

Ophthalmologists Now Ethically Obligated to Denounce COVID-19 Vaccines, as 20,000 New Eye Disorders Are Reported

The covid vaccine holocaust is destroying people's hearing and vision

Ongoing processor vaccine related eye disorders first reported two year ago in May 2021

First published on May 6, 2021

In just a few months, the World Health Organization received approximately [20,000 reports of new eye disorders](#) that occurred post covid-19 vaccination. These reports include 303 cases of blindness and 1,625 cases of visual impairment! The European drug monitoring agency had never recorded such a severe spike in eye injuries until after the experimental vaccines were launched. These reports were collected by VigiBase and analyzed by the Uppsala Monitoring Centre in Uppsala, Sweden.

About half of the new eye disorders were additionally reported to the U.K.'s Yellow Card adverse event reporting system, which was set up to monitor the influx of adverse events that were anticipated during this live, experimental vaccine study. Back in 2020, the vaccine makers had already entered into liability-free contracts with governments around the world. This has enabled mass vaccine injury with no recourse or accountability and set up the framework for a historic, worldwide holocaust.

Ophthalmologists need more training to properly recognize and report vaccine injury

These experimental vaccines are designed to cause inflammation throughout the body, by reprogramming human cells to produce inflammatory spike proteins that are derived from the bio-weapon itself. Eye damage is merely a symptom of this inflammation, a sign of more serious problems to come with capillaries and autoimmune issues. The inflammatory conditions caused by the vaccines provide a new revenue stream for various industries within the medical system, including ophthalmology.

With mounting evidence of eye injury post-vaccination, ophthalmologists are ethically obligated to [denounce these covid-19 vaccines](#). The vaccines are causing acute eye injuries

at scale and are an underlying cause of inflammation for future eye disorders and other health problems. However, ophthalmologists are not properly trained to recognize, diagnose and report vaccine injury.

When the U.S. FDA issued Emergency Use Authorization for these experimental ‘vaccines’, they did not mention eye disorders specifically. [In their fact sheet](#), they warn, “additional adverse reactions, some of which may be serious, may become apparent with more widespread use of the Pfizer-BioNTech COVID-19 Vaccine.”

In the UK’s Yellow Card System, vaccine-induced eye damage includes 4,616 cases of severe eye pain, 3,839 cases of blurred vision, 1,808 cases of light intolerance, and 559 cases of double vision. These issues were not prevalent until the vaccine was used. Some of the eye issues are mild but could be a sign of more serious issues within the cardiovascular or nervous systems. There were 768 cases of eye irritation, 731 cases of itchy eyes, 788 cases of ocular hyperemia, 459 cases of eye strain, 400 cases of dry eye, and 653 cases of increased lacrimation.

The covid vaccine holocaust is destroying people’s hearing and vision

More serious issues of swelling were documented as well, including swelling around the eye (366 incidences), swelling of the eyelid (360 incidences) eyelid oedema (298) conjunctival haemorrhage or breakage of a small eye vessel (236), periorbital oedema (171), and eye haemorrhage (169). The swelling can be indicative of more serious cerebral, spinal, and/or cardiovascular issues. Blood clots and nervous system disorders are a commonly reported adverse event. The eye disorders provide a window of opportunity to understand just how severe the inflammation is. Ophthalmologists are able to identify early signs of vaccine-induced brain swelling, cardiovascular issues and stroke to help patients seek emergency care before the patient becomes another casualty to these horrid vaccines.

One 33-year-old pilot had severe migraines and sudden vision problems following the Pfizer vaccine. The pain migrated down the back of his neck toward the bottom of his skull. The pain lasted for several days and was accompanied by dizziness, nausea, disorientation, confusion, uncontrollable shaking, and tingling in his toes and fingers. He was ultimately evaluated by doctors. The Pfizer COVID vaccine had increased the pressure in his spinal cord and brain stem, rupturing his left inner ear, and damaging his eyesight.
