One of the ways the global cabal is attempting to implement The Great Reset and the Fourth Industrial Revolution is by putting global supply chains at risk to bring the economy to its knees. I warned about this looming threat in my article [What the Future Portends: 10 Predictions for 2021 and Beyond](#).

The narrative being sold to the public goes like this. The new wave of COVID-19 infections caused by various Greek-letter variants, major disruptions due to natural disasters (attributed to climate change), and cyber-attacks targeting key industries are causing worker shortages and the inability for ships and other major transport systems to reach their destinations. This "shortage" of workers and goods such as food and computer chips plays right into globalist stooges hands. As prices skyrocket, the economy will further deteriorate and panic will rule the day. People desperate for basic necessities will turn to looting and violence which will give governments a new excuse to lockdown and subdue their populations.

The true narrative points to global forces using these unfolding calamities as the perfect convergence of manufactured "problem-reaction-solution" scenarios. These "existential" crises are deliberately put in motion to move the world towards global governance based on the UN (Agenda 2030) Sustainable Development goals, a new blockchain based financial system, and a China-like surveillance state.

Pandemics, climate change, cyber terror, and manufactured supply shortages are trojan horses used to remove individual rights, destroy nations and governments, and push people into a new technocratic society. All of these events allow governments to implement "emergency" measures while consolidating more power. As these scenarios play out, control mechanisms such as biometric surveillance, smart technology, social credit, Universal Basic Income, mandatory vaccination, and digital ID/wallet systems are steadily materializing.

A new article in the [Insurance Journal](#) provides details to the changes rapidly taking place as the global supply chain is threatened. The article states:

Events have conspired to drive global supply chains towards breaking point, threatening

the fragile flow of raw materials, parts and consumer goods, according to companies, economists and shipping specialists.

The Delta variant of the coronavirus has devastated parts of Asia and prompted many nations to cut off land access for sailors. That's left captains unable to rotate weary crews and about 100,000 seafarers stranded at sea beyond their stints in a flashback to 2020 and the height of lockdowns.

Meanwhile, deadly floods in economic giants China and Germany have further ruptured global supply lines that had yet to recover from the first wave of the pandemic, compromising trillions of dollars of economic activity that rely on them.

Manufacturing industries are reeling.

Automakers, for example, are again being forced to stop production because of disruptions caused by COVID-19 outbreaks. Toyota Motor Corp said this week it had to halt operations at plants in Thailand and Japan because they couldn't get parts.

Buckling supply chains are hitting the United States and China, the world's economic motors that together account for more 40% of global economic output. This could lead to a slowdown in the global economy, along with rising prices for all manner of goods and raw materials.

Ports across the globe are suffering the kinds of logjams not seen in decades, according to industry players.

The China Port and Harbour Association said on Wednesday that freight capacity continued to be tight.

A cyber attack hit [South African container ports](#) in Cape Town and Durban this week, adding further disruptions at the terminals.

If all that were not enough, in Britain the official health app has told hundreds of thousands of workers to isolate following contact with someone with COVID-19 — leading to supermarkets warning of a short supply and some petrol stations closing.

Richard Walker, managing director of supermarket group Iceland Foods, turned to Twitter to urge people not to panic buy.

"We need to be able to supply stores, stock shelves and deliver food," he wrote.

Another recent article from [The Conversation](#) details how extensive the shortages are, stating:

It expands to include a whole range of products like [lumber and other building materials, tools, foodstuffs, seeds, furniture, cleaning supplies, aluminum cans, jars, pools and pool equipment, chemicals, bicycles, camping gear, household appliances and replacement parts of all kinds](#).

In many cases supply chains have been simultaneously squeezed on both ends — supply and demand.

The empty store shelves that dotted the landscape at the beginning of last year's pandemic is only a taste of what is to come. [Manufactured famine](#) would be the perfect way to introduce complete control of the food supply. The ultimate goal is to eliminate meat-eating and increase consumption of [GMO crops](#) and [synthetic food](#) as only a few major corporations would control the entire world's food supply. This is why Bill Gates is now the [largest landowner in the U.S.](#)

Recently there have already been major "cyber attacks" by mysterious hacker groups on a major U.S. gasoline pipeline ([Colonial](#)) and global food supplier ([JBS](#)). The power grid failure in Texas this past February created shortages of water, food, and heat for short periods, but caused much devastation and even death. In March, a container ship blocked both lanes of the Suez Canal and kept vessels from crossing for an entire week leading to inflated oil prices and long shipping delays. Current [drought conditions in the western United States](#) exacerbated by wildfires and extreme high temperatures are ruining vegetation and impacting the water supply.

These events along with a "cyber pandemic" could easily trigger a worldwide crisis. World Economic Forum frontman and globalist stooge Klaus Schwab has warned of an event to come that could make the coronavirus "pandemic" seem like a small disturbance. The World Economic Forum sponsored [Cyber Polygon](#) events have been creating simulations of massive cyber-attacks that could completely disrupt finance, global trade, power grids, and life as we know it. Will these simulations go live in the near future?

If you're reading this you are ahead of the curve as most people are still marching along like sheep to the slaughter. But don't wait! Take action now and stock up on needed goods and supplies before it is too late. Discuss these scenarios with your loved ones and formulate a plan that can help you stay above water if and when calamity strikes.
