

People ‘Should be Leery About’ a Coronavirus Vaccine

Ron Paul, in a Monday interview with host Dan Dicks at Press for Truth, warns that people “should be leery about” coronavirus vaccines that may come out. Further, says Paul, a doctor and former United States House of Representatives member, “right now I wouldn’t think there is any indication for anybody to take them,” noting that “scare tactics” are being used to pressure people into thinking they should take such potential vaccines to protect against coronavirus.

Paul supports this conclusion by stressing in the interview the potential danger of a vaccine as well as the overstated threat from coronavirus.

Regarding the potential danger from a coronavirus vaccine, Paul discusses at the beginning of the interview how, in 1976 in his first week as a House member, Paul was one of only two members, both doctors, who voted against legislation that helped rush through a vaccine in response to swine flu. Paul describes the results of the push for people to take the swine flu vaccine as follows:

They rushed the vaccine through. The vaccine was not properly made. It had nothing to do with the virus that was out there, so it saved nobody’s life from it. It caused a lot of harm. More people ended up dying from the inoculation than died from the flu that year. And that sort of was a lesson, like that’s a little bit too extreme. But, that’s about what happens when governments get involved and you do things for political reasons.

There was also, because a lot of people ended up getting the vaccine, I think there were like 50 people or more who got Guillain-Barré syndrome, which is temporary total paralysis and you can die from it but most of them did get better. But, it was a very, very serious complication of a viral injection, you know, a vaccine.

Paul also discusses in the interview the overstated danger from coronavirus that is being used to scare people to take actions including to potentially take a coronavirus vaccine.

Paul notes that many of the people whose deaths have been blamed on coronavirus are elderly people, including people living in nursing homes, who have multiple other diseases. Further, explains Paul, doctors have “been instructed by [the Centers for Disease Control and Prevention] and other politicians that, when the doctors sign the death certificate, if [patients] have four different things but they happen to have a positive test for the virus that is to be put down as the major cause of death.” “The numbers mean nothing,”

concludes Paul regarding the daily tabulation of coronavirus deaths.

In addition, Paul explains that many more people than officially recorded have contracted coronavirus. Some of these individuals never became sick. Others got better without any treatment, says Paul, pointing to his son Sen. Rand Paul (R-KY) as an example. While Rand Paul was given a test that confirmed he had coronavirus, most people who have had coronavirus and suffered no to minor medical problems have not been tested. With “probably millions of people” having contracted coronavirus, Paul concludes that the percentage of people who have contracted coronavirus and have died as a result “is probably very, very small.”

While Paul says he would choose not to take a vaccine for the coronavirus should one appear next week even if people claim it is 99 percent effective, he says that the decision to take or not take a vaccine is one that should be made by each individual, who can discuss the vaccine alternative with a doctor. Absolutely, Paul concludes, that decision should not be made by government.

Watch here Paul’s complete interview, in which he also discusses how government actions taken in the name of fighting coronavirus are harming the economy and his support for people speaking out for ending coronavirus-justified encroachments on freedom:
