

Pfizer Smoking-gun “Secret Document”: Their Deadly COVID Vaccine

By [Jon Rappoport](#)

After publishing this article, I discovered that the gigantic Pfizer list of medical conditions was apparently not a report on logged cases of adverse events, but instead a complete list of conditions that Pfizer would be monitoring, in order to see whether they popped up on their radar as reactions to the COVID vaccine.

Why would Pfizer publish this extraordinary list? Because as they state, these medical conditions have been associated with severe COVID-19 “and vaccines in general.” In other words, vaccines in general, historically, have carried enormous risk and dangers over an incredibly wide area of medical conditions. This is a key confession.

Further, if you read the full secret Pfizer document, you will come to Table 7, which does list a number of categories of adverse reactions, all of which WERE reported in the first three months of the Pfizer vaccine rollout. This IS stunning.

In the secret document, Pfizer does list 1,223 deaths occurring after just three months of the vaccine rollout. This should have been sufficient to cause a complete halt to the vaccination program.

Finally, Pfizer admits that in the first three months of the vaccine rollout, it logged a staggering 42,086 cases of adverse reactions. And as far as I can determine from the Pfizer document, these 42,086 cases represented a total of 139,888 adverse events. In other words, in many cases, there were reports of multiple adverse events.

*

Journalist Celia Farber just [wrote an explosive article](#) on the Pfizer secret document. You should read it (and her addendum, [here](#)). She deserves our thanks and gratitude. And here you can also [read the document itself](#).

In short, the Pfizer document (which was never supposed to see the light of day but was

disclosed as part of a FOIA suit) describes the adverse effects from just the first three months of injections with the company's COVID vaccine:

158,000 adverse events, 1,223 deaths. In a half-sane world, this would have been more than enough to halt all injections and cancel the vaccine.

I've queried two attorneys. They both looked at the Pfizer document and state they believe it's authentic.

The appendix of the Pfizer document is the most astonishing section. It's beyond astonishing. It lists all the types of vaccine adverse events Pfizer logged—again, in just three months of injections.

Page after page after page after page of types of adverse events. Each type of event cast in medical language, the language of the dead. The proponents of this technical-ese speak, as it were, from beyond the grave. They're super-educated brainwashed zombies. It's as if they're listing and counting abstractions in an academic board game.

The abstractions raise no concerns. In the document, no one is waving red flags. They're all medical bean counters, keeping their books with precision.

Make no mistake, these are the people who are operating the levers of society on a day-to-day basis, maiming and killing with a confident attitude that indicates they are beyond reproach. The very notion of reproach is foreign to them.

Civilization is drowning. It's drowning in a giant lake of TECHNIQUE. The uses to which technique is put have become irrelevant. Just follow procedure. Carry out assigned tasks. Pass along information. Report on results. And then you will have achieved immunity from blame.

Or resist and rebel no matter what. These are the stakes. This is the war.

Get ready. Buckle up. Logged by Pfizer, covering the first three months of COVID vaccination, here is the corporation's list of types of vaccine adverse events, as published by Celia Farber.

BNT162b2

5.3.6 Cumulative Analysis of Post-authorization Adverse Event Reports

APPENDIX 1. LIST OF ADVERSE EVENTS OF SPECIAL INTEREST

1p36 deletion syndrome; 2-Hydroxyglutaric aciduria; 5'nucleotidase increased; Acoustic neuritis; Acquired C1 inhibitor deficiency; Acquired epidermolysis bullosa; Acquired epileptic aphasia; Acute cutaneous lupus erythematosus; Acute disseminated encephalomyelitis; Acute encephalitis with refractory, repetitive partial seizures; Acute febrile neutrophilic dermatosis; Acute flaccid myelitis; Acute haemorrhagic leukoencephalitis; Acute haemorrhagic oedema of infancy; Acute kidney injury; Acute macular outer retinopathy; Acute motor axonal neuropathy; Acute motor-sensory axonal neuropathy; Acute myocardial infarction; Acute respiratory distress syndrome [Note by Celia Farber: "that sounds like

'Covid 19'.']; Acute respiratory failure; Addison's disease; Administration site thrombosis; Administration site vasculitis; Adrenal thrombosis; Adverse event following immunisation; Ageusia; Agranulocytosis; Air embolism; Alanine aminotransferase abnormal; Alanine aminotransferase increased; Alcoholic seizure; Allergic bronchopulmonary mycosis; Allergic oedema; Alloimmune hepatitis; Alopecia areata; Alpers disease; Alveolar proteinosis; Ammonia abnormal; Ammonia increased; Amniotic cavity infection; Amygdalohippocampectomy; Amyloid arthropathy; Amyloidosis; Amyloidosis senile; Anaphylactic reaction; Anaphylactic shock; Anaphylactic transfusion reaction; Anaphylactoid reaction; Anaphylactoid shock; Anaphylactoid syndrome of pregnancy; Angioedema; Angiopathic neuropathy; Ankylosing spondylitis; Anosmia; Antiacetylcholine receptor antibody positive; Anti-actin antibody positive; Anti-aquaporin-4 antibody positive; Anti-basal ganglia antibody positive; Anti-cyclic citrullinated peptide antibody positive; Anti-epithelial antibody positive; Anti-erythrocyte antibody positive; Anti-exosome complex antibody positive; Anti-GAD antibody negative; Anti-GAD antibody positive; Anti-ganglioside antibody positive; Antigliadin antibody positive; Anti-glomerular basement membrane antibody positive; Anti-glomerular basement membrane disease; Anti-glycyl-tRNA synthetase antibody positive; Anti-HLA antibody test positive; Anti-IA2 antibody positive; Anti-insulin antibody increased; Anti-insulin antibody positive; Anti-insulin receptor antibody increased; Anti-insulin receptor antibody positive; Anti-interferon antibody negative; Anti-interferon antibody positive; Anti-islet cell antibody positive; Antimitochondrial antibody positive; Anti-muscle specific kinase antibody positive; Anti-myelin-associated glycoprotein antibodies positive; Anti-myelin-associated glycoprotein associated polyneuropathy; Antimyocardial antibody positive; Anti-neuronal antibody positive; Antineutrophil cytoplasmic antibody increased; Antineutrophil cytoplasmic antibody positive; Anti-neutrophil cytoplasmic antibody positive vasculitis; Anti-NMDA antibody positive; Antinuclear antibody increased; Antinuclear antibody positive; Antiphospholipid antibodies positive; Antiphospholipid syndrome; Anti-platelet antibody positive; Anti-prothrombin antibody positive; Antiribosomal P antibody positive; Anti-RNA polymerase III antibody positive; Anti-saccharomyces cerevisiae antibody test positive; Anti-sperm antibody positive; Anti-SRP antibody positive; Antisynthetase syndrome; Anti-thyroid antibody positive; Anti-transglutaminase antibody increased; Anti-VGCC antibody positive; Anti-VGKC antibody positive; Anti-vimentin antibody positive; Antiviral prophylaxis; Antiviral treatment; Anti-zinc transporter 8 antibody positive; Aortic embolus; Aortic thrombosis; Aortitis; Aplasia pure red cell; Aplastic anaemia; Application site thrombosis; Application site vasculitis; Arrhythmia; Arterial bypass occlusion; Arterial bypass thrombosis; Arterial thrombosis; Arteriovenous fistula thrombosis; Arteriovenous graft site stenosis; Arteriovenous graft thrombosis; Arteritis; Arteritis
