

The Deaths of the Two Immigrant Children Could Have Been Vaccine-induced

(Don't trust the ORR, the AAP, the CDC or the ACIP to tell the truth about ANY vaccine-induced or drug-induced iatrogenic disease)

By [Dr. Gary G. Kohls](#)

Global Research, December 28, 2018

Region: [USA](#)

Theme: [Media Disinformation](#), [Science and Medicine](#)

The Office of Refugee Resettlement (ORR) requires that all unaccompanied alien children (UAC) be vaccinated while in ORR custody in accordance with the Advisory Committee on Immunization Practices (ACIP) catch-up schedule (see [this](#)). [The potentially lethal schedule mandated by the Centers for Disease Control \(CDC\) ACIP or ages 7 - 18 are acknowledged by the CDC.](#)

Many of these vaccines have the neurotoxic metallic adjuvant aluminum in the injected solution and some have live viruses in them, (If influenza vaccinations occur, these children will be intra-muscularly injected with the neurotoxic mercury, the second-most poisonous substance (behind plutonium) on the planet.)

An unknowable number of the vaccines can be expected to be contaminated with dangerous extraneous substances, depending on the country of origin and the sloppiness with which the vaccine batch is manufactured.

If all these vaccines are injected at one sitting (as can be expected at the ORR), some of the children will likely develop some sort of (acute and/or chronic) vaccine-induced illness, and some will certainly be so seriously poisoned that they will die.

Given the bureaucratic “efficiency” (and total lack of informed consent or adherence with the Precautionary Principle) with which most children in the US (not just immigrants) are dealt with by American Academy of Pediatrics (AAP) pediatricians in their offices, none of the “despised” non-white immigrants kids will have their immunization histories checked prior to the inoculation cocktails being given.

Thus unknown percentages of children who have already been fully vaccinated in their homelands will be at risk of having anaphylactic reactions from the second or third dose of a inoculum to which they had developed a mild allergic reaction (which sets them up for a more serious anaphylactic reaction when the next shot is administered).

Also none of the victims will be even partially informed (much less fully informed in a language that the child victims don't understand) about the risks or benefits of having so many potentially toxic vaccines intramuscularly injected all at once.

Of course the bureaucratic para-professionals from ORR that are doing the injecting don't know the risks themselves – nor, as a matter of fact, do the pediatricians in charge, since no

safety studies have ever been done on cocktails of vaccines given simultaneously, even in the rat lab!
