Because of the science-based concerns explained in a series of three Open Letters to Parents and Pediatricians (see links below), we urgently ask pediatricians around the world to call for an immediate halt to the global campaign to vaccinate children against COVID.

The three *Open Letters* are intended to help parents, grandparents, and physicians to better understand and appreciate the following:

- The human immune system is ingeniously complex, beautifully collaborative, extraordinarily competent, and precious.
- The interplay between the immune system and viruses involves complex and delicate adjustments (ongoing counter-moves) on the part of both the virus and the immune system—at both the individual level and the population level.
- Compared to the complex, comprehensive, multidimensional, collaborative approach used by the natural immune system (to protect us from infection), the COVID vaccines use a simplistic, unidimensional, exclusionary approach that sidelines and disrupts important components and functions of the immune system.
- The mass COVID vaccination campaign profoundly disturbs the immune ecosystem, with extremely worrisome short-term and long-term consequences—at both the individual level and the population level.
- In fact, the COVID mass vaccination campaign is responsible for abnormally

generating a prolonged series of dominating new variants that become increasingly infectious, increasingly vaccine-resistant (due to “immune escape”), and inevitably more virulent. This mass vaccination campaign has failed to appreciate the complexity and delicacy of the immune ecosystem and, thereby, has prolonged the COVID pandemic and made it much more dangerous.

- Children, in particular, must be protected from the harmful effects (at both the population level and the individual level) of the COVID mass vaccination campaign.
- When given to infants and toddlers, the COVID vaccines interfere with the foundational education of a child’s innate immune system. Our concern is that this interference will irreversibly render those children less able to handle not only SARS-CoV-2 but many other glycosylated viruses, and also predispose those children to autoimmune disease and malignancies.
- There is desperate need for a representative panel of international experts—comprised of exemplary virologists, immunologists, vaccinologists, evolutionary biologists, epidemiologists, and other relevant experts—to engage in respectful, healthy, inclusive, honest, objective, rigorously scientific, video-archived, public dialogue about the COVID mass vaccination campaign, particularly the mass vaccination of children. So far, such dialogue has not occurred.
- Since the WHO, CDC, FDA, NIH, AAP (American Academy of Pediatrics), pharmaceutical companies, conventional media, and most physicians have chosen not to engage in the above-mentioned dialogue and have failed to stop the misguided COVID mass vaccination of children—the activism of concerned, respectful, informed parents, grandparents, and pediatricians represents our best hope to bring about an immediate halt to the COVID vaccination of children, until proper scientific dialogue and thorough re-evaluation of the COVID vaccination campaign occur.

We would much prefer that the issues raised in the three Open Letters be addressed via healthy scientific dialogue, by an above-mentioned panel of exemplary experts. Unfortunately, proponents of the mass vaccination campaign have shown no interest or willingness to engage in such dialogue, despite repeated pleas by scientists and physicians who have challenged the scientific merits of the prevailing COVID narrative and its mass vaccination campaign.

In the absence of such dialogue, we call for an immediate halt to the mass COVID vaccination of children, until proper scientific dialogue and thorough re-evaluation of the COVID vaccination campaign has occurred. We urgently and strongly encourage pediatricians around the world to join us in that call for an immediate halt. It is our hope that the three Open Letters will stimulate, facilitate, and focus dialogue on the most profoundly important aspects of the COVID situation. We encourage proponents of the mass COVID vaccination campaign to review the information presented in the three Open Letters and respectfully challenge aspects with which they disagree. We welcome such challenge, for that is the purpose and the tradition of healthy scientific dialogue.

Please share this letter as widely as possible—with parents, friends, colleagues, and organizations.

Featured image: The drawing at the beginning of this document is by Kathe Kollwitz (1867-1945), a compassionate German artist who was deeply concerned about children, mothers, human suffering, poverty, injustice, and war. If she were with us today, Kathe would undoubtedly be deeply concerned about the mass COVID vaccination of children.
