COVID-19: 324,990 deaths recorded worldwide ...

Ursula von der Leyen, President of the European Commission, has launched a Global Telethon to speed up the delivery of a corona vaccine for all.

Deaths attributable to lack of access to water on planet earth: 1,922,148 deaths since 1 January worldwide (more than 5,000,000 deaths per year, many of them children)!

Water for All? No World Telethon for Water and Food...

Introduction

A graduate in anaesthesia and resuscitation for 17 years in Belgium, I am used to wearing a mask and seeing others wearing one.

Why impose this far from insignificant gesture on a whole healthy population despite the strong opposition of a large number of specialists?

See this article: "[Wearing masks is not necessarily effective, and can even promote contamination, experts warn.](#)"

On the other hand, I do not hear any media campaign supported by all political voices, including that of Ursula von der Leyen, president of the European Commission (image right) or Tedros Adhanom Ghebreyesus (WHO Director General since 2017), for the strengthening of the immune system of populations, to correct their deficiencies in vitamin D, vitamin C and zinc, essential elements of our anti-infectious defenses: see the references of this article "[COVID 19 - An ocean of fears and lies](#)".

Fear and death oriented media are omnipresent and create a stressful morbid climate.

As far as I know, there is not a word about these shortcomings.

Although I am used to offering chemical, technological and modern solutions to my patients, I see above all the iatrogenesis of this mechanical and arrogant medicine:

“More and more frequently, drugs cause side effects, the pathologies caused by the treatments, including surgery, are worse than those that have led to the admission of patients who are increasingly poly-medicated (often more than ten drugs to be taken every day).”

For years, the state of health of Belgians admitted to intensive care following surgery or chronic diseases has been increasingly deplorable.

A plausible explanation comes from their bad eating habits, their addictions (alcohol, tobacco, sugar), increasingly morbid obesity (a real modern scourge – [Today, 39% of adults \(18 years and over\) in the world are concerned by obesity \(BMI>30\)!\) and sedentary lifestyles.](#)

Where are the impassioned debates on these subjects, the real underlying problems highlighted by this current crisis in addition to the deterioration of environmental conditions (pollution) and the deterioration of the quality of public services for reasons of profitability.

Vaccines, masks and lock down (confinement)!

Our health authorities and journalists have only these words in their mouths.

See the article: [Coronavirus: only a vaccine could allow “normality”, according to the UN chief.](#)

What about water, food?

Vaccines OR water for everyone?

On our planet, in terms of good health for all and distributive justice, where are the priorities?

Faced with an emerging infectious disease, the usual response of “rich” countries to the mirage of safe and effective immunization is to rely on the mirage of safe and effective immunization, a source of recurrent controversy among their populations [1].

1. This was the case in 2009, during the H1N1 influenza epidemic, which the WHO quickly qualified as a pandemic. [It was a fraud] Following WHO guidelines, most countries purchased excessive quantities of vaccine in an emergency. Some spent excessive amounts of money.

2. In France, nearly 100 million doses were ordered while the vaccine had not yet obtained a marketing authorization! [2]. 6 million French people were to be vaccinated. 60 million worldwide.

3. In the United States, Dr. Anthony Fauci [3], already director of the NIAID (National Institute of Allergy and Infectious Diseases), has also supported a multi-billion dollar influenza A H1N1 vaccine project in 2009. In Belgium, this H1N1 vaccine hysteria cost

the Belgian State 85 million euros and 20 million euros to the Social Security while transferring 80.2 million euros to the pharmaceutical companies [4].

4. Money from the public purse wasted on an epidemic with alleged and exaggerated consequences according to the WHO and the alarmist predictions of its epidemiologists [already – 5], to which must be added a much more serious fact, neurological after-effects in a large number of vaccinated people.

The Pandemrix vaccine manufactured by GSK (GlaxoSmithKline) caused narcolepsy and cataplexy [6] in about one in 16,000 people. Across Europe, more than 800 children are known to have been made ill by this vaccine [7].

The parents of five-year-old Amina Abudu blame her 2009 death on a flu shot. Peter J. Thompson/National Post

At rare trial of alleged vaccine side effects, parents say H1N1 flu shot killed 5-year-old daughter

In 2009, Governments faced major pressure to procure the vaccine and administer it widely, but at the same time there were concerns about its safety

Brain-Damaged UK Victims of Swine Flu Vaccine to Get £60 Million Compensation

PACE to prepare report on the handling of the Swine Flu pandemic

26/01/2010 11:02:52

SOCIAL AFFAIRS, HEALTH AND SUSTAINABLE DEVELOPMENT

"Are decisions on pandemics taken on the best scientific evidence only?" was the question asked at a January public hearing of PACE's Committee on Social, Health and Family Affairs which looked into the handling of the H1N1 pandemic. The World Health Organisation's flu chief defended his organisation, saying its advice was not improperly influenced by the pharmaceutical industry.

The committee now intends to hold a second public hearing in Paris, with the participation of government officials who dealt with the pandemic. Rapporteur Paul Flynn (United Kingdom, SOC) is also due to visit the WHO's headquarters in Geneva. His report should be available at the end of April, for a possible plenary debate in June.

We must be vigilant to ensure that this does not happen again

Let's not make the same mistakes again.

Thus, on the occasion of this new viral crisis 2020, the European Union and its president Ursula von der Leyen have already made a worldwide Telethon to finance research on vaccines against the new coronavirus [8].

The WHO (World Health Organization) has mobilized politicians and economic actors to provide a vaccine for everyone on the planet [9].

With the support of political authorities, research and scientific actors are all in a real race against time to bring to market a new vaccine against SARS-CoV-2, the coronavirus responsible for the disease called COVID-19 [10].

Emergency, rush!

At the cost of once again taking risks with the health of populations, which raises ethical questions because this "covert" research involves deliberately subjecting healthy people to

a dangerous virus [11], without going through all the necessary steps to develop the vaccine.

With each epidemic, each pandemic, the vaccine solution is offered to people as a universal panacea by official bodies such as the WHO and national health institutes and, in turn, by our governments.

Beyond the real risks of rushing to vaccinate everyone too early with expensive, unsuitable and dangerous products, as we saw in 2009, this race for vaccines always underlines the unequal priority of objectives between “rich” and “poor” countries.

It means forgetting that the best remedy for diseases, especially infectious diseases, is to improve living conditions, access to safe food and drinking water, the possibility of living in healthy environments and the adoption of basic hygiene measures.

It was by improving access to water and wastewater treatment that humans made a significant contribution to global health, long before the invention of vaccines.

It was “simple” hygienic practices such as hand washing that drastically reduced the rate of infections in hospitals.

For example, the pioneering Hungarian obstetrician Ignace Semmelweis (1818-1865) drastically reduced mortality in maternity wards at the Vienna General Hospital [12].

These “simple” solutions are still sorely lacking in too many countries of the world.

Water

According to regularly updated global statistics [13], as of 15 May 2020, 1 million 923 thousand people have died since the beginning of this year due to lack of access to water in the world [14].

Lack of access to water causes more than 5 million deaths worldwide each year, many of them children.

Lack of access to water kills as much as tobacco.

As far as drinking water is concerned, there are still 786 million people (11% of the world’s population) who do not have access to it.

According to the UN, about 5 million more people die from infectious or parasitic diseases caused by wastewater that contaminates them every year.

Malnutrition

Malnutrition is a serious condition caused mainly by the lack of essential nutrients.

Between 2 and 5 million malnourished children die each year.

According to [Planetoscope](#), malnutrition is responsible for half of all deaths of children under 5 years old.

As Jean Ziegler [15], a Swiss politician, sociologist, writer and special rapporteur for the right

to food (of populations) of the UN Rights Council from 2000 to 2008, puts it:

“Given the current state of agriculture in the world, we could feed 12 billion people without difficulty. To put it another way, every child who currently dies of hunger is, in reality, murdered. »

Health needs are very uneven across the world.

For example, a child born today in Sweden can expect to live for more than 80 years; but he or she will live for less than 70 years if born in Brazil, less than 63 years if born in India and less than 50 years if born in Lesotho [16].

These inequalities are unjust but avoidable.

Where is Ursula von der Leyen’s European Union Telethon to eradicate lack of access to water and malnutrition?

Is there no vaccine against malnutrition?

Why not devote these billions of euros or dollars, since they exist for vaccines, to ensure first and foremost access to basic health care for everyone in the world?

Why has the WHO not mobilised all its huge political and economic resources to provide everyone on this planet with drinking water and food (essential nutrients) once and for all?

Reading me, I think you know the answers to all these questions.
