

Health Effects of Covid Vaccines: Americans Shouldn't be Forced to Take One-Size-Fits-All Vaccine

Fox News commentator, Tucker Carlson, told viewers even though President Biden said COVID vaccines won't be mandated, Biden is supporting mandates by allowing private industry to require the vaccines.

In the segment below on last night's "Tucker Carlson Tonight," Fox News commentator Tucker Carlson said, "there are unresolved concerns" about the long-term health effects of [COVID vaccines](#), including on female fertility and [pregnant women](#).

The American people should not be forced to take a one-size-fits-all medical treatment, Carlson explained. "No medicine is designed for every person in all circumstances," he said.

Last month, the Biden administration [said](#) the federal government will not require all Americans to get the COVID vaccine, nor will it require [vaccination passports](#). But the truth is, when it comes to COVID vaccines, President Biden is not pro-choice, he's pro-mandate, Carlson said.

He added:

"The question of whether to take them, whether to have powerful drugs injected into your body is the most intimate kind of personal health decision. Politicians and bureaucrats should have no role in a decision like that."

But just because there's no federal [mandate](#) to get the COVID vaccine doesn't mean you or your family won't be required to get it, Carlson explained. With support from the Biden administration, "private industry and nonprofits may be forcing you to," he added.

Carlson noted that [colleges and universities](#) are [requiring](#) COVID vaccinations in some form, including the entire University of California system, the largest in the country.

Based on what we know about [COVID](#) and its effect on young people, Carlson said it [doesn't make sense](#) to require them to get the vaccine — yet nobody is asking why college students

need the vaccine.

“Why would we immunize people against a virus for which they already have antibodies?” Carlson asked. On top of that, he reminded viewers, no coronavirus vaccines have been [fully licensed](#) by the U.S. Food and Drug Administration.

Carlson said:

“From a medical standpoint, it’s hard to understand the reasoning behind this. As a group, young people are not at risk of dying from COVID. Huge numbers of college students have already been infected with the coronavirus and therefore have natural immunity to it.”
