

The 'Great Reset': A Technocratic Agenda that Waited Years for a Global Crisis to Exploit

How the 'great reset' ideology of un-elected bureaucrats would steer society towards massive surveillance & control: perspective

In the face of a global pandemic, an un-elected body of global bureaucrats based in Davos, Switzerland has asked the world to trust its vision of a technocratic "great reset," knowing full well the public would never go for such a request had it not been for the golden opportunity they'd all been waiting for.

When the head of the World Economic Forum (WEF), [Klaus Schwab, announced in June](#) that "Now is the time for a great reset," it wasn't the first time he called for it.

In fact, he called on the WEF to start the great reset over five years ago (see video below), but this year he's saying that COVID-19 is the most urgent reason to restructure all of society and the global economy.

The great reset agenda was already in place long before the coronavirus pandemic, and the WEF was just waiting for a crisis to exploit it.

Prior to this year, implementing worldwide lockdowns that destroy businesses, wreck the economy, and leave people destitute and stripped of their constitutional rights while trying to enact invasive contact tracing, immunity passports, and otherwise massive bio-electronic surveillance apparatuses would never have been accepted by the citizens of a free society

The so-called great reset is an old ideology touted for decades by globalists like Henry Kissinger, who opined in 2014, "Never before has a new world order had to be assembled from so many different perceptions, or on so global a scale."

The great reset is the proposed mechanism for setting in motion a new global order, but it wouldn't be possible to bring forth such a bold plan without a global crisis, be it manufactured or of unfortunate happenstance, that shocks society to its core.

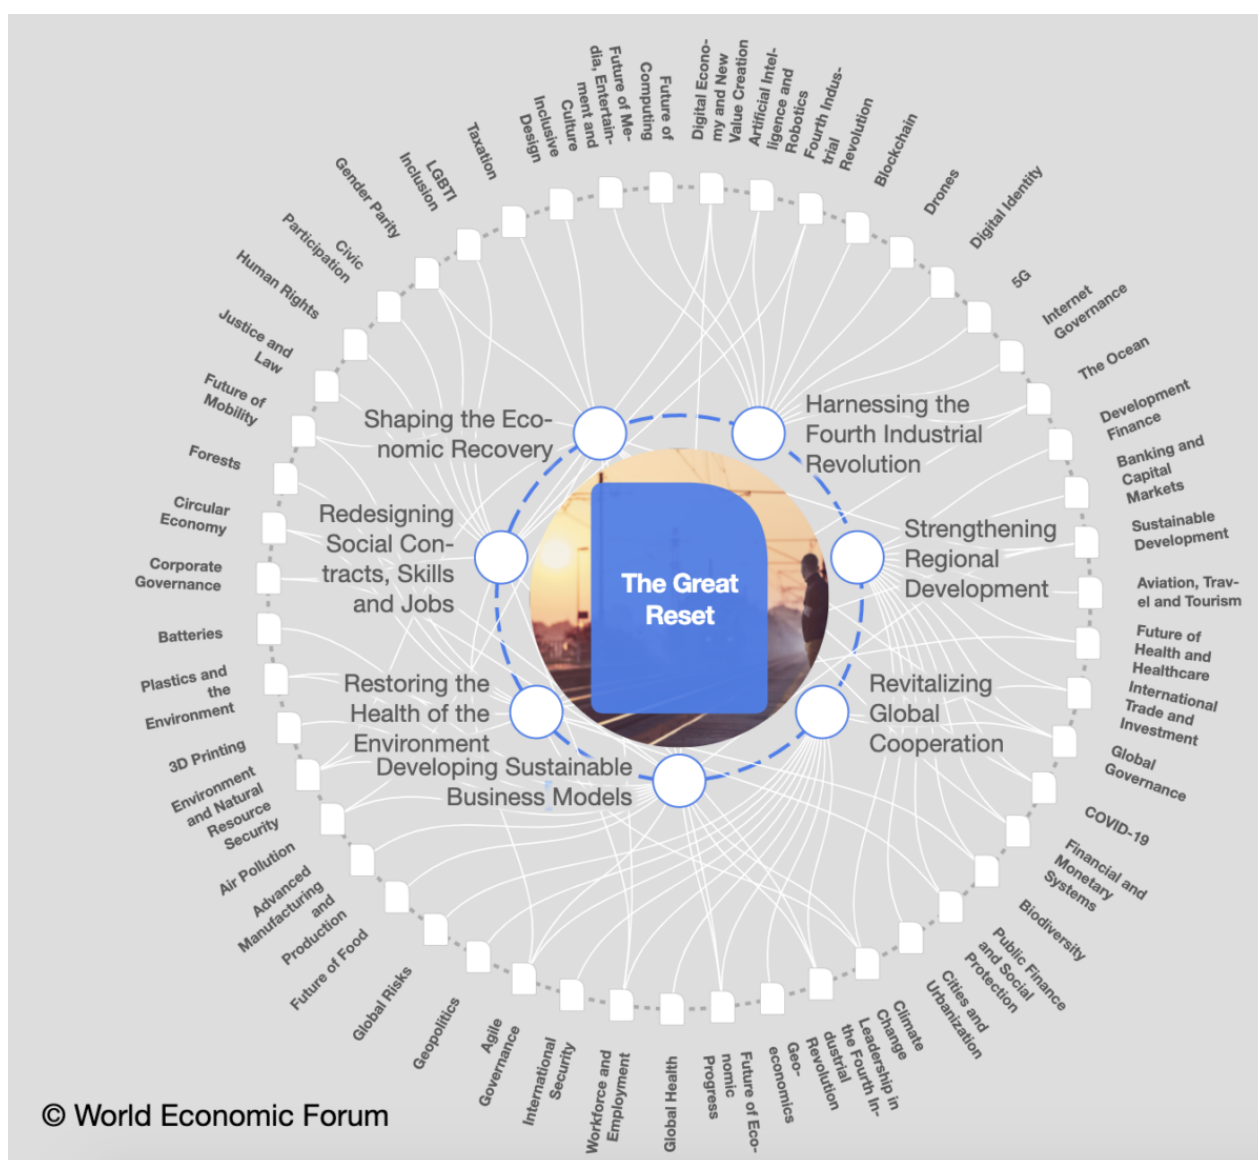

"The pandemic represents a rare but narrow window of opportunity to reflect, reimagine, and reset our world to create a healthier, more equitable, and more prosperous future" — Klaus Schwab, WEF

In this story, I will attempt to dissect:

- What types of invasive surveillance technologies will be required by the great reset
- Why the great reset is being re-branded and pushed in 2020
- How the Davos crowd is trying to sell the great reset Utopia
- Who will be asked to give up their privacy for the common good
- When humans become hackable
- Where you have the power to choose

With the arrival of the coronavirus pandemic, the WEF has the perfect excuse to quickly enact its vision for steering society towards a more invasive and intrusive, technocratic future in the name of serving the common good.

The un-elected architects of the great reset envision a Utopian world of inclusivity, equality, and sustainability that will require trust in emerging technologies like AI, 5G, Blockchain, and robotics, in order to usher in their golden dawn.

WEF Great Reset Agenda

Great Reset Will Require Trust in Invasive Surveillance Tech: WEF Promotes Health

Passports & Contact Tracing

In order to bring about the great reset, it will require trust in the technology, and to be more specific, the WEF would like to have greater trust in “crisis-relevant tech,” which includes developing digital health passports and contact tracing, under a new form of internet governance.

“The use of digital technology during the COVID-19 crisis offers clear lessons [...] Target mistrust broadly to enable specific crisis-relevant tech” — Daniel Dobrygowski, WEF

“The Great Reset will require new institutions and business models, and new digital technologies to build them,” [wrote](#) the WEF Head of Corporate Governance and Trust, Daniel Dobrygowski, in a blog post. “The necessary collaboration, however, is only possible if we solve the digital trust problem,” he added.

According to the Dobrygowski, “The use of digital technology during the COVID-19 crisis offers clear lessons,” one of those being, “Target mistrust broadly to enable specific crisis-relevant tech.”

The WEF openly supports the development of so-called “crisis-relevant tech” as evidenced by its backing the development of health passports, which act as digital records of your health status to determine whether or not you are free to travel or even go outside.

Earlier this year the WEF announced it was [supporting the development and launch of CommonPass](#)— a platform whose mission is “to develop and launch a standard global model to enable people to securely document and present their COVID-19 status (either as test results or an eventual vaccination status) to facilitate international travel and border crossing while keeping their health information private.”

“Contact tracing apps can be powerful weapons against the virus - but they can also be tools for state surveillance” — WEF report

The WEF also lent its support to another health passport initiative called CovidPass, which was built by one of the WEF’s own “Young Global Leaders,” [Mustapha Mokass](#), who used to be an advisor at the World Bank.

[CovidPass](#) “uses blockchain technology to store encrypted data from individual blood tests, allowing users to prove that they have tested negative for COVID-19.”

In supporting both CommonPass and CovidPass, the Davos elite have made it clear they want “crisis-relevant tech” like health passports to be part of the great reset solution.

Ask yourself, would the idea of being forced to electronically prove your current health status in order to travel or even leave your own home have been acceptable 10 months ago?

Why is this happening now?

The die was cast years ago, but only now do the Davos elite see a shrinking, yet golden

opportunity, to create a new world order out of the coronavirus chaos.

COVID Presents a 'Shrinking, Golden Opportunity', Great Reset Is Not a Response to the Coronavirus

In June Prince Charles praised the great reset agenda for its potential to “make people more receptive to big visions of change” after having suffered through “unprecedented shockwaves.”

“We have a golden opportunity to seize something good from this crisis — its unprecedented shockwaves may well make people more receptive to big visions of change,” the prince told the WEF.

Would the idea of being forced to electronically prove your current health status in order to travel or even leave your own home have been acceptable 10 months ago?

Prince Charles may have let on more than he cared to share, or thought you would notice. Again, he's telling you that the great reset was always the plan. COVID-19 is the excuse.

In other words, the coronavirus crisis presents a golden opportunity for the global establishment to further its agenda upon a frightful and angry population that has been so beaten down by the pandemic and subsequent lockdowns that they will have become more susceptible to giving over their freedoms to the idea of greater centralized power and control.

Prince Charles went on, “As we move from rescue to recovery, we have a unique but rapidly shrinking window of opportunity to learn lessons and reset ourselves on a more sustainable path. It is an opportunity we have never had before and may never have again.”

“We have a golden opportunity to seize something good from this crisis — its unprecedented shockwaves may well make people more receptive to big visions of change” — Prince Charles

The British royal's words echo those of WEF Director Schwab, who said, “The pandemic represents a rare but narrow window of opportunity to reflect, reimagine, and reset our world to create a healthier, more equitable, and more prosperous future.”

Again, why is the window of opportunity so narrow? Could the seeds of their grand strategy only flower while the world was distracted and divided amidst the chaos?

The Lure of Utopia Has Many Hooks: Giving Up Privacy & Freedom for the Common Good

Prior to this year, implementing worldwide lockdowns that destroy businesses, wreck the economy, and leave people destitute and stripped of their constitutional rights while trying to enact invasive contact tracing, immunity passports, and otherwise massive bio-electronic surveillance apparatuses would never have been accepted by the citizens of a free society.

But the coronavirus pandemic has opened a “narrow window” for a “golden opportunity,”

and once this crisis is over, the Davos club fears that the window may be shut forever.

The WEF admits in its own contact tracing governance framework that “Contact tracing apps can be powerful weapons against the virus – but they can also be tools for state surveillance.”

Yet, the WEF believes that people should balance certain freedoms to serve the common good. It is a global vision without a clear end, and it is one that flies in the face of constitutional republics that protect certain unalienable rights.

“This new mindset would balance concerns over privacy and other issues with the potential to create value and improve lives” — WEF report

[According to the WEF framework](#), enacting contact tracing technology would “not be easy and will require a new social consensus that embraces the use of technology to resolve problems for the good of all.”

Additionally, “This new mindset would balance concerns over privacy and other issues with the potential to create value and improve lives.”

In order to enact invasive technologies upon the population, citizens of the world will have to realize that it’s for the greater good and that they should change their mindsets to be less concerned about “privacy and other issues” and more excited about “the potential to create value and improve lives.”

The great reset “will require stronger and more effective governments [...] and it will demand private-sector engagement every step of the way” — Klaus Schwab, WEF

Just about every proponent of contact tracing and health passports, including the WEF, all declare that [technology should be used and governed ethically](#), but you hardly see any mention of winning the consent of the people.

Instead, they lobby stakeholders and policymakers to carry the torch in imparting the global vision from the top of the capstone and on-down.

“As we move from rescue to recovery, we have a unique but rapidly shrinking window of opportunity to learn lessons and reset ourselves on a more sustainable path. It is an opportunity we have never had before and may never have again” — Prince Charles

If the coronavirus were to disappear from the earth today, would the WEF have to wait for a new global crisis, or would it push-on with the same reset agenda, regardless?

According to the WEF director, the great reset “will require stronger and more effective governments [...] and it will demand private-sector engagement every step of the way.”

“The world must act jointly and swiftly to revamp all aspects of our societies and economies, from education to social contracts and working conditions,” he added. “We must build

entirely new foundations for our economic and social systems.”

In creating order out of the coronavirus chaos, the great reset promises to bring about “a more secure, more equal, and more stable world.”

Is that how they plan to win our trust? By promising us a Utopia if we just go along with it?

Bio-Electronic Surveillance and Hackable Humans

We haven’t even gotten into how the great reset would affect the world’s money system and the role of blockchain and digital payments, but when you look at digital health passports and contact tracing apps, you are looking at sophisticated form of bio-electronic surveillance that the world has never been seen before.

“We are no longer mysterious souls; we are now hackable animals” — Yuval Harari, WEF

When you combine biological data with advanced computing power, what you get is the ability to hack humans.

Speaking in Davos over the past few years, [historian Yuval Harari has stated that “organisms are algorithms”](#) and that “new technologies will soon give some corporations and governments the ability to hack human beings.”

“The power to hack human beings can of course be used for good purposes like provided much better healthcare,” [said Harari, adding](#), “but if this power falls into the hands of a 21st Century Stalin, the result will be the worst totalitarian regime in human history, and we already have a number of applicants for the job of 21st Century Stalin.”

“In Stalin’s USSR the State monitored members of the Communist elite more than anyone else. The same will be true of future total surveillance regimes.”

The great reset calls to restructure every aspect of society, and it can only do so if people trust the increasingly invasive, bio-electronic surveillance technology they wish to deploy.

“In Stalin’s USSR the State monitored members of the Communist elite more than anyone else. The same will be true of future total surveillance regimes” — Yuval Harari, WEF

The more people know that someone is watching them, [the more they will change their behavior](#). Just being aware that someone is monitoring your every digital transaction, will cause you to conform to certain norms.

As a population grows-up under massive surveillance, it will adapt its behavior to appear normal to society but compliant to authority. Over time, the citizens will police themselves out of fear.

Take a look at [Communist China’s surveillance state](#), and you will see what I mean.

The WEF Wants to Win Your Trust, You Have a Choice

Tyranny arrives in subtle stages. It's slow at first, but before you realize it even exists, it has already won.

That is what I see happening with the unholy merger of "the great reset" with "the new normal."

Those who pull the strings have been begging for a global crisis to unleash their worldwide restructuring of society and the economy.

This year, in the face of a global pandemic, an un-elected body of global lobbyists based in Davos, Switzerland has asked you to have faith in their vision of a technocratic Utopia, knowing full well they could never issue such a request had it not been for the golden opportunity they had all been waiting for.

And that is where your power lies, dear reader. It's your choice.

You can believe the WEF vision shared by some of the world's most influential bureaucrats, or you can be skeptical of the whole establishment agenda that asks you to just trust the plan.
