The Manhattan-Rochester Coalition, research on the health effects of radioactive materials, and tests on vulnerable populations without consent in St. Louis, 1945-1970

by *Martino-Taylor, Lisa*, Ph.D., UNIVERSITY OF MISSOURI – COLUMBIA, 2011, 838 pages; 3515886

Abstract:

This piece analyzes a covert Manhattan Project spin-off organization referred to here as the Manhattan-Rochester Coalition, and an obscure aerosol study in St. Louis, Missouri, conducted under contract by the U.S. military from 1953-1954, and 1963-1965. The military-sponsored studies targeted a segregated, high-density urban area, where low-income persons of color predominantly resided. Examination of the Manhattan-Rochester Coalition and the St. Louis aerosol studies, reveal their connections to each other, and to a much larger military project that secretly tested humans, both alive and deceased, in an effort to understand the effects of weaponized radiation. Through this case study, the author explores how a large number of participants inside an organization will willingly participate in organizational acts that are harmful to others, and how large numbers of outsiders, who may or may not be victims of organizational activities, are unable to determine illegal or harmful activity by an organization. The author explains how ethical and observational lapses are engineered by the organization through several specific mechanisms, in an effort to disable critical analysis, and prevent both internal and external dissent of harmful organizational actions. Through studying the process of complex organizational deviance, we can develop public policies that protect the public's right to know, and construct checks and methods to minimize the chance of covert projects that are contrary to societal norms.
