

Proxy War Between America and Russia: Pentagon Supplying ISIS Terrorists in Syria with Aircraft Downing Weapons

To be Used against Russian Warplanes?

Region: [Middle East & North Africa](#)

Theme: [Military and WMD](#), [US NATO War Agenda](#)

In-depth Report: [SYRIA](#)

On November 4, the [Wall Street Journal](#) headlined “US, Allies to Boost Aid to Syria Rebels” – aka ISIS and other takfiri terrorists, US proxy foot soldiers, imperial death squads, no so-called “moderates” among them.

The Journal stopped short of explaining it, instead saying “(s)hipments of arms (and) supplies are aimed at pressuring Assad while countering Russia (and) Iran.”

According to the Journal, increased weapons shipments to anti-Assad elements aim to “challenge the intervention of Russia and Iran on behalf of Syrian President Bashar al-Assad, US officials and their counterparts (from Saudi Arabia, Qatar and other Gulf States) in the region said.

Obama declared proxy war on Russia after pledging to avoid it. He’s playing with fire. The more heavily armed ISIS and other takfiris become, the harder Russian aircraft will likely target them.

According to the Journal, “(i)n the past month of intensifying Russian airstrikes, the CIA and its partners have increased the flow of military supplies to rebels in northern Syria, including of US-made TOW antitank missiles, these officials said.”

Those supplies will continue to increase in coming weeks, replenishing stocks depleted by the regime’s expanded military offensive. An Obama administration official said the military pressure is needed to push Mr. Assad from power.

Shoulder-launched, man-portable, surface-to-air missiles (SAMS) defense systems (Manpads) are being supplied. “Those weapons could help target regime aircraft...and could also help keep Russian air power at bay,” said the Journal, citing unnamed US officials.

Manpads are relatively inexpensive, easy to operate and able to down low-flying aircraft. Helicopters are most vulnerable. So are fixed-wing planes during takeoffs, landings, and when operating at low altitudes.

Military aircraft systems alert pilots when missiles target them. Countermeasures to avoid

being struck include evasive action, infrared flares and lasers.

Russian planes are safe at high altitudes. Special precautions are taken to protect them during takeoffs and landings.

So far, Putin outwitted Obama in Syria, effectively challenging his dirty game. He's determined to eliminate the scourge of terrorism and keep it from spreading, especially to Central Asia and Russia.

A proxy state of war between America and Russia now exists – a hugely dangerous situation, risking possible direct confrontation between the world's two nuclear superpowers.

Expect Putin to go all-out to avoid it. Put nothing past neocon lunatics in Washington – willing to risk destroying planet earth to own it.
