

Pandemic Vaccination - Why You Should Be Concerned

As the summer of 2009 winds down, the debate over “pandemic” vaccinations in the nation’s “public” schools is beginning to ramp up.

According to the Associated Press, hundreds of public schools are “heeding the government’s call to set up flu clinics in the fall, preparing for what could be the most WIDESPREAD SCHOOL VACCINATIONS since the days of polio.”

Yet, despite all of the “hype” and fear-mongering, a few very important questions remain unanswered, and concerned citizens are still being left in the dark. Some basic questions should be very simple ones for Washington to answer. Who is paying for these millions of experimental vaccines? Is this yet another government “bailout program” this time to enrich Big Pharma?

The single biggest question that this writer personally asked of HHS Secretary Sebelius two months ago in an “open letter” is simply: “WHAT ARE THE INGREDIENTS OF THE VACCINES?” Can Americans be 100% guaranteed that toxic squalene (an oil-in-water adjuvant) and live viruses will not be part of the ingredient list, since on July 13, the World Health Organization approved these substances to be included in the vaccines?

Again, I would ask Ms. Sebelius: “Please give us an INDEPENDENT analysis of the contents of the various ‘vaccines’ before asking us to roll up our sleeves and take the shots ESPECIALLY our precious children.” All we are asking for, Secretary Sebelius, is INFORMED CONSENT; instead, you consistently appear to be demanding blind, robotic TRUST as you IGNORE these basic questions.

Typically, when someone is afraid to give full and honest disclosure, it is because they have something to hide. What is the government hiding?

I would respectfully remind Secretary Sebelius that her own FDA, as well as the FTC, is the watchdog over consumer products and their safety. Various Truth in Labeling laws provide for the COMPLETE and ACCURATE listing of product ingredients on the labels. Thanks to these laws, this author can receive full disclosure of the chemicals and preservatives in a bag of Cheetos, and thus, I can make an informed decision to purchase and consume the product or abstain from the same as the case may be. Nobody is forcing me, to buy and eat a bag of Cheetos. Yet, the CDC and the federal government’s “health and human services” division do not seem inclined to apply these same basic consumer-protection laws to the pandemic flu vaccines. Again one must ask, “Why is this?”

Furthermore, if my bag of Cheetos happens to have some toxic mold growing in the product, which makes me deadly ill — I have the basic right to sue the company for damages. Not so with these vaccines. Not only do we the people not know what specific chemicals and viruses are being shot directly into our bloodstreams, but again according to an Associated Press article, the vaccine companies have been given blanket immunity from lawsuits. This of course leads us to ask yet another question, “If the vaccines are so safe, why does Big Pharma need such sweeping lawsuit protections in place?”

THE EMEA PROVIDES DISCLOSURE

Over the weekend, a gentleman in Belgium sent a very interesting e-mail. He had finally succeeded in getting a document from the European Medicines Agency (EMA -the European Union’s equivalent of America’s FDA) that listed the basic ingredients in the primary “pandemic flu” vaccine being purchased for Europe GlaxoSmithKline’s (GSK) PANDEMRIX vaccine. This EMA Document is very, very revealing.

The vaccine consists of:

Active Substance: Pandemic influenza vaccine (H5N1) (split virion, inactivated, adjuvanted) A/VietNam/1194/2004 NIBRG-14.

Clearly, this is BIRD FLU vaccine, with the isolated antigen being the VietNam killer bird flu virus that has exhibited such a high mortality rate amongst victims in that country. The problem is, according to the WHO, the pandemic flu threatening Europe and the world is not a BIRD FLU (H5N1) virus at all, but is a “Novel” Swine Flu (H1N1) virus. How is it possible that such a specific BIRD FLU VACCINE would give any immune protection to a “Novel” Swine Flu “pandemic” virus?

It would seem that GSK is trying to unload stockpiles of its “Avian Pandemic Flu” vaccine by disguising it as a generic “Pandemic” vaccine under the name “PANDEMRIX”!! Why is the EMA allowing this to happen? Will the FDA follow the EMA’s lead and allow “Pandemrix” bird flu viruses to be shot into millions of school children in America? Or will it be only Novartis or Novavax vaccines allowed in America? When will Americans be given FULL DISCLOSURE OF THE LABELING, and the COMPANIES UNDER CONTRACT??

Notice also that GSK’s “Pandemrix” circular declares that the virus included in the vaccine has been “adjuvanted” but it doesn’t disclose the specific adjuvant used. It is very likely “oil-in-water” adjuvant, aka squalene but this is not fully disclosed.

A very real concern of virologists worldwide is that the relatively benign “Novel” Swine Pandemic Flu threatening the world today, could turn into a much more dangerous killer if it somehow were able to blend with a known high-morbidity-producing virus, such as the VietNam strain of H5N1. It would appear that injecting millions of people with PANDEMRIX “adjuvanted” H5N1 Bird Flu viruses could indeed create the ‘Perfect Storm’ as far as a pandemic is concerned.

This Organized Lunacy must end, and it must end Now!
