

Politicians Have No Right Demanding ‘Vaccine Passports’ When the Vaccines Themselves Are Fraught with Risk

We must choose between signing up to a lifetime of imperfect shots or remain sort of social pariahs for the rest of our lives, Robert Bridge writes.

If it were possible to say with absolute scientific authority that vaccinations are the best way for the planet to escape from the Covid-19 death grip, then it might seem plausible – albeit still highly arguable – for governments to demand proof of ‘the mark’ for participating in the global economy. As things stand, however, nothing to date indicates that there are not more effective and reliable means of moving forward.

The relentless push for vaccine passports by opportunistic authoritarians around the globe took a broadside this week as Israeli researchers discovered what had been suspected by many all along: natural immunity acquired via infection, as opposed to vaccinations, provides the best defense against Covid-19 and its seemingly endless array of Greek-coded variants.

The [study](#), which examined up to 32,000 individuals, found that the risk of developing Covid-19 was 27 times higher among the vaccinated (with the Pfizer and BioNTech vaccine), and the risk of hospitalization eight times higher, as compared to those individuals who had acquired natural immunity.

Equally shocking, individuals who were administered two doses of the Pfizer-BioNTech vaccine were almost six-times more likely to contract the Delta variation and seven-times more likely to have symptomatic disease than those who recovered from the disease naturally, according to the study, which is up for peer review.

“This analysis demonstrated that natural immunity affords longer lasting and stronger protection against infection, symptomatic disease and hospitalization due to the delta variant,” the researchers said.

So what grounds are left for forcing vaccine passports on people? The simple answer would

seem 'none.' As a thought experiment, let's imagine that a radical new mode of transportation still in the early test stages – perhaps some brainchild from the quirky mind of Elon Musk, for example – had proven to have a better than average chance of exploding for no apparent reason.

Under such grim conditions it is doubtful that governments would coerce their subjects into driving such a flawed vehicle since the product itself would be deemed too dangerous to enter the mainstream. So why isn't the same sort of logic being employed when it comes to being forced to carry a vaccine passport for a vaccine, which has also demonstrated itself to be dodgy at best, disastrous at worst?

The efficacy of the Pfizer vaccine in treating the Delta strain has been measured at just [42 percent](#), and in some cases even as low as [17 percent](#). At the same time, thousands of otherwise healthy people have suffered horrible side effects after taking these jabs, up to and including death.

Australian journalist Denham Hitchcock is one of thousands of people who got [much more](#) than he bargained for when he got the shot.

"The first week was like any vaccine. Feeling off," Hitchcock wrote on his Instagram page.

"But nearing the end of the second week my heart started to race, I was getting pins and needles in the arms, extreme fatigue and a very strange sensation of dizziness...By the end of the third week i was getting steadily worse – sharp chest pain – cold shivers and chills – and the dizziness was intense.

"25 days after the shot and probably a little late to hospital – but here I am – diagnosed with pericarditis – or inflammation of the heart due to the Pfizer vaccine."

Since being in the hospital, Hitchcock says he's contacted health professionals in Sydney who told him that while his reaction to the vaccine is rare – it's certainly not isolated.

"One hospital has had well over a dozen cases like me," he revealed.

Meanwhile, a coroner this week has determined that the death of Lisa Shaw, who worked for BBC Radio Newcastle and passed away in May, was "due to complications of an AstraZeneca Covid vaccination."

And lest anyone think the Moderna vaccine is without its own problems, Japan this week removed around 1.6 million vials of the vaccine from use after contamination was reported by the Ministry of Health, Labor and Welfare. While such things do occasionally happen, the ministry revealed that the substance found in the vials "reacted to magnets and...could be metal."

Moderna suggested the problem may have come from a "manufacturing issue" from a plant in Spain.

"The company is investigating the reports and remains committed to working transparently and expeditiously with its partner, Takeda, and regulators to address any potential concerns," a Moderna spokesperson [told](#) Nikkei, saying the drugmaker believed a "manufacturing issue" at a plant in Spain was to blame.

Incidentally, the very inventor of the mRNA vaccines, Dr. Robert Malone, who could be providing governments much-needed guidance during the pandemic, has largely been shunned from polite society from the Western hemisphere's very own medical Taliban as a conspiracy theorist who peddles in "misinformation."

When we finally get past all of this, the legitimacy of both the federal public health infrastructure and the legacy media will have been destroyed. And what happens then? Force your mind to think 9-12 months ahead. What do things look like then, based on current trends?

— Robert W Malone, MD (@RWMaloneMD) [August 27, 2021](#)

Getting back to Pfizer, its own lackluster performance apparently means little to regulators as the drug maker just [won approval](#) by the Food & Drug Administration (FDA) to administer its vaccine, which will be distributed under the brand name Comirnaty. Now pressure will certainly ratchet up against those who have second thoughts about the magic juice as many public and private institutions – from schools and workplaces to government agencies – push for a mandatory vaccine regime. This would include society's youngest and most vulnerable demographic, the children.

British Prime Minister Boris Johnson, for example, is pressuring the National Health Service to begin vaccinating children as young as 12, and despite the fact that the youth have shown amazing imperviousness to the virus. The UK looks set to join the United States, Spain, France and Germany as countries where inoculating the young is quickly becoming standard operating procedure – and with zero democratic debate.

Nobody, however, should be led to believe that things will return to normal once everyone has rolled up their sleeves for the shot. After all, these 'vaccines' do not prevent people from getting infected by Covid, and, as studies have shown, may actually precipitate infection. This shocking shortcoming of the jabs, far from sidelining their use in favor of other preventive measures, has allowed the vaccine makers to roll out an endless supply of booster shots, as gleefully discussed at a recent Pfizer stockholder meeting.

Albert Bourla, Pfizer Chairman of the Board & CEO, [remarked](#) that "the dynamics in the COVID more and more indicate a potential that we will have a clearly repeated business...Now we still don't have data about the immunity of our vaccine because it is early. But we do see that the people that have the disease, more and more publications indicate that after several months, the immune response goes down. So there is a need to boost." Those giddy remarks were made back in February, before the Pfizer vaccine has acquired FDA approval.

In other words, the sky is the limit for Big Pharma as far as profits from vaccinations go. And despite the inherent risks of getting the jab, the Western world's assembly of petty tyrants, short-sighted leaders like French President [Emmanuel Macron](#), Canadian Prime Minister [Justin Trudeau](#) and U.S. President [Joe Biden](#) are pushing ahead with plans for vaccine passports.

Such an initiative, which flies in the face of freedom and liberty, denies individuals the right to refuse medical treatment – and treatment that is loaded with unacceptable risk. And just because one of the drug makers has secured FDA approval for their product, this will not

help individuals who are injured, or worse, from the vaccines. The drug makers are indemnified from any lawsuits that may arise from the victims of their product.

This dire situation has placed the citizens of so-called democracies into the unenviable situation where they must choose between signing up to a lifetime of imperfect shots and boosters to participate in a large swath of the economy, or remain something of a social pariah for the rest of their lives. It is a choice that no citizen of a democratic system should ever be forced to make.
