This article first published eight years ago on March 5, 2013 reveals issues pertaining to the vaccination of children and the role of the Bill and Melinda Gates foundation.

Bill Gates of the Bill & Melinda Gates Foundation and New York City Mayor Michael Bloomberg were interviewed on Charlie Rose on February 28th, 2013 that mainly focused on the Global Polio Eradication Initiative and how “new approaches” to their agenda can be utilized.

Bill Gates along with Michael Bloomberg has contributed large sums of money to numerous causes such as the Global Polio Eradication Initiative originally launched in 1988 by the World Health Organization (WHO), Rotary International, Centers for Disease Control and Prevention (CDC), and the United Nations Children’s Fund (UNICEF).

Bill Gates has been in the forefront for the depopulation agenda which he publically stated in 2010 during a conference for TED (Technology, Entertainment and Design) that:

“The world today has 6.8 billion people... that’s headed up to about 9 billion. Now if we do a really great job on new vaccines, health care, reproductive health services, we could lower that by perhaps 10 or 15 percent.”

The Charlie Rose interview was an indication on how new technological advances can possibly help them vaccinate the majority of children in the Third World including Nigeria, Pakistan, Afghanistan and other countries throughout Africa.

The technology used to track children for vaccinations is dangerous. It sets the precedence to target children in many Third World countries. Charlie Rose asked Bill Gates about the “New Approaches” used in the process:

Charlie Rose: You mentioned the five or a six year plan the new initiative has learning from old lessons and therefore, coming up with new approaches. What are the new approaches?

Bill Gates: Well, we’re able to use new technology like satellite photos to see are there people moving around, nomadic roots. You know we see if when we go out to get all

the children, if there's some settlement areas that we've actually missed. We also put a – a phone in the vaccine box they carry around that looks where they're located every three minutes and so it has that GPS data. At the end of the day you plug that in and compare it to where they were asked to go, and you can see if you're – you're really covering all the kids.

The “New Technology” used to locate children to administer vaccinations is a method that will be introduced to many countries targeted for depopulation. It is a scenario that poses a threat to humanity.

The Polio vaccine has contributed to the more deadly ‘Non-Polio Acute Flaccid Paralysis (NPAFP)’. NPAFP is not any different from polio paralysis, but it is twice as dangerous.

In an article titled “Study: Polio vaccine campaign in India has caused 12-fold increase in deadly paralysis condition” by alternative health website *naturalnews.com* staff writer Ethan A. Huff reported that:

“The mainstream media has been busy hailing the supposed success of India’s polio vaccine campaign over the past few years, with many news outlets now claiming that the disease has been fully eradicated throughout the country. But what these misinformation puppets are failing to disclose is the fact that cases of non-polio acute flaccid paralysis (NPAFP), a much more serious condition than that caused by polio, have skyrocketed as a result of the vaccine’s widespread administration”

What the polio vaccine has done was increase a more severe condition called non-polio acute flaccid paralysis (NPAFP).

In 2011, for instance, the year in which India was declared to be polio-free, there were 47,500 known cases of NPAFP, which is a shockingly high figure under the circumstances. And based on data collected from India’s National Polio Surveillance Project, cases of NPAFP across India rose dramatically in direct proportion to the number of polio vaccines administered, which suggests that the vaccines were responsible for spurring the rapid spread of this deadly condition.

Not only has NPAFP increased 12 times due to the Polio Vaccine campaign, the cost to India increased 100 times more than the original amount as well. Huff wrote:

According to the IJME report, the entire polio vaccine scam in India was spawned from initial grants made by the Bill & Melinda Gates Foundation and various other groups that claimed the program would eventually pay off. But the overall costs once India started paying for the program quickly ballooned to more than 100 times the initial investment amount, with more than \$2.5 billion and counting still being funneled into it.

The Global Polio Eradication Initiative is a fraud. But more importantly, it is a dangerous step towards forced inoculations by the global elites who claim that their philanthropies are supposed to help people. Overall, it sets a dangerous path towards an Orwellian society that will be monitored and targeted for vaccinations that do more harm than good. The ultimate goal is depopulation, not saving populations.
