

# The Nuclear Lies of NATO's Jens Stoltenberg. Brand New "Precision Guidance" Nukes Deployed All Over Europe

By [Manlio Dinucci](#)

*"Russian missiles are a danger" – the alarm was sounded by the Secretary General of NATO, Jens Stoltenberg, in an interview with Maurizio Caprara published in the Corriere della Sera\*, three days before the "incident" in the Sea of Azov which added fuel to the already incandescent tension with Russia. "There are no new missiles in Europe. But there are Russian missiles, yes", began Stoltenberg, ignoring two facts.*

First: as from March 2020, the United States will begin to deploy in Italy, Germany, Belgium, and Holland (where B-61 nuclear bombs are already based), and probably also in other European countries, the first nuclear bomb with precision guidance in their arsenal, the B61-12. Its function is primarily anti-Russian. This new bomb is designed with penetrating capacity, enabling it to explode underground in order to destroy the central command bunkers with its first strike. How would the United States react if Russia deployed nuclear bombs in Mexico, right next to their territory? Since Italy and the other countries, violating the non-proliferation Treaty, are allowing the USA to use its bases, as well as its pilots and planes, for the deployment of nuclear weapons, Europe will be exposed to a greater risk as the first line of the growing confrontation with Russia.

Second: a new US missile system was installed in Romania in 2016, and another similar system is currently being built in Poland. The same missile system is installed on four warships which, based by the US Navy in the Spanish port of Rota, sail the Black Sea and the Baltic Sea close to Russian territory. The land-based installations, like the ships, are equipped with Lockheed Martin Mk41 vertical launchers, which – as specified by the manufacturer himself – are able to launch "missiles for all missions: either SM-3's as defence against ballistic missiles, or long-range Tomahawks to attack land-based objective". The latter can also be loaded with a nuclear warhead. Since it is unable to check which missiles are actually loaded into the launchers parked at the frontier with Russia, Moscow supposes that there are also nuclear attack missiles, in violation of the Intermediate-Range Nuclear Forces Treaty, which forbids the installation of intermediate- and short-range missiles on land bases.

On the contrary, Stoltenberg accuses Russia of violating the INF Treaty, and sends out a warning:

"We can not allow the Treaties to be violated without punishment".

In 2014, the Obama administration accused Russia, without providing the slightest proof, of having tested a Cruise missile (SSC-8) from a category forbidden by the Treaty, announcing that “the United States are considering the deployment of land-based missiles in Europe”, in other words, the abandon of the INF Treaty. This plan, supported by the European allies of NATO, was confirmed by the Trump administration: in the fiscal year of 2018, Congress authorised the financing of a programme of research and development for a Cruise missile to be launched from a mobile platform.

Nuclear missiles of the Euromissile type, deployed by the USA in Europe during the 1980’s and eliminated by the INF Treaty, are capable of hitting Russia, while similar nuclear missiles deployed in Russia can hit Europe but not the USA. Stoltenberg himself, referring to the SSC-8’s that Russia had deployed on its own territory, declared that they are capable of reaching most of Europe, but not the United States. This is how the United States defends Europe.

And in this grotesque affirmation by Stoltenberg, who attributes to Russia “the highly perilous idea of limited nuclear conflict”, he warns:

“All atomic weapons are dangerous, but those which can lower the threshold for use are especially so”.

This is exactly the warning sounded by US military and scientific experts about the B61-12’s which are on the verge of being deployed in Europe:

“Low-powered, more accurate nuclear weapons increase the temptation of using them, even to using them first instead of as a retaliation”.

Why is the Corriere della Sera not going to interview them?
