This important article by Peter Koenig was first published on February 9, 2023, in the immediate wake of the earthquake. It was updated on February 22, 2023, following the testimony of Serdar Hussein and on September 16, 2023 in relation to recent extreme climatic events including the earthquake in Morocco, the floods in Libya, the wildfires in Hawaii.

Author's Introductory Note

While there is no absolute proof that the 6 February 2023 (7.8 Richter) earthquake was manmade, caused by ENMOD / HAARP technologies (Environmental Modification / High-frequency Active Auroral Research Program), more than circumstantial evidence is growing that we are living in a geoengineering war – where weather and climate are manipulated by highly sophisticated technologies – which are also able to create earthquakes – and are presented as “climate change”.

[The recent – 8 September 2023 – seism \(6.8\) – in Morocco](#) has characteristics similar to the ones of the February 2023 Turkey quake.

In addition, for those who are still believing the CO2-manmade “climate change” narrative, please consider the extreme weather conditions, the historic September monster-floods killing thousands of people in Libya, a country destroyed in 2011 by France, US, and NATO – which also lynched their leader, Muammar Gaddafi, who wanted to free Africa from the French, UK, and US predators, with a common African currency, the Gold Dinar.

Also look at extreme heatwaves in China in July 2023, followed by extreme flooding, never recorded in known history, as well as the simultaneous hurricanes hitting the southern Chinese East Coast.

The destruction of Lahaina, the capital of Maui, Hawaii, also the seat of the Hawaiian Kingdom, through Directed Energy Weapons (DEW), capable of generating electromagnetic blueish laser-type beams with temperatures of up to 6000 degrees C, literally blowing up buildings, melting cars, but leaving trees intact, killing possibly thousands of people. All make-believe “climate change”.

We, the People, must open our eyes to these realities and the lies from the small but powerful financial-digital-military elite dominating the mainstream with daily misinformation.

Peter Koenig, September 16, 2023

Update. The Testimony of Serdar Hussein, the Head of the Turkish Space Agency

Waking-up is a conscientious trigger that must occur in the soul of each one of us to save humanity and our civilization.

The conclusion of "No Evidence So Far" in the title referred to the strong suspicion that this horrendous quake was the result of an ENMOD engineered disaster. (Environmental Modification Techniques). Up to this day it killed more than 48,000 people, injured more than half a million, and still tens of thousands are missing.

Will there ever be justice?

Will the presumed perpetrators be brought to trial?

The "no evidence" statement is wearing thinner and thinner, especially, when listening to Serdar Hussein, the Head of the Turkish Space Agency talking on Russian TV.

He uses hyperbolic emblematic speech, when talking about the hard titanium alloy material being launched to the Earth. It refers to using the titanium alloy rods to send these deadly, super-power beams of energy to earth, deep into the ground to cause the earthquake:

Transcript (Translation)

[The head of the Turkish Space Agency, Serdar Hussein Yildirim](#), on weapons capable of causing earthquakes:

You know those power poles on the streets. They are similar to these pillars, about 8-10 meters high. Metal rods.

There is nothing inside the rod, no explosives, nothing, but it's a metal rod made of a hard titanium alloy material.

They put them in a satellite. A certain amount of. And then they aim and launch them to Earth. It's like a stick with a sharp point. For example, God forbid, it falls somewhere, we will not name the disaster scenario now, but as soon as it falls to the ground, it penetrates up to 5 km deep into the earth.

This happens very quickly and creates an earthquake of magnitude 7-8.

As a result of the impact, everything that is there will be destroyed. Look, there are no weapons here, no explosives, no bombs, nothing like that. Simple sticks [rods]. But there is such a force that comes from outer space, and you have no chance to see it, stop it, or defend yourself."

[See video here](#)

Serdar Hussein's statement remains to be verified.

According to Turkey's President Recep Tayyip Erdogan "More than 13 million people have been affected by the devastating earthquake in Turkey." (quoted by Tass, February 7, 2023)

"The earthquake has caused colossal damage. It was the biggest-ever calamity not only in our country's history but in the history of the entire world," Erdogan was quoted telling local television channels.

"We are living through the most painful days in our history. Two powerful earthquakes, with the epicenters in Pazarcik and Elbistan in Kahramanmaras, [close to the city of Gaziantep] have caused large-scale damage in ten provinces. Around 13.5 million [out of 85 million Turkish population] of our citizens have been affected on these territories," he said.

Early Monday morning at around 4 AM on February 6, 2023, a massive 7.8 magnitude earthquake rocked southeast Turkey and Syria. According to the US Geological Survey, the earthquake's epicenter hit an area about 30 km from Gaziantep (2.1 million population), a major city and provincial capital 100 km from the Syrian border. The quake was centered about 18 km deep.

It was followed by a strong 6.7 magnitude aftershock about 10 minutes later. Read more [here](#). See also NY Post drone video below of some of the devastated areas.

The death toll from the earthquake so far exceeds 5,400, and some 32,000 people were injured. This is only after day two, when most of the destruction and rubble has not yet been searched for survivors or bodies.

The earthquake also hit northern Syria, leaving so far at least 1,200 deaths and thousands of injured. (See 2 google maps to the left).

By comparison, the 1960 Chile earthquake hitting the Santiago area was one of the most devastating tremors in recent history, killing some 1,700 people, plus the ensuing tsunami with a death toll of between 2000 and 2,500, and tens of thousands of injured.

A Gigantic Act of Terror?

If President Erdogan is right, that this is one of the world's largest calamities ever – and it looks very much like he is right – wars notwithstanding, is this an act of terror?

What has Turkey done to elicit such a devastating reaction – by whom?

The US of A? NATO, which as far as command goes is also Washington and the Pentagon?

A few recent initiatives by Turkey – a key member and heavy-weight of NATO for her strategic geographic location between east and west – may have provoked the wrath of her NATO allies.

Not necessarily in order of priority:

1. Turkey has entered an alliance with Russia – which for a NATO-member is like “[*sleeping with the enemy*](#)”. (Michel Chossudovsky) See [this](#) and [this](#). Such a partnership with a NATO enemy is indeed an absolute no-go for the west.
2. Under this alliance, Turkey has decided to buy the Russian S-400 Air Defense system, instead of the US Patriot system, as it would behoove for a NATO member, especially one as crucial as is Turkey. Patriot (standing for *Phased Array Tracking Radar for Intercept on Target*) is a surface-to-air missile and anti-ballistic system. It is NATO’s air defense system. Instead, Turkey’s decision for the more sophisticated, more precise and effective Russian S-400 is a strong backbone for her alliance with Russia.
3. President Erdogan brokered in 2017 a US\$ 2.5 billion deal with President Putin for the S-400. First deliveries of the S-400 missile batteries arrived in 2019.
4. The S-400 system is said to pose a risk to the NATO alliance as well as the F-35, America’s most expensive weapons platform. Turkey was severely sanctioned at the time by President Trump, notably by a foreign-manipulated currency devaluation of the Turkish Lira – which had a devastating impact on Turkey’s economy. It is unusual, almost unheard of, for Washington to “punish” a NATO member for misbehavior.
5. US warship USS Nitze barred from entering the Black Sea through the Turkish controlled Bosphorus. According to [USNI News](#), the US warship USS Nitze, a US destroyer, was spotted in early February 2023, operating near the Black Sea. It is said to be the closest a US warship has come to Russia since Putin’s invasion of Ukraine began.
6. On February 3rd, the Nitze was seen at the lower edge of the Bosphorus Strait, *en route* to a port call in Turkey. The last US warship to pass through the strait was the USS Arleigh Burke (DDG-51), which left the Black Sea on December 15, 2021. See Google map below, followed by video on the USS Nitze

7. In February 2022, Turkey closed the Bosphorus passage from the Mediterranean to the Black Sea for all vessels which do not have a national port within the Black Sea. This means, US war ships are not allowed to cross from the Med-Sea through the Bosphorus into the Black Sea, from where Russia may be vulnerable for cruise missiles from US destroyers, for example the USS Nitze. In the meantime, *Nitze* has scheduled a port call at Gölcük Naval Base, in the Sea of Marmara (see Google map above).

8. Turkey, a key NATO country, between East and West, with the crucial Bosphorus as the dividing line, is closing a critical strategic passage to her NATO ally – NATO commander – protecting Russia, the US enemy – may not be seen with joy by Washington.

9. Turkish – Syrian rapprochement, is certainly not what Washington wants. It is the latest development in regional surprises, as reported by Arab Center Washington DC – see [this](#).

10. Turkish President Recep Tayyip Erdogan's interest in a rapprochement with Syrian President Bashar al-Assad is the latest chapter in his delicate domestic and regional balancing act, and it has his friends and enemies alike, especially the US, scrambling for how this development might impact them. The rapprochement, if it succeeds, would further complicate the domestic and regional dynamics in northern Syria without securing any clear advantage for Erdogan beyond, perhaps, in the upcoming Turkish elections.

11. Remember the Russian Involvement in Syria – when the US was chased out of

Syria? At the request of President Bashar al-Assad – Russian military, mostly air force interference from September 2015 until the end of 2017, was largely responsible for Washington's significant withdrawal, albeit not complete, from Syria. In 2017, when "mission accomplished", Russian combat troops were withdrawn, but Russia keeps a nominal military police presence in Northern Syria.

12. Turkey's Bombshell – a few days ago, rejecting Sweden as NATO member, may have been the proverbial straw that broke the camel's back. For a new country to become a NATO member, ALL NATO nations must approve the new candidate.

13. Sweden says they cannot meet some of the Turkish conditions. Among them are Turkey's accusations that Sweden is supporting members of the Kurdish Working Party – the PKK, archenemies of Erdogan's.

14. According to a Turkish Crisis Group, some 30,000 to 40,000 people are estimated to have died in fighting between the PKK and Turkish government, since 1984.

15. Maybe there were also some Russian interests at stake in Turkey's rejection of Sweden as a NATO member. Although peace has prevailed between Sweden and Russia, since 1809, the two countries never achieved a close relationship, unlike the situation with other neighbors. This is particularly the case with the current Swedish Government.

Turkish General Elections on 14 May 2023.

If the timing of the earthquake was part of a plan, it would fit perfectly into the coming General Elections on 14 May 2023. President Erdogan and his Justice and Development Party (AK Party), are currently not doing well in popularity polls.

Depending on his dealing with the consequences of the earthquake, he and his Party may gain or lose in approval ratings. Usually, „natural“ disasters do not bode well for the governments in place, regardless of whether they bear any responsibility.

In any case, new elections bring new "opportunities". In the meantime, it is clear to most analysts, that no elections are truly "democratic" – that there is literally no election in the world in which the decisive vote – the decisive influence – is not exerted by the Anglosaxon western empire.

Replacing Erdogan with a US stooge, might bring Turkey back as the desired all obedient NATO country, no alliance with Russia, no more "sleeping with the enemy".

Is it a coincidence that just a few days after Turkey rejected Sweden's candidacy for NATO membership, a massive, deadly and all-destructive earthquake hits Turkey, with serious ramification for Syria, and even impacting on Cyprus and Lebanon.

Was The Earthquake the Consequence of A Terror Attack? No Evidence

Artificial earthquakes have been prompted before. For example, the 12 January 2010 earthquake off Port-au-Prince, capital city of Haiti, is suspected having been prompted by underwater / underground explosions, in order to bring huge oil reserves lodged largely around the shores of the Caribbean Sea, closer to the surface to be easier accessible and exploitable. William Engdahl's "Strategic denial of oil in Haiti?" points clearly in this

direction.

F. William Engdahl says Geo-physics suggest there could be massive oil and mineral deposits in and off-shore Haiti. See this 9-min video from 30 January 2010.

The US Air Force's Weather Warfare

Weather-modification, according to the US Air Force document AF 2025 Final Report, "offers the war fighter a wide range of possible options to defeat or coerce an adversary":

'Weather modification will become a part of domestic and international security and could be done unilaterally... It could have offensive and defensive applications and even be used for deterrence purposes. The ability to generate precipitation, fog and storms on earth or to modify space weather... and the production of artificial weather all are a part of an integrated set of [military] technologies.'

Study Commissioned by the US Air Force: [Weather as a Force Multiplier, Owning the Weather in 2025](#), August 1996

The High Frequency Active Auroral Research Program (HAARP)

The US Air Force's "Weather Warfare" is related to The High Frequency Active Auroral Research Program (HAARP) which was developed in the early 1990s.

A [scientific report](#) (HAL Id: [hal-01082992](#)) regarding HAARP (2011, 2014) explains that high-power ELF radiation generated by modulated HF heating of the ionosphere could cause Earthquakes, Cyclones and localized heating. The paper by Fran De Aquino Maranhao summarized the scientific findings as follows:

"HAARP is currently [2014], [the project was closed in Gakona, Alaska and transferred in 2014] the most important facility used to generate extremely low frequency (ELF) electromagnetic radiation in the ionosphere. In order to produce this ELF radiation, the HAARP transmitter radiates a strong beam of high frequency (HF) waves modulated at ELF.

This HF heating modulates the electrons' temperature in the D region ionosphere and leads to modulated conductivity and a time-varying current which then radiates at the modulation frequency. Recently, the HAARP HF transmitter operated with 3.6GW of effective radiated power modulated at frequency of 2.5Hz. It is shown that high-power ELF radiation generated by HF ionospheric heaters, such as the current HAARP heater, can cause Earthquakes, Cyclones and strong localized heating."

The patents used to develop the HAARP program are owned by Raytheon through its E-Systems subsidiary.

It should be noted that with the closing down of The High-frequency Active Auroral Research Program (HAARP) program in Gakona, Alaska in 2014 for another location, the Pentagon's Defense Advanced Research Projects Agency (DARPA) has been actively involved in ENMOD research, most of which is classified. See [this](#)

At the time of writing, there is suspicion, but no concrete evidence that the Turkey-Syria Earthquake was an Act of Terror, triggered by Environmental Modification Techniques.

The above statements remain to be fully ascertained.
