimee Cox/Instagram

A Vancouver woman is trying to stay hopeful after she received heartbreaking news just two weeks ago following what she thought was just a dizzy spell due to low iron.

Aimee Cox's initial bloodwork revealed some concerns, and more tests followed in just a few days. By late November the new mother of an 11-month-old daughter says the doctor told her it was not the results they were hoping for.

The 37-year-old was diagnosed with stage 4 colon cancer. The cancer had metastasized to the liver, and a test revealed she had also tested positive for a rare protein which impacts chemotherapy response, called BRAF-V600E mutation.

Sep. 2022 – Sam Lynch had twin girls in Sep. 2022 and less than a week later she was diagnosed with Stage 4 bowel cancer. She is a fully COVID-19 vaccinated nurse.

Donate to help Sam Lynch and her family

Lauren Fenwick is organizing this fundraiser on behalf of Samantha Lynch.

Hi,

This is our beautiful friend Sam. She is a Mother, Wife, Daughter, Daughter-in-law, Nurse and Friend. We are fundraising to help and support her gorgeous family in any way we can through her bowel cancer journey.

Sam gave birth to her healthy, little twin girls in September, 2022. Less than a week later she was diagnosed with stage 4 bowel cancer.

April 2022 – Lancaster, PA – 16 year old Kiera Adkin had chest pain nursing her newborn son. It was a 5×8 inch Stage 3 aggressive T-Cell Lymphoblastic Lymphoma.

Help for Kiera

Khadijah McNeil is organizing this fundraiser.

I am writing on behalf of Kiera Adkin. I was her teacher several years ago and I feel it is important to share her journey thus far.

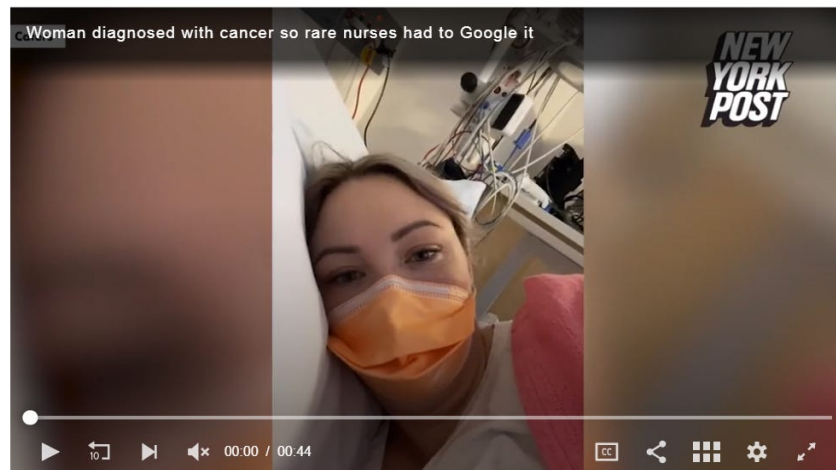

Kiera started feeling pain in her chest in April 2022. She assumed it was from nursing her newborn son, Xavier. However, the pain became worse, prompting her to see a doctor. After various tests, Kiera was diagnosed with stage 3 t-cell lymphoblastic lymphoma, which is one of the various types of cancer hurting, and taking away so many of our loved ones. **She needed immediate surgery to remove the 5x 8 inch tumor from her chest prior to starting treatment for the cancer.** Kiera started her first round of chemotherapy, which rendered her unable to solely care for her son. Kiera's mom quit her job to care for her daughter and grandson. As Kiera receives treatment, she continually experiences constant pain, severe sickness, and other adverse reactions. She also feels she is a burden to others, which has her feeling guilty, anxious and depressed. She is overwhelmed by the uncertainties of the future. Kiera is currently in her third round of intense chemotherapy. She commented how this round of treatment is so much worse than the previous two. She has treatment every other day, which leaves her physically ill, exhausted and weak. Kiera did not want anyone to know about her cancer. She felt embarrassed and did not want any attention. She did not even want to ask for help because "there are so many others in need..." After much coaxing from family and friends, she started this gofundme account/page. Her humble and kind nature had her write very little about her past and current difficulties or the uncertainties that lie ahead... This is why I had to share a little more of her experiences and struggles. She needs help. I am amazed by her strength, and how she consciously chooses every day to stay positive through this extremely difficult time. Kiera is a fighter! Your donations will help lessen her anxiety over the uncertainties of the future for her and her son and allow her some relief as she wins this fight, and she will win... she can be stubborn like that! All of this, and Kiera is only 16 years old... Thank you for taking the time to learn about Kiera. She is an amazing young lady and an even better mommy. Please pray for her and her family.

March 2022 – Melbourne, Australia – 32 year old Darlene Lynch had a baby in Dec.2021 and 2.5 months later she was diagnosed with an extremely rare aggressive choriocarcinoma that had spread to her lungs ([click here](#)).

New mom diagnosed with 'pregnancy' cancer so rare nurses had to google it

By Andrew Court

May 20, 2022 | 2:23pm | Updated

MORE ON: CANCER

New cancer hope as pill 'annihilates all solid tumors' — thanks to this little girl

AI can detect breast cancer as well as two doctors: new study

My doctors walked me down the aisle after I beat cancer

This was declared the 'world's healthiest' food — here's how to eat it

A young mom is fighting for her life after being diagnosed with an extremely rare cancer caused by pregnancy.

Darlene Lynch, 32, welcomed her first child, Cillian, last December before she was rushed to hospital 10 weeks later with severe hemorrhaging.

Doctors subsequently diagnosed Lynch with **choriocarcinoma: a cancerous fast-growing tumor that develops from cells that help an embryo attach to the uterus.**

Almost all choriocarcinomas — sometimes referred to as **"pregnancy cancer"** — form in the uterus after the fertilization of an egg by a sperm, but the cancer is so rare that it only affects one in 160,000 pregnancies and is scarcely talked about.

"I felt it was a really isolating diagnosis because I couldn't find anything about it," Lynch told Caters News Agency on Friday. "When I was in the ward, I'd speak to the nurses and they were like, 'We've not heard of it before, we've not had cases of it before,' and they'd say, 'We had to google it.'"

Darlene Lynch, 32, welcomed her first child, Cillian, last December. Less than three months later, she was fighting for her life after being diagnosed with a rare cancer caused by the pregnancy.

The cancer was so fast-growing that it had already spread to Lynch's lungs by the time she was diagnosed, meaning she was forced to immediately undergo chemotherapy.

Lynch — who resides in Melbourne, Australia — stated: "I didn't have time to think about it. I went into hospital on the Monday and by the Friday I had my diagnosis and on the Saturday I started my treatment."

Sep. 2021 – Singapore – 25 year old Kwa Lay Teng was nursing her four day old baby girl when she received a call with breast cancer diagnosis. ([click here](#))

‘I worried if I would be normal again’: Breast cancer at 25 made new mother rethink life

Ms Kwa Lay Teng in 2019 (left) and after she began treatment for breast cancer following her diagnosis in 2021. PHOTOS: COURTESY OF KWA LAY TENG

Shermaine Ang

UPDATED MAY 31, 2023, 12:33 PM SGT

SINGAPORE – In September 2021, Ms Kwa Lay Teng, then 25, was nursing her four-day-old baby girl during confinement in her mother’s home when she got a call from her doctor.

“He told me: ‘Hi, Lay Teng, I’m so sorry, it is breast cancer. You need to stop breastfeeding now.’ I couldn’t stop crying. My husband was beside me. I didn’t even have to tell him what happened; he knew it was bad. He called my mum who came and took the baby away from me.”

She also had to induce menopause as her hormones fuelled her cancer, a rude shock to her dreams of raising a family of five with her husband. “I was in denial... I worried if I would ever be normal again,” she said.

Almost two years on, her cancer is in remission but her fear – now of relapse – remains.

May. 2021 – Alberta – Carolina Diaz had a growing lump in her breast while 8 months

pregnant. She was diagnosed with breast cancer right after delivery. ([click here](#))

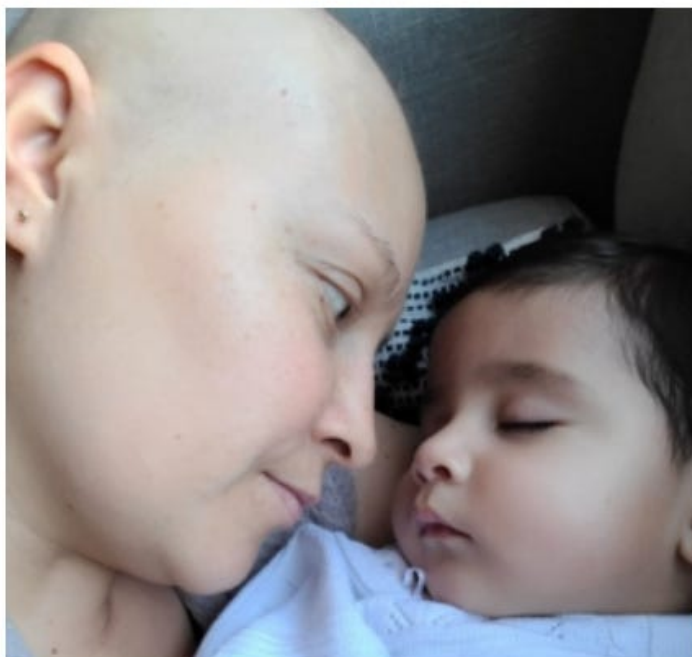

October 31, 2022

Categories: [Blog](#) | Tags: [breast cancer](#), [cancer patient](#), [Tom Baker Cancer Centre](#)

At eight months pregnant, all while mothering a two-year-old, Carolina Diaz discovered a lump on her breast. The Columbian-Canadian knew immediately that there was something deeply wrong. While her gynecologist told her not to worry, that it just had to do with her breast milk, Carolina knew in her heart that this was not the case, "I kind of knew it was something bad". The lump grew after her baby was born, and Carolina was insistent that something was not right. On May 5, 2021, she received her breast cancer diagnosis.

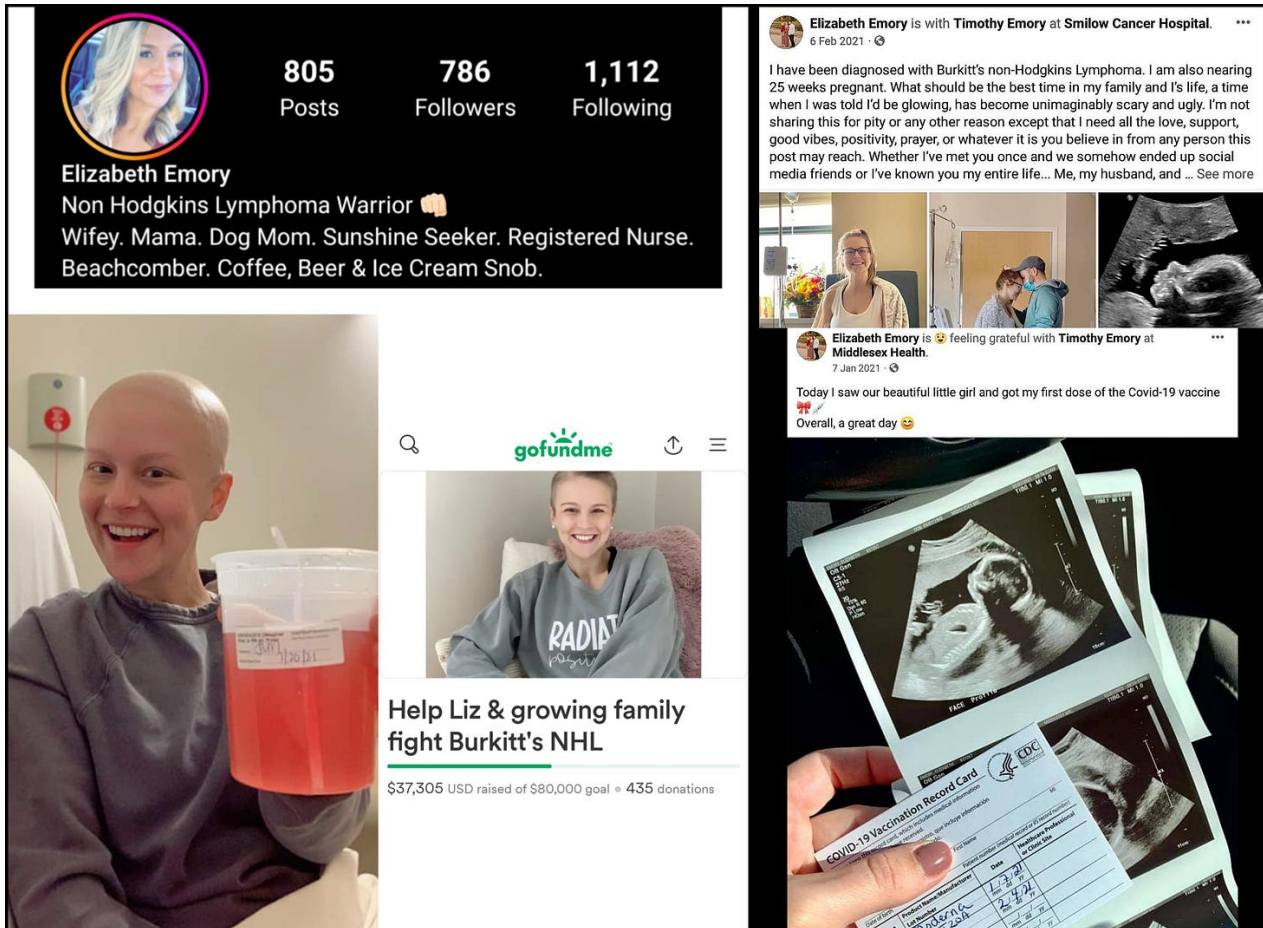

"I couldn't believe that was happening to me," Carolina says.

Three weeks after her diagnosis, and after giving birth to her now one-year-old, Carolina went into surgery for her cancer and began an intense treatment that would take a full year to complete. In addition to the raging hormones and usual parental stress she was experiencing after giving birth to her daughter, Mila, Carolina was forced to face a devastating diagnosis at a time in her life that was meant to be happy and full of life.

Carolina's stress at this diagnosis was largely centered around her children, *"I cannot die because this baby needs me to live"*. To add on to the stress, Carolina's family was still in Columbia. She called her cousin, who is a doctor, to break the news. Her cousin's words shifted Carolina's mindset in a way that would change her journey for the better going forward: *"You have to put into your mind that you're not going to die of this"*.

Feb. 2021 - Glastonbury, CT - 30 year old nurse Elizabeth Emory took two Moderna COVID-19 mRNA vaccines during pregnancy (Jan. 7, 2021 and Feb. 4, 2021). On Feb.6, 2021, at 25 weeks pregnant, she was diagnosed with Stage 4 Burkitt's Non-Hodgkin Lymphoma.

My Take...

These are absolutely horrifying cancer subtypes or late stage presentations.

A brilliant Twitter user who discovered some of these cases, [Janiesaysay](#), asks:

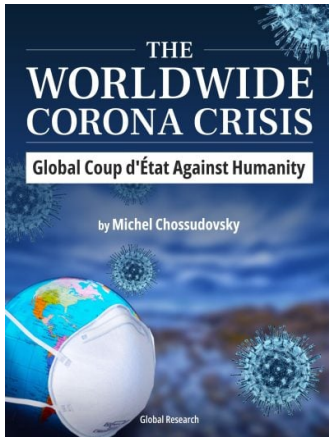

"I am seeing a lot of charity posts for vaxxed new moms with aggressive cancers. Does the vaxx and the pregnancy/lactation hormones drive the cancer?"

It's a fascinating question that needs to be explored.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”
