

The Confiscation of Bank Savings to “Save the Banks”: The Diabolical Bank “Bail-In” Proposal

The Crisis in Greece: Will it result in a Haircut “Bail-in” as applied in 2013 in Cyprus?

This article was first published by Global Research in April 2013.

* * *

Is the Cyprus Bank “Bail-in” a “dress rehearsal” for things to come?

Is a “Savings Heist” in the European Union and North America envisaged which could result in the outright confiscation of bank deposits?

In Cyprus, the entire payments system has been disrupted leading to the demise of the real economy.

Pensions and wages are no longer paid. Purchasing power has collapsed.

The population is impoverished.

Small and medium sized enterprises are spearheaded into bankruptcy.

Cyprus is a country with a population of one million.

What would happen if similar ‘hair cut’ procedures were to be applied in the U.S. or the

European Union?

According to the Washington based [Institute of International Finance](#) (IIF) (right) which represents the consensus of the global financial establishment, “the Cyprus approach of hitting depositors and creditors when banks fail, would likely become a model for dealing with collapses elsewhere in Europe.” ([Economic Times](#), March 27, 2013).

It should be understood that prior to the Cyprus onslaught, the confiscation of bank deposits

had been contemplated in several countries. Moreover, the powerful financial actors who triggered the bank crisis in Cyprus, are also the architects of the socially devastating austerity measures imposed in the European Union and North America.

Does Cyprus constitute a “model” or scenario?

Are there “lessons to be learned” by these powerful financial actors, to be applied elsewhere, at some later stage, in the Eurozone’s banking landscape?

According to the Institute of International Finance (IIF), “hitting depositors” could become the “new normal” of this diabolical project, serving the interests of the global financial conglomerates.

This new normal is endorsed by the IMF and the European Central Bank. According to the IIF which constitutes the banking elites mouthpiece, *“Investors would be well advised to see the outcome of Cyprus... as a reflection of how future stresses will be handled.”* (quoted in [Economic Times](#), March 27, 2013)

“Financial Cleansing”. Bail-ins in the US and Britain

What is at stake is a process of “financial cleansing” whereby the “too big to fail banks” in Europe and North America (e.g. Citi, JPMorgan Chase, Goldman Sachs, et al) displace and destroy lesser financial institutions, with a view to eventually taking over the entire “banking landscape”.

The underlying tendency at the national and global levels is towards the centralization and concentration of bank power, while leading to the dramatic slump of the real economy.

Bail ins have been envisaged in numerous countries. In [New Zealand a “haircut plan”](#) was envisaged as early as 1997 coinciding with Asian financial crisis.

There are provisions in both the [UK and the US pertaining to the confiscation of bank deposits](#). In a joint document of the Federal Deposit Insurance Corporation (FDIC) and the Bank of England, entitled [Resolving Globally Active, Systemically Important, Financial Institutions](#), explicit procedures were put forth whereby “the original creditors of the failed company”, meaning the depositors of a failed bank, would be converted into “equity”. (See Ellen Brown, [It Can Happen Here: The Bank Confiscation Scheme for US and UK Depositors](#), Global Research, March 2013)

What this means is that the money confiscated from bank accounts would be used to meet the failed bank’s financial obligations. In return, the holders of the confiscated bank deposits would become stockholders in a failed financial institution on the verge of bankruptcy.

Bank savings would be transformed overnight into an illusive concept of capital ownership.

The confiscation of savings would be adopted under the disguise of a bogus “compensation” in terms of equity.

What is envisaged is the application of a selective process of confiscation of bank deposits, with a view to collecting debt while also triggering the demise of “weaker” financial institutions. In the US, the procedure would bypass the provisions of the Federal Deposit Insurance Corporation (FDIC) which insures deposit holders against bank failures:

No exception is indicated for “insured deposits” in the U.S., meaning those under \$250,000, the deposits we thought were protected by FDIC insurance. This can hardly be an oversight, since it is the FDIC that is issuing the directive. The FDIC is an insurance company funded by premiums paid by private banks. The directive is called a “resolution process,” [defined elsewhere as](#) a plan that “would be triggered in the event of the failure of an insurer” The only mention of “insured deposits” is in connection with existing UK legislation, which the FDIC-BOE directive goes on to say is inadequate, implying that it needs to be modified or overridden. (Ibid)

Because depositors are provided with a bogus compensation, they are not eligible to the FDIC deposit insurance.

Canada’s Deposit Confiscation Proposal

The most candid statement of confiscation of bank deposits as a means to “saving the banks” is formulated in a recently released document of the Canadian government entitled [“Jobs, Growth and Long Term Prosperity: Economic Action Plan 2013”](#).

The latter was submitted to the House of Commons by Canada’s Minister of Finance Jim Flaherty on March 21 as part of a so-called “pre-budget” proposal.

A short section of the 400 report entitled “Risk Management Framework for Domestic Systemically Important Banks” identifies bail-in procedure for Canada’s chartered banks. The word confiscation is not mentioned. Financial jargon serves to obfuscate the real intent which essentially consists in stealing people’s savings.

Under the Canadian “Risk Management” project:

The Government proposes to implement a ‘bail-in’ regime for systemically important banks.

This regime will be designed to ensure that, in the unlikely event that a systemically important bank depletes its capital, the bank can be recapitalized and returned to viability through the very rapid conversion of certain bank liabilities into regulatory capital.”

This will reduce risks for taxpayers. The Government will consult stakeholders on how best to implement a bail-in regime in Canada.

What this signifies is that if one or more banks (or credit unions) were obliged to “systemically deplete their capital” to meet the demands of their creditors, the banks would be recapitalized through “the conversion of certain bank liabilities into regulatory capital.”

The “certain bank liabilities” pertains (in technical jargon) to the money they owe their customers, namely to their depositors, whose bank accounts would be confiscated in exchange for shares (equity) in a “failing” banking institution.

“This will reduce risks for taxpayers” is a nonsensical statement. What this really means is that the government will not provide funding to compensate depositors who are victims of a failed banking institution, nor will it come to rescue of the failed institution.

Instead the depositors will be obliged to give up their savings. The money confiscated will then be used by the bank to meet their liabilities contracted with major financial creditor institutions. In other words, this entire scheme is “a safety net” for too big to fail banks, a mechanism which enables them as creditors to overshadow lesser banking institutions including credit unions, while precipitating either their collapse or their takeover.

Canada’s Financial Landscape

The Risk Management Bail in initiative is of crucial significance for Canadians across the land: once it is adopted by the House of Commons as part of the budget package, the Bail-in procedures could be applied.

The Conservative government has a parliamentary majority. There is a good likelihood that the [Economic Action Plan 2013](#) which includes the Bail-in procedure will be adopted.

While Canada’s Risk Management Framework intimates that Canada’s banks “are at risk”, particularly those which have accumulated large debts (as a result of derivative losses), a generalised across the board application of the “Bail in” is not contemplated.

The likely scenario in the foreseeable future is that Canada’s “big five” banks, Royal Bank of Canada, TD Canada Trust, Scotiabank, Bank of Montreal and CIBC (all of which have powerful affiliates operating in the US financial landscape) will consolidate their position at the expense of lesser (provincial level) banks and financial institutions.

The Government document intimates that the Bail-in could be used selectively “in the unlikely event that one [bank] becomes non-viable.” What this suggests is that at least one or more of Canada’s “lesser banks” could be the object of a bail-in. Such a procedure would inevitably lead to a greater concentration of bank capital in Canada, to the benefit of the larger financial conglomerates.

Displacement of Provincial Level Credit Unions and Cooperative Banks

There is an important network of over 300 provincial level credit unions and cooperative banks including the powerful Desjardins network in Quebec, the Vancouver City Savings Credit Union (Vancity) and the Coastal Capital Savings in British Columbia, Servus in Alberta, Meridian in Ontario, the caisses populaires in Ontario (affiliated to Desjardins), among many others, which could be the target of selective “Bail-in” operations.

In this context, what is likely to occur is a significant weakening of provincial level cooperative financial institutions, which have a governance relationship to their members (including representative councils) and which, in the present context, offer an alternative to the Big Five chartered banks. According to recent data, there are more than 300 credit unions and *caisses populaires* in Canada which are members of the “Credit Union Central of Canada”.

New Normal: International Standards Governing the Confiscation of Bank Deposits

Canada’s [Economic Action Plan 2013](#) acknowledges that the proposed *Bail-in framework* “will be consistent with reforms in other countries and key international standards”. Namely, the proposed pattern of confiscating bank deposits as described in the Canadian government document is consistent with the model contemplated in the US and the European Union. This model is currently a “talking point” (behind closed doors) at various international venues regrouping central bank governors and finance ministers.

The regulatory agency involved in these multilateral consultations is the Financial Stability Board (FSB) based in Basel, Switzerland and hosted by the Bank for International Settlements (BIS) (image right). The FSB happens to be chaired by the governor of the Bank of Canada, Mark Carney, who was recently appointed by the British government to head the Bank of England starting in June 2013.

Mark Carney, as Governor of the Bank of Canada, was instrumental in shaping the provisions of the Bail-in for Canada’s chartered banks. Before his career in central banking, he was a senior executive at Goldman Sachs, which has played a behind the scenes role in the implementation of the bank bailouts and austerity measures in the EU.

The FSB’s mandate would be to coordinate the bail-in procedures, in liaison with the

“national financial authorities” and “international standard setting bodies” which include the IMF and the BIS. It should come as no surprise: the deposit confiscation procedures in the UK, the US and Canada examined above are remarkably similar.

Bank “Bail-ins” vs. Bank “Bail-outs”

The bailouts are “rescue packages” whereby the government allocates a significant portion of State revenues in favor of failed financial institutions. The money is channeled from the coffers of the State to the banking conglomerates.

In the US in 2008-2009, a total of \$1.45 trillion was channeled to Wall Street financial institutions as part of the Bush and Obama rescue packages.

These bailouts were considered as a *De facto* government expenditure category. They required the implementation of austerity measures. Together with massive hikes in military expenditure, the bailouts were financed through drastic cuts in social programs including Medicare, Medicaid and Social Security.

In contrast to the Bailout, which is funded from the public purse, the “Bail-in” requires the (in-house) confiscation of bank deposits. The bail-ins are implemented without the use of public funds. The regulatory mechanism is established by the central bank.

At the outset of Obama’s first term in January 2009, a bank bailout of the order of \$750 billion was announced by Obama, which was added on to the 700 billion dollar bailout money allocated by the outgoing Bush administration under the Troubled Assets Relief Program (TARP).

The total of both programs was a staggering 1.45 trillion dollars to be financed by the US Treasury. (It should be understood that the actual amount of cash financial “aid” to the banks was significantly larger than \$1.45 trillion. In addition to this amount defence allocations to fund Obama’s war economy (FY 2010) was a staggering \$739 billion. Namely the bank bailouts plus defence combined (\$2189 billion) eat up almost the totality of the federal revenues which in FY 2010 amounted to \$2381 billion.

Concluding remarks

What is occurring is that the bank bailouts are no longer functional. At the outset of Obama’s Second term, the coffers of the state are empty. The austerity measures have reached a deadlock.

The bank bail-ins are now being contemplated instead of the “bank bailouts”.

The lower and middle income groups which are invariably indebted will not be the main target. The appropriation of bank deposits would essentially target the upper middle and upper income groups which have significant bank deposits. The second target will be the bank accounts of small and medium sized firms.

This transition is part of the evolution of the global economic crisis and the impasse underlying the application of the austerity measures.

The purpose of the global financial actors is to wipe out competitors, consolidate and centralize bank power and exert an overriding control over the real economy, the

institutions of government and the military.

Even if the bail-ins were to be regulated and applied selectively to a limited number of failing financial institutions, credit unions, etc, the announcement of a program of confiscation of deposits could potentially lead to a generalized “run on the banks”. In this context, no banking institution would be regarded as safe.

The application of Bail-in procedures involving deposit confiscation (even when applied locally or selectively) would create financial havoc. It would interrupt the payments process. Wages would no longer be paid. Purchasing power would collapse. Money for investment in plant and equipment would no longer be forthcoming. Small and medium sized businesses would be precipitated into bankruptcy.

The application of a Bail-In in the EU or North America would initiate a new phase of the global financial crisis, a deepening of the economic depression, a greater centralization of banking and finance, increased concentration of corporate power in the real economy to the detriment of regional and local level enterprises.

In turn, an entire global banking network characterized by electronic transactions (which govern deposits, withdrawals, etc), –not to mention money transactions on the stock and commodity markets– could potentially be the object of significant disruptions of a systemic nature.

The social consequences would be devastating. The real economy would plummet as a result of the collapse in the payments system.

The potential disruptions in the functioning of an integrated global monetary system could result in a renewed global economic meltdown as well as a drop off in international commodity trade.

It is important that people across the land, in the European Union and North America, nationally and internationally, forcefully act against the diabolical ploys of their governments –acting on behalf of dominant financial interests– to implement a selective process of bank deposit confiscation.
