In-depth Report: [THE H1N1 SWINE FLU PANDEMIC](#)

Time Magazine's coverage of the swine flu scare has a noticeable subplot – preparing Americans for draconian measures to combat a future pandemic as well as forcing them to accept the idea of mandatory vaccinations.

In an article entitled [How to Deal with Swine Flu: Heeding the Mistakes of 1976](#), the piece discusses how dozens died and hundreds were injured from vaccines as a result of the 1976 swine flu fiasco, when the Ford administration attempted to use the infection of soldiers at Fort Dix as a pretext for a mass vaccination of the entire country.

Despite acknowledging that the 1976 farce was an example of “how not to handle a flu outbreak,” the article still introduces the notion that officials “may soon have to consider whether to institute draconian measures to combat the disease.”

Later we discover exactly what this will entail, namely “when to institute mass vaccination programs,” according to Howard Markel, director of the Center for the History of Medicine at the University of Michigan and a historical consultant to the CDC on flu pandemics.

Markel notes that the less politically combustible situation in America today compared to the post-Watergate era of Ford would make such draconian measures more achievable.

“Even so, he says, citizens still need to trust that the government is working for the greater good,” adds the article. “The American public has to be forgiving and patient and do [their] part too,” according to Markel.

Americans would indeed have to be very trustworthy and ultimately forgiving in taking a vaccine by government decree manufactured by a company that was been caught red-handed contaminating their vaccines with far deadlier viruses than swine flu.

[As we reported yesterday](#), Baxter International confirmed over the weekend that it is working with the World Health Organization on a potential vaccine to curb the deadly swine flu virus that is blamed for scores of deaths in Mexico and has emerged as a threat in the U.S., reports the Chicago Tribune.

As reported by multiple sources last month, including the [Times of India](#), vaccines contaminated with deadly live H5N1 avian flu virus were distributed to 18 countries last December by a lab at an Austrian branch of Baxter.

Since the probability of mixing a live virus biological weapon with vaccine material by accident is [virtually impossible](#), this leaves no other explanation than that the contamination

was a deliberate attempt to weaponize the H5N1 virus to its most potent extreme and distribute it via conventional flu vaccines to the population who would then infect others to a devastating degree as the disease went airborne.

These are the people we are supposed to “trust” and “forgive” according to Time Magazine and Markel when the federal government breaks down our door, guns drawn and dripping needle in hand.
