

Turbo Colon Cancer: Diagnosis to Death in Three Weeks, the Tragic Story of a 44-Year Old Ohio High School Teacher Jeff Clark

There are many such reported cases after COVID-19 mRNA vaccination.

According to doctors who have been pushing toxic, experimental COVID-19 mRNA vaccines, Pfizer or Moderna mRNA vaccines cannot cause aggressive cancers, which have been called "turbo cancers".

Yet, we continue to see COVID-19 mRNA vaccinated young people come down with extremely aggressive cancers that are resistant to conventional cancer treatments, and that are fatal within months, weeks, days and sometimes even hours.

The Tragic story of 44 year old Ohio High school teacher Jeff Clark

Cincinnati, Ohio – Indian Hill High School's choir and theater director Jeff Clark died Tuesday after a short battle with colon cancer. ([click here](#))

The turn in Jeff Clark's health began two months ago.

Clark had created a [GoFundMe](#) for his "unexpected healthcare needs," stating his life had "taken a drastic turn" since late March 2023. He was on a Europe trip with choir students when he started experiencing digestive issues.

"Through numerous tests that included blood work, ultrasound, MRI, CT scans, and a colonoscopy, we learned the devastating news that I have colon cancer that has metastasized as 3 tumors in my liver"

Biopsy and rapid progression:

He discovered the primary tumor was colon cancer after a biopsy on May 19, 2023. His loved ones described the cancer as “extremely fast growing.” ([click here](#))

Despite continued biopsies, treatments and therapies, Clark said his health continued to decline. ([click here](#))

The district said Jeff Clark died Tuesday (June 6, 2023) after being transferred into hospice following a complicated surgery due to his advanced stage four colon cancer. ([click here](#))

Indian Hill High School’s Principal Jeff Damadeo aggressively pushed COVID-19 vaccines in his school:

My Take...

From diagnosis on May 19, 2023, to death on June 6, 2023, is only 3 weeks.

That is unheard of, for colon cancer. Even when you start counting from symptoms in late March, it would only be 2 months from onset of symptoms until death. I’ve never seen such rapid progression with colon cancer.

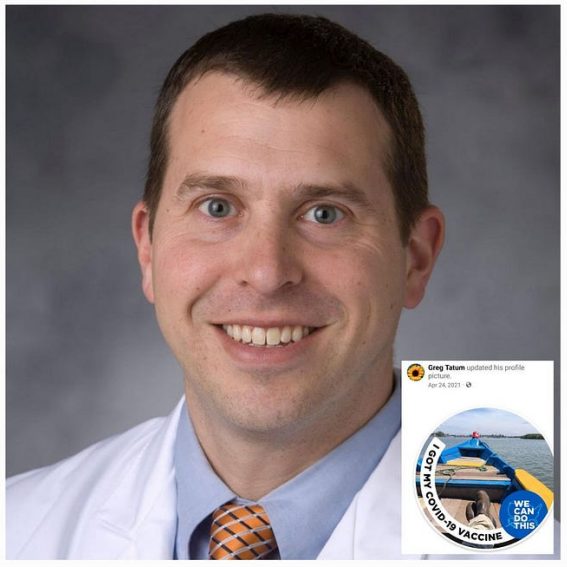

I’ve written several substacks on COVID-19 mRNA vaccine induced turbo cancers which have been observed in:

- [leukemias](#) (blood cancers)
- [glioblastomas](#) (brain cancers)
- [sarcomas](#) (muscle, bone and soft tissue cancers)

But there has also been an explosion in rapidly progressive breast cancers, lung cancers, gallbladder cancers, pancreatic cancers, lymphomas and more, and I will be writing substack articles about these in the coming days.

One case does not make a pattern, so I always examine other possible cases.

Greensboro, NC – 49 year old pediatric Oncologist Dr. Gregory Howard Tatum died after 11 month battle with colon cancer ([click here](#))

Obituary for Gregory Howard Tatum

Dr. Gregory Howard Tatum passed away on Monday, November 14, 2022, at the age of 49 years old surrounded by his loving family [following an 11-month battle against colon cancer](#); He was born on June 13, 1973, in Nacogdoches, Texas to the late Paul Ellis Tatum, Jr. and Ella Lester Tatum.

Dr. Tatum graduated from Southwestern University in 1995 with a bachelor's degree in science with sum cum laude honors. He earned his Doctor of Medicine degree in 1990 from Mayo Medical School. Following medical school, he completed a 3-year pediatric residency at the University of North Carolina Chapel Hill. He went on to complete his formal education at the University of Pittsburgh specializing in Pediatric Cardiology (2006). At the time of his death, Greg was employed as a Pediatric Cardiologist for Duke University. He also completed many volunteer international medical missions to provide healthcare for the underserved with Gift of Life international.

Greg is predeceased by his father, Paul Ellis Tatum, Jr. He is survived by his beloved wife of 20 years, Jennifer Boulware Tatum; Mother, Ella Tatum; children, Jack Gregory and Sam Parker Tatum; brothers, Dr. Paul Tatum III (Helene) and Richard "Eric" Tatum; mother and father-in-law, Mack and Becky Boulware; sister-in-law, Ashley Poole; nieces and nephews, Adriana Tatum, Will Tatum, Lindley Tatum, Nate Tatum, Cecelia Tatum, Ethan Tatum, Taylor Poole, Tanner Poole and Lily Poole; and his furry, faithful companion, Ruby.

Dr. Tatum was COVID-19 vaccinated, we know that for a fact. We don't know how many booster shots he took. At 49 years of age, he died after an 11 month battle against colon cancer. The story itself is highly suspicious for a COVID-19 vaccine induced Turbo Colon Cancer.

Twitter Reports of Turbo Colon Cancer

My sister, colon cancer, surgery 6 months of chemo, 6 months later surgery again.

Neighbor turbo lung and colon cancer, 12 hour surgery now a year of immunotherapy.

3 clients turbo cancer, breast, colon. All after 2 jabs. Then strokes, miscarriages, neuropathy etc.

I'm in shock. Total shock. One of my great mates, unabused 📄 has suddenly got the 'turbo colon cancer'. Weeks to live. I can't work it out. A very young family. It's a catastrophic scenario. Is this 5G & MKUltra in action? Or is the result of tons of 'testing' - Why?

Ang_Sugboanon @Ang_Sugboanon · Feb 1

Replying to @JojoAnn4Liberty @Lambda67 and @goddeketal

It has been labeled as Turbo Cancer. It's real. Since the vax rollout there has been a sharp increase of cancers that are already stage 4 by the time of diagnosis. This includes rare cancers. [Happened to a 3x vaxed friend. Stage 4 colon and liver cancer](#) and Myelofibrosis.

Yes one grad student at UPenn. Turbo cancer after having part of her intestine or colon removed. She said she and her study group knew right away something was wrong. They felt it also created cognitive impairment and they couldn't think or discuss intellectual ideas as well.
- 

Watch & Pray † @BitsOfWhitt · Feb 20

Q Will Rescue The Little Ones! @eloveskids · Jan 2

A friend of mine — disabled, can't walk or focus. 2 ppl dead of "turbo cancer" —Both in early 40's. plus one young man dying of aggressive colon cancer, in his early 30's

What is the mechanism underlying Turbo Colon Cancer?

The underlying mechanism of turbo cancer is most likely some type of COVID-19 vaccine induced immune system suppression that gives rise to rapidly growing and rapidly progressive cancers of the breast, lung, colon, gastric, gallbladder, pancreas, brain,

lymphoma, leukemia and so on.

There are a number of theories in regards to what is causing COVID-19 vaccine induced immune system dysfunction: TLR suppression, T-cell dysfunction, IgG4 shift, DNA contamination of mRNA vials with plasmids containing SV40 promoter, p53 inhibition, PD-L1 elevation, NK cell exhaustion and many more.

Hopefully, one day we will figure out the specific mechanism causing these very aggressive cancers, which will then give us better ideas about treatment, because turbo cancers seem to be highly resistant to conventional cancer treatments.

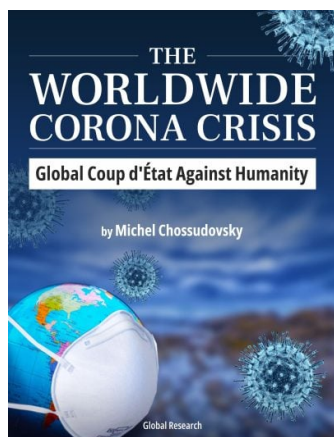

But in the meantime, turbo colon cancers are killing people with a typical timeframe of two to four months from onset of symptoms until death.

Even the best oncologists in the world are not equipped to deal with something like this.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow

human beings and our children worldwide. Truth is a powerful instrument."
