Sweden’s refusal to share information about the sabotage of the Nord Stream pipelines is “puzzling,” and withholding the results of the investigation means that “Swedish authorities are hiding something,” Russia’s Foreign Ministry spokeswoman Maria Zakharova [said](#) on Thursday.

Traces of explosives were found near the sites of the explosions at the Nord Stream 1 and Nord Stream 2 gas pipelines in the Baltic Sea, Sweden said in November, noting that the incident is “[gross sabotage](#).”

Gas leaks in each of the Nord Stream 1 and 2 pipelines were [discovered](#) at the end of September from the infrastructure just outside Swedish and Danish territorial waters in the Baltic Sea.

An investigation launched by the Swedish authorities [concluded](#) that the leaks were the result of detonations, likely the result of “serious sabotage”.

Sweden, Denmark, and Germany are also jointly investigating the incident with the gas pipelines built to carry Russian gas to Germany via the Baltic Sea.

Nord Stream 2 was never put into operation after Germany axed the certification process following the Russian invasion of Ukraine. Russia, for its part, shut down Nord Stream 1 indefinitely in early September, claiming an inability to repair gas turbines because of the Western sanctions.

Today, Russia criticized Sweden’s refusal to share information about the findings of the investigation with Russia, and Zakharova said that “Russian experts in the course of an objective investigation may come to uncomfortable conclusions and, finally, reveal to the public the ugly truth about who committed these acts of sabotage and terrorist attacks,” as

carried by Russian news agency TASS.

“The hiding of facts is evidence of the obvious: the Swedish authorities are hiding something,” Zakharova added.

Last year, Russia [accused](#) the UK Navy of being involved in the explosions that put the Nord Stream 1 and 2 pipelines out of commission.
