Global Research Editor's Note

The records of the Stop 5G Global Appeal indicate that Poland's Kancelaria Prezesa Rady Ministrów (Chancellery of the Council of Ministers), which is chaired by Prime Minister Mateusz Morawiecki has "signed" the appeal under the [Category "Organizations", scroll down to Poland.](#) (see screenshot below)

There has, however, been no official confirmation from the Polish government of this historic decision.

And there has been no coverage of the issue by the mainstream media.

The Prime Minister's alleged endorsement of the Appeal is on behalf of the Chancellery of the Council of Ministers. Was this entry undertaken by the Chancellery of the Council of Ministers? Has this "entry" on the Stop 5G Appeal been verified. Did the Chancellery confirm?

There is no record of a decision pertaining to 5G on [the home page of the Chancellery of the Council of Ministers.](#)

A recent report by the Polish media suggests that the Warsaw government (in the context of the dispute with China's Huawei) intends to approach the 5G issue in a coordinated fashion "across the EU" rather than at the level of individual EU member countries.

In December, according to [PRNewswire](#) (December 18, 2018),

"T-Mobile Polska launched [in December 2018] the first fully functional fifth generation mobile network in Poland – its coverage is currently available in the centre of Warsaw. T-Mobile commits itself to investing in and continuing development of the 5G network in the coming months and years, extending it to more locations and cities so it ultimately covers the entire country?"

This initiative was approved by the Polish government. On December 7, 2018, representatives of T-Mobile Polska, Deutsche Telekom and the Digital Affairs Minister Marek Zagórski inaugurated the launch of Poland's first fully functional 5G network.

Author Julian Rose (text below) concurs: the Prime Minister's (alleged) endorsement of the

Stop 5G Appeal is contradictory:

“.. That would be extraordinary because Morawiecki is due to lead his government in a major parliamentary act [mid June] in which the existing ‘accepted emissions/frequencies’ will be superceded by new 5G frequencies to enable the roll-out of 5G across the length and breadth of Poland”.

The project to be considered in the Polish parliament is no doubt pursuant to the TD-Polska, Deutsche Telecom, Ministry of Digital Affairs agreement signed in Warsaw on December 7, 2018

UPDATES:

Global Research has requested clarification from the organizers of The International Appeal to Stop 5G. Did they verify the matter, did they contact the Prime Minister’s office?

This is their response (June 10, 21.30pm ET) which contradicts the Polish government’s commitment to 5G telecommunication as outlined in December 2018:

The [International Appeal to Stop 5G on Earth and in Space](#) welcomes the good sense of Polish Prime Minister Mateusz Morawiecki in rejecting the fifth generation of wireless technology, 5G, by becoming a signatory to the Appeal.

The Appeal is a scientific and legal document that comprehensively sets out the case against 5G, which poses an existential threat to life on Earth. The people of Poland will doubtless be greatly relieved to learn that the Prime Minister supports protecting the health and natural environment of the Polish people.

Prime Minister Morawiecki joins the ranks of the numerous other concerned lawmakers who have rejected 5G: the Swiss cantons of [Vaud, Jura and Geneva](#), which adopted moratoria, and Neuchâtel, Bern, St Gallen and Schwyz, which [are considering doing so](#). The [Swiss](#) and [Netherlands](#) governments, as well as the [US state of New Hampshire](#), have demanded reports on the safety of 5G before going ahead. Lawmakers in Rome and Florence, and those of at least [21 US cities](#) have already rejected 5G, while the [Belgian Environment Minister](#) prohibited the 5G pilot project in Brussels, declaring that citizens were not “guinea pigs”.

The 5G issue in Poland remains uncertain. What is the position of the Polish government?

It is important that people in Poland and more generally in the European Union forcefully oppose the introduction of 5G wireless technology.

In what is surely an unprecedented and groundbreaking action, the Prime Minister of Poland, Mateusz Morawiecki, has backed [in the name of the Chancellery of the Council of ministers] an International Appeal to stop the controversial roll-out of 5G electro magnetic microwave telecommunication transmissions.

5G, a new millimetre band frequency range being introduced by the telecommunications industry worldwide, has been identified by over 2,000 scientists and 1,400 medical doctors from all over the world, as presenting a direct threat to human health, as well as to animal, insect and plant life.

There have been no safety tests carried out to ensure its safety, in spite of the fact that 5G operates at between 10 and 100 times higher frequencies than current 3 and 4G cell phone

tower transmitters.

The roll-out of 5G will involve the placement of millions of transmitter boxes at distances of no more than 10 to 12 houses apart in urban areas. Scientists have established that this will subject citizens living in urban areas to an unavoidable barrage of electromagnetic pollution.

A 2017 report by more than 230 scientists and doctors from 41 countries express serious concerns about steadily expanding exposure to Electro Magnet Frequencies (EMF). They state that even before the roll-out of 5G "Numerous recent scientific publications have shown that EMF affects living organisms at levels well below most national and international guidelines." *

These effects include cancer risk, cellular stress, increase in harmful free radicals, genetic damages, structural and functional changes to the human reproductive system, learning and memory defects, neurological disorders and negative impacts on general well-being in humans. Damage goes well beyond humans, as there is mounting evidence of deleterious effects to both plants and animals.

In Poland, the public are being used as guinea pigs in a 5G experiment to test the efficacy of the technology. The following cities are being used in the trial: Warsaw, Lodz, Gliwice.

The same procedure is taking place all over Europe, North America and many other countries.

The World's largest study 'National Toxicology Program' (NTP) revealed significant increases in the incidence of heart and brain cancer in animals exposed to EMF below the International Commission on Non Ionising Radiation Protection (ICNIRP) guidelines that are followed by most countries.

[Yet to be confirmed] The Prime Minister of Poland has taken a highly responsible step in signing the Global Appeal to Ban 5G in Earth and in Space.

He has opened the way for leaders in other countries to take the same step, thereby protecting their citizens from a potentially highly dangerous and untested technology whose repercussions for health and welfare are without precedent.
