Last week we [warned](#) readers to be cautious about new COVID-19 vaccines, highlighting how key parts of the clinical trials are being skipped as big pharma will not be held accountable for adverse side effects for administering the experimental drugs.

A senior executive from AstraZeneca, Britain's second-largest drugmaker, told [Reuters](#) that his company was just granted protection from all legal action if the company's vaccine led to damaging side effects.

"This is a unique situation where we as a company simply cannot take the risk if in ... four years the vaccine is showing side effects," said Ruud Dobber, a top exec at AstraZeneca.

"In the contracts we have in place, we are asking for indemnification. For most countries, it is acceptable to take that risk on their shoulders because it is in their national interest," said Dobber, adding that Astra and regulators were making safety and tolerability a top priority.

AstraZeneca is one of the 25 pharmaceutical companies across the world, testing experimental drugs that could be used to combat the deadly virus. And, of course, if testing yields positive results, AstraZeneca could manufacture hundreds of millions of doses, with no legal recourse if side effects are seen.

European officials told Reuters that product liability was a significant discussion to secure new vaccine drugs from Pfizer, Sanofi, and Johnson & Johnson.

As for the US, well, when it comes to the legal framework around vaccines, the US Food and Drug Administration (FDA) already has a law called the Public Readiness and Emergency Preparedness (PREP) Act, which provides immunity to vaccine companies if something goes wrong.

With AstraZeneca, and many US big pharma companies rushing COVID-19 vaccines to market with governments granting them immunity if the vaccine has side effects, all suggest corporate elites and government regulators have very little faith in these drugs.

For more color on leading vaccines in development that produce "severe" side effects, read our latest piece titled ["Moderna COVID-19 Vaccine Induced Adverse Reactions In "More Than Half" Of Trial Participants."](#)

Maybe these rushed vaccines are more for optics, get consumers back into airplanes, hotels,

resorts, and malls.

The major red flag is how governments are allowing big pharma to rush experimental vaccines, with no legal recourse if something goes terribly wrong.
